LETTER OF TRANSMITTAL

*To His Excellency, THE HONORABLE EARL WARREN,
Governor of the State of California.*

SIR: I have the honor to herewith transmit Bulletin No. 132 of the Division of Mines, of the Department of Natural Resources, being the annual report of the statistics of the mineral production of California.

The remarkable variety, total values, and wide distribution of many of our minerals revealed herein show California's importance as a producer of commercial minerals among the states of the Union.

Respectfully submitted.

WARREN T. HANNUM,
Director of Natural Resources.

INTRODUCTION

It is the endeavor of the staff of the State Division of Mines (formerly State Mining Bureau), in these annual reports of the mineral industries of California, to so compile the statistics of production that they will be of actual use to producers and to those interested in the utilization of the mineral products of our State, while at the same time keeping the individual's data confidential. In addition to the mere figures of output, we have included descriptions of the uses and characteristics of many of the materials, as well as a brief mention of their occurrences.

The compilation of accurate and dependable figures is an extremely difficult undertaking, and the State Mineralogist takes the opportunity of here expressing his appreciation of the cooperation of the producers in making this work possible. A fuller appreciation of the value of early responses to the requests sent out in January will result in earlier completion of the manuscript. Statistics lose much of their value if their publication is unnecessarily delayed.

Some of the data relative to properties and uses of many of the minerals herein described are repeated from preceding reports, as it is intended that this annual statistical bulletin shall be somewhat of a compendium of information on California's commercial minerals and their utilization.

WALTER W. BRADLEY,
State Mineralogist.

MINERAL INDUSTRY, CALIFORNIA, 1944

DATA COMPILED FROM DIRECT RETURNS FROM PRODUCERS IN ANSWER TO INQUIRIES SENT OUT BY THE CALI- FORNIA STATE DIVISION OF MINES, FERRY BUILDING, SAN FRANCISCO, CALIFORNIA

CHAPTER ONE

The total value of the mineral output for California for the year 1944 was \$469,774,525, being an increase of \$43,329,245 over the total of 1943 which was \$426,445,280. The increase was due to stimulated output owing to war demand. There were sixty-two different mineral substances, exclusive of a segregation of various stones grouped under gems; all fifty-eight counties of the State contributing to the list.

As revealed by the following, the salient features of 1944 as compared with the previous year were: Increases in total value were registered by such groups of mineral substances as fuels, industrial materials, and salines, while the metals and structural materials showed a decline in total value. The value of the year's mineral output, being the largest of any on record, was due chiefly to the unprecedented war-time demand for petroleum and to the amount of natural gas utilized. The greatest annual amount and value for their output in California were registered by bromine, dolomite, gypsum, iron ore, limestone, lithia, manganese ore, natural gas, potash, pyrite, silica (quartz and glass sand), soda (soda ash and salt-cake), soapstone and talc. Petroleum and salt registered their greatest annual yield, and gold the smallest output since 1848, the year of its discovery.

Of the fuels, petroleum increased from 284,145,702 barrels, valued at \$289,323,406 in 1943, to 311,717,804 barrels, valued at \$330,659,802, an increase of 9.7 percent in amount and 14.2 percent in value. The 1944 output of crude oil was the largest on record but was exceeded in value by that of 1926 when the barrel value was \$1.538 compared with \$1.061 in 1944. Natural gas utilized increased from 443,219,847 M cu. ft., worth \$28,046,729 in 1943, to 467,743,258 M cu. ft., valued at \$31,797,418, and was the largest annual consumption in this State.

Of the metals, an increase in annual value was recorded by copper, lead, manganese ore, silver, and zinc; all others showed a decline in amount and value from 1943. The value of the gold yield decreased from \$5,191,480 in 1943 to \$4,108,055, which was the smallest of any year since 1848, the year gold was discovered in California. Copper increased from 17,172,440 lbs., worth \$2,232,417 in 1943, to 25,584,865 lbs. worth \$3,453,957; manganese ore increased from 25,729 long tons, worth \$957,317, to 30,263 long tons, worth \$1,098,555; and zinc increased from 5,170,627 lbs., worth \$558,427, to 16,456,103 lbs., worth \$1,875,996; while chromite decreased from 56,201 long tons, worth \$2,334,838 to 27,900 long tons valued at \$1,190,513; quicksilver decreased from 33,948 flasks, worth \$6,177,159, to 28,097 flasks, worth \$3,178,969; and tungsten ore from 254,118 units, worth \$5,910,745, to 203,965 units, valued at \$4,835,810.

Of the structural materials, the group as a whole decreased from a total value of \$55,055,016 in 1943 to \$50,777,220, although increases in value were registered by granite, marble, sandstone, slate, and miscellaneous stone. Miscellaneous stone increased from a total value of \$21,716,223 to \$25,138,003, while cement decreased from 18,515,085 barrels worth \$27,865,466 in 1943, to 14,599,752 barrels, worth \$21,249,520, and brick and hollow building tile decreased from a total value of \$4,368,675 to \$3,930,662.

Of the industrial materials, the group as a whole increased in total value from \$10,656,288 in 1943 to \$11,515,327 in 1944 with all of the more important materials showing an increase in value for the year but diatomite and mineral water, both of which registered a decline.

By Substances

The following table shows the comparative yield of mineral substances of California for 1943 and 1944, as compiled from the returns received at the State Division of Mines, San Francisco, in answer to inquiry sent to producers:

Substance	1943		1944		Increase + Decrease— Value
	Amount	Value	Amount	Value	
Bentonite.....	11,480 tons	\$118,257	25,581 tons	\$180,065	\$61,808+
Borates.....	216,687 tons	4,953,174	234,860 tons	5,264,864	311,690+
Brick and hollow building tile.....		4,368,675		3,930,662	438,013—
Carbon dioxide.....	227,424 M cu. ft.	248,126	*	*	+
Cement.....	18,515,085 bbls.	27,865,466	14,599,752 bbls.	21,249,520	6,615,946—
Chromite.....	56,201 long tons	2,334,838	27,900 long tons	1,190,513	1,144,325—
Clay (pottery).....	622,019 tons	1,185,240	491,363 tons	1,241,652	56,412+
Copper.....	17,172,440 lbs.	2,232,417	25,584,865 lbs.	3,453,957	1,221,540+

Zinc.....	5,170,627 lbs.	558,427	16,456,103 lbs.	1,875,996	1,317,569+
Unapportioned..... ^c		10,546,786	^d	10,251,752	295,061—
Total value.....		\$426,445,280		\$469,774,525	
Net increase.....					\$43,329,245

* Included under 'Unapportioned.'

^b Includes macadam, crushed rock, ballast, rubble riprap, sand and gravel.

^c Includes asbestos, barite, bituminous rock, bromine, calcium chloride, coal, diatomite, feldspar, iodine, lithia, magnesite, mineral paint, molybdenum ore, platinum group metals, potash, pyrite, sandstone, sillimanite group, slate, paving blocks, tube-mill pebbles, strontium, titanium.

^d Includes antimony, asbestos, barite, bituminous rock, bromine, cadmium, calcium chloride, carbon dioxide, coal, diatomite, feldspar, fluor spar, gems, iodine, lithia, magnesite, marble, mica, mineral paint, molybdenum ore, potash, pyrite, sandstone, sillimanite group, slate, strontium, tin, titanium, tube-mill pebbles.

The salines group increased in total value from \$15,660,400 in 1943 to \$20,983,104 with borates, bromine, magnesium salts, potash, salt, and soda (soda ash and salt-cake), showing increases in amount and value, and only calcium chloride and iodine showing a decreased output.

By Counties

The following table shows the comparative value of the mineral production of the various counties in the State for the years 1943 and 1944:

County	1943	1944
Alameda.....	\$5,336,917	\$8,089,026
Alpine.....	20,241	2,214
Amador.....	534,098	283,206
Butte.....	755,968	929,239

Total Mineral Production of California, by Years, Since 1887

The following tabulation gives the total value of mineral production of California by years since 1887, in which year compilation of such data by the State Mining Bureau (now Division of Mines) began. At the side of these figures have been placed the values of the most important metal and nonmetal items—gold and petroleum.

In the same period copper made an important growth beginning with 1897 following the entry of the Shasta County mines, and later Plumas County. Cement increased rapidly from 1902, while crushed rock, sand and gravel as a group paralleled the cement increase. Quick-silver has been up and down. Mineral water and salt have always been important items, but the values fluctuate. Borax has increased materially since 1896. War-time increases, 1915-1918, were shown by chromite, copper, lead, magnesite, manganese, silver, tungsten and zinc. Most of these later declined, though silver, structural materials and copper increased in 1920-1924. Natural gas showed a steady increase from 1907, and in 1928-1934, also in 1943-1944, its value was second only to petroleum. In 1939-1944 increases in output similar to those of 1915-1918 were shown by many mineral substances.

In 1929 the output of gold was the smallest of any year since its discovery, up to that time. From 1930 to 1940 there was a rapid increase in gold production, due in part to the raise in price per ounce, then from 1941 to 1944 the sharpest decline in the gold yield with the smallest annual production in 1944.

Total Mineral Production of California, by Years, Since 1887

Year	Total value of all minerals	Gold, value	Petroleum, value
1887	\$19,785,868	\$13,588,614	\$1,357,144
1888	19,469,320	12,750,000	1,380,666
1889	16,681,731	11,212,913	368,048
1890	18,039,666	12,309,793	384,200
1891	18,872,413	12,728,869	401,264

CHAPTER TWO

FUELS

Among the most important mineral products of California are its fuels. This subdivision includes coal, natural gas, and petroleum, the combined values of which make up practically 77 per cent of the State's entire mineral output for the year 1944.

There are deposits of peat known in several localities in California, small amounts of which are used as a fertilizer, and in stockfood preparations, but none has yet been recorded as utilized for fuel.

Comparison of values during 1943 and 1944 is shown in the following table:

Substance	1943		1944		Increase+ Decrease— Value
	Amount	Value	Amount	Value	
Coal*					
Natural gas	443,219,847 M cu. ft.	\$28,046,729	467,743,258 M cu. ft.	\$31,797,418	\$3,750,689+
Petroleum	284,145,702 bbls.	289,323,406	311,717,804 bbls.	330,659,802	41,336,396+
Total values		\$317,370,135		\$362,457,220	
Net increase					\$45,087,085

* Concealed under 'Unapportioned.'

COAL

Bibliography: State Mineralogist Reports VII, XII-XV (inc.), XVII, XIX-XXVIII (inc.), XXVI, XXXI, XXXV, XXXVII, U. S. Geol. Surv., Bulletins 285, 316, 421, 431, 471, 581; Ann. Rept. 22, Pl. III.

The coal produced in California during 1944 is concealed under the 'Unapportioned' item so as not to reveal the output of a single producer in Amador and Trinity counties. The 1943-1944 total production amounted to 219 net tons valued at \$1,721 f.o.b. mine. This coal was consumed by the local market and also used on the property for camp purposes, power and forge, to carry on regular operations and development work.

Total Coal Production of California

The very considerable output of coal in the years previous to 1883 was almost entirely from the Mount Diablo district, Contra Costa County. Later the Tesla mine in Corral Hollow, Alameda County, was an important producer for a few years. Stone Canyon, Monterey County, was also an important producer for a short time, and there has been some coal shipped from properties in Amador, Fresno, Orange, Riverside, Siskiyou and Trinity counties. The following tabulation gives the annual tonnages and values, according to available records:

Coal Output and Value, by Years

Year	Tons	Value	Year	Tons	Value
1861	6,620	\$38,065	1903	93,026	\$265,383
1862	23,400	134,550	1904	79,062	376,494
1863	43,200	248,400	1905	46,500	144,500
1864	50,700	291,525	1906	24,850	61,600
1865	60,530	348,048	1907	23,734	55,849
1866	84,020	483,115	1908	18,496	55,503
1867	124,690	716,968	1909	49,389	216,913
1868	143,676	826,137	1910	11,033	23,484
1869	157,234	904,096	1911	11,047	18,297
1870	141,890	815,868	1912	14,484	39,092

1885	71,615	286,460	1927	200	1,100
1886	100,000	300,000	1928	782	4,542
1887	50,000	150,000	1929	450	2,476
1888	95,000	380,000	1930	10,885	59,858
1889	121,280	288,232	1931	12,551	77,607
1890	110,711	283,019	1932	9,508	36,468
1891	93,301	204,902	1933	2,612	11,367
1892	85,178	209,711	1934	13,549	52,720
1893	72,603	167,555	1935	8,049	32,745
1894	59,887	139,862	1936	370	1,815
1895	79,858	193,790	1937	269	2,933
1896	70,649	161,335	1938	275	1,650
1897	87,449	196,255	1939*	1,750	8,100
1898	143,045	337,475	1940		
1899	160,941	420,109	1941*	190	1,046
1900	176,956	535,531	1942		
1901	150,724	401,772	1943*	219	1,721
1902	88,460	248,622	1944		
			Totals	5,270,009	\$23,399,506

The tonnages in the above table for the years 1861-1866 (incl.) are taken from the U. S. Geological Survey, "Mineral Resources of the U. S., 1910," p. 107. The values assigned for the years previous to 1883 are those given by W. A. Goodyear (Mineral Res., 1882, pp. 93-94), being an average of \$5.75 per ton. From 1887 to date the figures are those of the California State Mining Bureau.

* Annual details concealed under 'Unapportioned.'

NATURAL GAS

Bibliography: State Mineralogist Reports VII, X, XII, XIII, XIV, XXIX, XXXVII. Bulletins 3, 16, 19, 69, 73, 89, 118. Summary Oil and Gas Supervisor, Dec., 1919; Aug., 1922; Mar., 1923; Mar. and Apr., 1926.

Statistics on the production of natural gas in California are in a considerable degree difficult to arrive at, as much of it that is utilized directly at the wells for heating, lighting, and driving gas engines is not measured. Hence, it is necessary to approximate the output of many of the operators in the oil fields, estimated on the number of lights, and on the number and horsepower of gas engines and steam boilers thus operated. The figures here given are for gas utilized locally and also that sold for distribution to consumers; and we consider are not over-estimated, particularly in the seven oil-producing counties. It must be remembered that some of our important oil fields are removed many miles

from the site of any other industry, and that the gathering of small amounts of gas and transporting it for any considerable distance may not always be profitable, nor is it often possible to have pipe-line facilities available to handle the gas accompanying the early gas production in newly developed fields. Wherever feasible, casing-head gas is used in driving gas engines for pumping and drilling, and in firing the boilers of steam-driven plants.

Production and Value

During 1944 there were 467,743,258 M. cu. ft. of natural gas, worth \$31,797,418, produced and utilized (sold or used) in California as reported to the Division of Mines, compared with 443,219,847 M. cubic feet, valued at \$28,046,729 in 1943. The 1944 output of utilized natural gas was the largest annual yield on record in this State. Distribution by counties of natural gas utilized (sold and used) in 1944 was as follows:

Utilized Production of Natural Gas in California, 1944

County	M cubic feet	Value
Fresno.....	32,686,565	\$2,836,676
Kern.....	72,111,360	3,768,075
Kings.....	63,648,158	3,294,746
Los Angeles.....	52,806,375	3,843,357
Orange.....	16,704,577	1,119,308
Sacramento.....	72,644,058	5,490,344
San Joaquin.....	11,337,469	798,908
Santa Barbara.....	5,901,658	389,032
Solano.....	70,526,204	5,872,446
Ventura.....	53,179,388	3,245,920
Contra Costa, Humboldt, Glenn, Madera, Mendocino, Stanislaus, Sutter, Tulare, Yolo*	16,197,446	1,138,606
Totals.....	467,743,258	\$31,797,418

* Combined to conceal outputs of individual operators in each.

Increases in amount of utilized natural gas over 1943 were reported in Contra Costa, Kern, Orange, Sacramento, Santa Barbara, Solano, Tulare and Ventura counties; while decreases were registered by Fresno, Kings, Los Angeles, and San Joaquin counties. Los Angeles County which led in quantity output from 1922 to 1942 though exceeded in value only in 1943 by both Sacramento and Solano counties, was passed in both amount and value in 1944 by Sacramento and Solano counties; and in amount only, by Kern, Kings and Ventura counties.

There is a rather wide variation in prices quoted for natural gas because a considerable part is used directly in the field for driving gas engines and firing boilers, and is therefore not measured nor sold. Such companies as have placed a valuation on the gas that was thus used in 1943 gave from 1.5¢ to 35¢ per 1000 cu. ft. at the well. From the totals shown in the tabulation following herein, the average value for all fields in 1942 works out at approximately 6.33¢ per M cu. ft. Approximately 7000 cu. ft. of gas is equal to one barrel of oil in heating value, and is so accounted for by many operators. In driving gas engines, about 4000 cu. ft. per 24 hr. are consumed by a 25-h.p. engine, and 63,700 cu. ft. per day for heating a 70-h.p. steam boiler, which figures have been utilized in compiling this report, in those cases where gas was not metered.

Natural Gas Production in California Since 1888

The production of natural gas in California by years since 1888 is given in the following table. The first economic use of natural gas in California was from the famous courthouse well at Stockton, bored in 1854-1858. Beginning about 1883 and for several succeeding years, a number of gas wells were brought in around Stockton, and later at Sacramento. Natural gas was known in a number of other localities, and occasionally utilized in a small way, notably at Kelseyville in Lake County, and in Humboldt County near Petrolia and Eureka, but there are no available authentic records of amounts or values previous to the year 1888. The most important developments in the commercial production of natural gas have been coincident with developments in the oil fields, by utilizing the casing-head gas as well as that from dry-gas wells, the most recent from the latter being in Solano and Sacramento counties.

Natural Gas Production in California Since 1888

Year	M cubic feet	Value	Year	M cubic feet	Value
1888	^a 12,000	\$10,000	1917	44,343,020	\$2,964,922

Gasoline from Natural Gas

More or less gas usually accompanies the petroleum in the oil fields, and such gas carries varying amounts of gasoline. A total of 80 plants were in operation in 1944 recovering gasoline by compression or absorption from this 'casing-head' gas. After the gasoline is extracted the remaining 'dry gas' so far as practicable is taken into pipe lines, by which it is distributed to consumers, both domestic and commercial.

Natural gas gasoline produced during 1944 was reported from all fields by 80 plants; a total of 610,904,480 gallons valued at \$27,565,477,

as compared with 528,771,009 gallons valued at \$21,968,165 from 84 plants in 1943. In 1944 there was also a total of 118,100,084 gallons of liquefied petroleum gases, valued at \$2,857,168, as compared with 90,732,022 gallons worth \$2,238,954, as reported in 1943.

Natural Gas Gasoline and Liquefied Natural Gas for 1944

County	Natural gas gasoline		Liquefied natural gases	
	Gallons	Value	Gallons	Value
Fresno and Kings-----	110,569,253	\$4,670,432	52,194,405	\$1,304,860
Kern-----	79,502,488	3,691,683	36,553,269	840,725
Los Angeles-----	253,740 087	11,865,547	6,489,291	162,232
Orange-----	63,015,672	3,031,807	6,441,150	161,029
Santa Barbara-----	17,794,395	705,617	2,792,052	61,425
Ventura-----	86,282,585	3,600,391	13,620,717	326,897
Totals-----	610,904,480	\$27,565,477	118,100,084	\$2,857,168

The usual recoveries of gasoline from natural gas vary from $\frac{1}{2}$ gal. to 3 gal. per 1000 cu. ft. of gas handled, the average being about 1 gal. per 1000 cu. ft. The U. S. Bureau of Mines Report by Knudsen¹ gives the average recovered for 1944 as 1.598 gallons per 1000 cubic feet of gas treated. His figures show the following production by methods:

	M cubic feet natural gas treated	Gallons of gasoline recovered	Recovery gallons per M cubic feet
Oil absorption-----	395,859,605	632,768,352	1,598

PETROLEUM

Bibliography: State Mineralogist Reports IV, VII, X, XII, XIII, XXIX, XXXI, XXXIII-XXXV, XXXVII. Bulletins 3, 11, 16, 19, 31, 32, 63, 69, 73, 82, 84, 89, 118. Reports of Oil and Gas Supervisor 1915 to date (issued in monthly chapters since April, 1919, to June, 1929, and quarterly from then on.) U. S. Geol. Surv. Bulletins 213, 285, 309, 317, 321, 322, 340, 357, 398, 406, 431, 471, 541, 581, 603, 621, 623, 653, 691. Prof. Papers 116, 117. "American Petroleum; Supply and Demand"; Amer. Petr. Inst., 1925.

The crude petroleum produced in California during 1944 amounted to a total of 311,717,804 barrels, valued at \$330,659,802 at the well. This was the largest annual yield of crude oil ever reported in this State although the 1926 value exceeded that of 1944. The 1943 output was 284,145,702 barrels, worth \$289,323,406. The totals of quantity are compiled from monthly reports filed by the operators with the State Oil and Gas Supervisor. Values of crude oils were the same in 1944 as in 1943, but on the first of August subsidies were granted to producers in oil fields where the output per well per day was less than nine barrels.

The question of the value of the crude oil yield at the well is a difficult one to settle with exactitude principally because a large part of the output is not sold until after refining. The large refiners are also

¹ Knudsen, E. T., The Petroleum Situation in the Pacific Coast Territory (Monthly for 1944), U. S. Bureau of Mines.

large producers of crude oil which they send direct from well to plant, hence much of the crude oil is not sold as such.

The value used in the statistical reports of the State Mining Bureau and the Division of Mines from 1914 to 1927 (inc.) was derived from an average of actual sales of crude oil of all grades in each field of the State and their average applied to the total yield of each respective field. The 1929-1933 values, used by the Division of Mines, were obtained by using the production of crude oil by gravities produced in each field and applying an average of current price quotations for crude oil at the well as compiled by California Oil and Gas Association.

The values given to the 1934-1944 petroleum output by this department were obtained by using the average gravity oil for each field, to which was applied the average quotation for the year of said grade oil.

TABLE A
Production and Value of Crude Oil by Counties

County	1943		1944	
	Barrels	Value	Barrels	Value
Fresno-----	37,869,219	\$37,779,881	45,325,244	\$46,159,669
Kern-----	84,934,943	86,174,973	92,694,311	98,829,308
Kings-----	10,326,575	12,907,422	9,459,556	10,689,298
Los Angeles-----	87,983,756	90,193,521	88,646,069	95,872,140
Orange-----	26,441,558	26,325,466	30,417,719	31,227,748
Santa Barbara-----	16,285,344	13,523,527	21,298,935	21,012,512
Ventura-----	20,279,921	22,400,750	23,797,902	26,792,447
Other counties-----	^a 24,386	17,866	^b 78,068	76,680
Totals-----	284,145,702	\$289,323,406	311,717,804	\$330,659,802

(a) Includes San Bernardino, San Luis Obispo, Santa Clara, and Tulare counties.

(b) Includes San Luis Obispo and Santa Clara counties.

It will be noted in the above that all the major petroleum producing counties, with the exception of Kings County, showed an increase in output in 1944 over that of 1943. Kern County led all other counties in production, passing Los Angeles County which outranked Kern since 1923.

The foregoing totals showed an average price of \$1.061 per barrel for the year 1944, as compared with \$1.018 in 1943; \$0.980 in 1942, \$0.953 in 1941, \$0.929 in 1940, \$1.009 in 1939, \$1.038 in 1938, \$0.997 in 1937, \$0.986 in 1936, and \$0.870 in 1935.

TABLE B
Average Price of Oil per Barrel, by Counties, 1935-1944

County	1935	1936	1937	1938	1939	1940	1941	1942	1943	1944
Fresno-----	\$0.941	\$1.209	\$1.255	\$1.261	\$1.173	\$1.068	\$0.963	\$0.885	\$0.998	\$1.084
Kern-----	.729	.863	.886	.890	.826	.838	.878	0.894	1.015	1.066
Kings-----	1.045	1.338	1.390	1.390	1.430	1.262	1.217	1.250	1.250	1.130
Los Angeles-----	.914	.974	.968	1.064	1.064	.941	1.008	1.039	1.025	1.081
Orange-----	.898	.937	.945	.956	.952	.900	.901	1.055	0.996	1.027

Santa Barbara-----	.924	1.143	1.083	.974	.830	.620	.644	0.709	0.830	0.987
Santa Clara-----										
Ventura-----	.901	.971	1.050	1.102	1.090	1.087	1.102	1.129	1.105	1.121
State averages-----	\$0.970	\$0.986	\$0.997	\$1.038	\$1.009	\$0.929	\$0.953	\$0.980	\$1.018	\$1.061

For several years previous to 1919, the State average value per barrel at the well for crude oil as determined by the statistical returns was noted to practically coincide with the quotations during the same years for 23° gravity oil in the San Joaquin Valley fields. In 1919 and since, the average values have worked out at figures corresponding to quotations up to, in one year as high as 28° oil, due to the large yield of high-gravity oils from the new fields in the Los Angeles-Orange counties area.

TOTAL PETROLEUM PRODUCTION OF CALIFORNIA

The presence of oil seepages and springs in Los Angeles and Ventura counties was known and utilized in a small way early in the history of California. Some also was shipped to refineries at San Francisco from Santa Barbara and Humboldt counties. In the light of present-day developments, the following reference to the previous year's production of oil and its future prospects as expressed by the San Francisco Bulletin of January 8, 1866, is strikingly prophetic even though skeptical:

"It is possible that the small quantity received (40,000 or 50,000 gallons in 1865) may be the forerunner of many millions which will, at some future time, lubricate the wheels of commerce and set a trade at work excelling in variety any that has thus far been known on this coast. At present, however, we admit to being a little skeptical about the assumption of the astute Professor Silliman that California will be found to have more oil in its soil than all the whales in the Pacific Ocean."

According to Hanks,¹ in 1874 production amounted to 36 bbl. per day from natural flows in Pico Cañon (Newhall), and at Sulphur Mountain (Ventura County), the oil being of 32° gravity average.

"Work was commenced in Pico Canyon in 1875 by drilling three shallow wells with spring pole, all of which yielded oil at depths of from 90 to 250 feet. Actual work of development commenced with steam machinery in 1877."²

In 1877 Pico averaged 40-50 bbl. daily, and Ventura 80 bbl. daily. In 1878, there was some production (at 60 bbl. per day, for a time) from wells in Moody Gulch, near Los Gatos, Santa Clara County, the oil being of 46° Baumé.

The first wells in the Coalinga, Fresno County, and Summerland, Santa Barbara County, fields were drilled in 1890, but Coalinga did not make its influence felt conspicuously on the state's annual output until 1903. The Summerland yield never has been large. The Salt Lake field near Los Angeles began production in 1894 and in 1897 reached over a million barrels annually.

In the Kern County fields, the first well was drilled in Sunset in 1891, Midway in 1900, McKittrick in 1892, Kern River in 1899. The Sunset-Midway district attained a yield of over 4,000,000 bbl. in 1909, and over 20,000,000 bbl. in 1910. Kern River field produced over 3,000,000 bbl. in 1901.

The first well in the Santa Maria-Lompoc group, Santa Barbara County, was drilled in 1901, and the district advanced to a yield of over 3,000,000 bbl. annually in 1905.

The Whittier-Fullerton field in Los Angeles and Orange counties became an important factor in 1902. The Montebello field, Los Angeles County, was the conspicuous addition in 1918-1919; and Elk Hills, Kern County, with Huntington Beach and Richfield, Orange County,

¹ Hanks, Henry G., Report IV of State Mineralogist, p. 298, 1884.

² Idem, p. 301.

in 1920. In 1921, the new fields added were Long Beach and Santa Fe Springs, Los Angeles County; in 1922, Torrance field in Los Angeles County, and Wheeler Ridge field in Kern County; but the production from the large number of new wells started in these new Los Angeles County fields did not reach its peak until August and September, 1923. Dominguez (Compton) came in during 1923; followed by Rosecrans and Inglewood in 1924. Ventura recorded important additions to its producing area in 1925 and 1926. Seal Beach, Orange County, and Mt. Poso, Kern County, were the new fields added in 1926; Round Mountain, Kern County, and Rincon, Ventura County, were the new fields added in 1927; with Potrero in Los Angeles County, Elwood in Santa Barbara County and Kettleman Hills in Kings County in 1928.

During 1929 Playa del Rey was added to the oil fields in Los Angeles County, and more recently a number of others have been added in Fresno, Los Angeles, Kern, and Santa Barbara.

The effect of the advent of these various fields to the producing column will be noted in the tabulation herewith, by years:

Specific Gravity of Oils Produced

The proportion of heavy and light oil produced in the various fields is shown in Table E, following, for which we are indebted to the Standard Oil Company. Specific gravities in California range from 8° Baumé in the Casmalia field, Santa Barbara County, 65° in Helm field, Fresno County.

California crude oils are all essentially of asphalt base, with a few notable exceptions. In the following localities are wells yielding crudes containing both asphalt and paraffine constituents: Oil City field, Coalinga; a few deep wells in East Side field, Coalinga; a considerable part

of the Ventura County field; Western Minerals area, south of Maricopa; Wheeler Ridge, Kern County.

Oil in "Storage"

Field, refinery, pipe-line and tank-farm stocks of crude and refined products in the Pacific Coast¹ territory totaled 85,181,355 barrels on December 31, 1944, as compared with 96,504,698 barrels on December 31, 1943, with a total decrease in stock from the preceding year of 11,323,343 barrels. Table F gives a breakdown of stocks as of December 31, 1943 compared with December 31, 1944.

¹ American Petroleum Institute: Summary of California Oilfield Operation for December, 1944.

Utilization of California Crude Oil

Most of the crude oil produced in California is sent to storage reservoirs at tank farms near the oil fields and from these reservoirs by pipe lines to the refineries, the larger ones of which are located in the vicinity of Los Angeles and on San Francisco Bay.

During 1944 the crude oil consumed in California according to the U. S. Bureau of Mines¹ was 289,708,000 barrels sent to stills at the refineries; 5,007,000 barrels used for cracking; 24,627,000 barrels either consumed as fuel or added to residuum; there were no shipments of crude oil out of the State as such; also stocks were depleted by 10,852,000 barrels from 1943, compared with 1943 when 257,228,000 barrels were sent to the stills; 6,612,000 barrels were used for cracking; 20,785,000 barrels either were used as fuel or added to residuum; and stocks were depleted by 4,136,000 barrels, from the previous year.

The production of petroleum products during 1943 and 1944 is shown in Table G:

TABLE G

Commodity	1943 Amount in barrels	1944 Amount in barrels
Crude petroleum to stills.....	257,228,000	289,708,000
Crude petroleum used for cracking.....	6,612,000	5,007,000
Natural gas gasoline.....	13,886,000	15,066,000

Totals ^b	277,726,000	309,781,000
^a Includes heavy non-gasoline crude oil.....	20,785,000	24,627,000
^b Total of crude oil and natural gasoline.		

Operating Data

The following tabulation (Table H, page 30) is compiled from data published by the State Division of Oil and Gas,² semiannually, and here combined to show the entire year's operations for all fields. The districts are the geographical subdivisions as administered by that Division and which are outlined on the accompanying map.

It will be noted that the State average yield of oil per-well-per-day was 83.2 barrels for the first six months of 1944 and 80.1 barrels for the second. This is somewhat higher than the figures 41.3 barrels average for December derived from American Petroleum Institute data as shown in Table D, on a previous page, due in part at least, to the fact that the latter is on a full-time basis, whereas the Division's figures allow for shut-down time.

¹ Knudsen, E. T., The Petroleum Situation in the Pacific Coast Territory (monthly) 1944, U. S. Bureau of Mines.

² Summary of Operations—California Oil Fields: Division of Oil and Gas, Fifteenth Annual Report of State Oil and Gas Supervisor, Vol. 30, No. 1, Jan.-June, 1944, and No. 2, July-Dec., 1944.

Proved Oil Land

The total proved oil land and natural gas land in California as of December 31, 1944 was 233,497 acres; an increase of 12,745 acres during the year 1944, according to data furnished by the Division of Oil and Gas¹. The acreage as of December 31, 1943 and December 31, 1944, by counties, is given in the following Table I:

¹ Corrected figure.
² Includes 497 barrels formerly carried under Kern County.
³ Includes 5,445 barrels formerly carried under Kern County.
⁴ Gas wells omitted from totals.
⁵ Includes 100 acres in San Luis Obispo County, District No. 3.
⁷ Includes 133,241 barrels formerly carried under Kern County.
⁸ Includes 730 acres in Contra Costa County, District No. 3.

CHAPTER THREE

METALS

Bibliography: Reports of State Mineralogist I-XXXIX (inc.). Bulletins 5, 6, 18, 23, 27, 36, 50, 57, 76, 78, 85, 92, 95, 108. Spurr and Wormser, "Marketing of Metals and Minerals." See also under each metal.

The value of metals produced in California during 1944 amounted to a total of \$24,040,256, as compared with \$27,703,118 in 1943. Increases in total values over that of 1943 were registered by copper, iron ore, lead, manganese ore, silver, and zinc; all other metals decreased. The value of gold was exceeded by that of tungsten ore in 1944, and in 1943 by quicksilver and tungsten ore; previously it lead all metals in value of output.

A comparison of the 1943 output with that of 1944 is afforded by the following table:

Substance	1943		1944		Increase+ Decrease— Value
	Amount	Value	Amount	Value	
Chromite.....	56,201 long tons	\$2,334,838	27,900 long tons	\$1,190,513	\$1,144,325—
Copper.....	17,172,440 lbs.	2,232,417	25,584,865 lbs.	3,453,957	1,221,540+
Gold.....	148,328 fine ozs.	5,191,480	117,373 fine ozs.	4,108,055	1,083,425—
Iron ore.....	907,458 tons	2,341,827	905,981 tons	2,360,694	18,867+
Lead.....	11,811,034 lbs.	885,827	11,408,381 lbs.	912,670	26,843+
Manganese ore.....	25,729 long tons	957,317	30,263 long tons	1,098,555	141,238+
Quicksilver.....	33,948 flasks	6,177,159	28,097 flasks	3,178,969	2,998,190—
Silver.....	609,075 fine ozs.	433,120	775,936 fine ozs.	553,910	120,790+
Tungsten ore.....	254,118 units	5,910,745	203,965 units	4,835,810	1,074,935—
Zinc.....	5,170,627 lbs.	558,427	16,456,103 lbs.	1,875,996	1,317,569+
Unapportioned.....	a	679,961	b	471,127	208,834—
Total values.....		\$27,703,118		\$24,040,256	
Net decrease.....					\$3,662,862

a Includes molybdenum ore, platinum group metals, and titanium ore.
b Includes antimony, cadmium, molybdenum ore, tin ore, and titanium ore.

ALUMINUM

Bibliography: Report XVIII, p. 198, XXXVII. Bulletins 38, 67. U. S. Geol. Surv., Min. Res. of U. S.

To date there has been no commercial production of aluminum ore in California. Only a single authenticated occurrence of bauxite has thus far been noted in this State, being in Riverside County southeast of Corona, but as yet undeveloped.

Aluminum metal has been reduced in the State in two plants, one at Torrance in Los Angeles County which started production in 1942, and the other at Riverbank, Stanislaus County which went in to operation in May 1943. Both plants were closed down in August of 1944. These plants were constructed by the Defense Plant Corporation and operated by Aluminum Company of America. The ore from which the metal was made was South American bauxite, which was refined to alumina (aluminum oxide) in Mobile, Alabama, before being shipped to these plants.

Minerals containing aluminum are abundant, the most widely distributed being the clays. There are only two, however, thus far of consequence commercially, in the production of the metal; bauxite (to which may be added the related hydrated oxides, hydrargillite and diaspore) and cryolite. Cryolite is found in commercial quantities only in south Greenland, and was formerly the only ore of aluminum used, being still employed as a flux in the extraction of the metal. Bauxite has been for some years the most important source of aluminum and its salts. Its color varies from gray to red, according to the amount of iron present, the composition ranging usually between the following limits: Al_2O_3 , 30%–60%; Fe_2O_3 , 3%–25%; SiO_2 , 0.5%–20%; TiO_2 , 0.0–10%. Besides its reduction to the metal bauxite is also utilized in the manufacture of aluminum salts, refractories, alundum (fused alumina) for use as an abrasive, and in the refining of oil.

ANTIMONY

Bibliography: State Mineralogist Reports VIII, X, XII–XV (inc.), XVII, XXII, XXIII, XXV–XXVII (inc.), XXXI, XXXIV, XXXVI. Bulletins 38, 91.

During 1944 in California there were two small shipments of antimony ore from a single property each in Inyo and Kern counties. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of either operator. During 1943 there was no ore reported shipped.

Pure antimony metal and manufactured antimony compounds are of considerable importance as pigments in the ceramic industry. The most important use of the metal, commercially, is in various alloys, particularly type-metal (with tin and lead), babbitt (with tin and copper), and britannia metal (with tin and copper). An alloy of 6% antimony and 94% lead is being extensively used in making battery plates for storage batteries for automobiles, airplanes and radio apparatus.

Present New York quotations (Sept. 13, 1945) are around 16.5¢ per pound for Chinese (duty paid) and 15.839¢ for domestic antimony.

Antimony Production in California, by Years

The production of antimony ore in California by years since 1887 has been as follows:

Year	Tons	Value	Year	Tons	Value
1887.....	75	\$15,500	1918.....		
1888.....	100	20,000	1925 ^b	*26	\$770
1889.....			1926 ^b		
1893.....	50	2,250	1927.....	20	590
1894.....	150	6,000	1928.....	20	761
1895.....	33	1,485	1929.....		
1896.....	17	2,320	1939.....	150	4,552
1897.....	20	3,500	1940.....	*28	7,958

* Annual details concealed under 'Unapportioned.'

^a Beginning 1940, amount of recoverable metal; before, tons of antimony ore shipped.

ARSENIC

Bibliography: Reports XVIII, XXIII, XXV, XXX, XXXIII, XXXV. Bulletin 67. U. S. G. S., Min. Res. of U. S.

Arsenic is found in a number of localities in California in the mineral arsenopyrite (FeAsS), which is frequently gold bearing; and in scorodite ($\text{FeAsO}_4 + 2\text{H}_2\text{O}$), an oxidation product of arsenopyrite. The occurrence of realgar (AsS) has also been noted.

Except for a small output in 1924, there has been no commercial recovery of arsenic from California ores. There having been only a single operator, the figures are concealed under the 'Unapportioned' item.

BERYLLIUM

Bibliography: State Mineralogist Report XXVII, XXXV, XXXVI, Eng. & Min. Jour.-Press, Vol. 118, No. 8, p. 285, Aug. 23, 1924. U. S. Bureau of Mines Information Circular 6190.

Beryllium is a metal resembling aluminum closely in its chemical character. It has a specific gravity of 1.85, is almost as hard as quartz (will scratch glass) and will take a high polish. The use of beryllium as a metal is still more or less in the experimental stage because the cost of extracting the metal from its ores almost makes it prohibitive and the present sources of supply of the ore are limited. Not until such a time when deposits can be found that will assure a definite supply and metallurgical costs are such as to justify its use, will the metal be found in common use.

There are a number of beryllium minerals, but none have been found in commercial quantities, except beryl, which is beryllium-aluminum silicate. The chief use at present for ground beryl is as an addition to porcelain products, where it reduces the coefficient of expansion. Beryllium metal is difficult to separate from aluminum.

Present (Sept. 13, 1945) quotations for beryllium ore are per ton in carload lots, 8 to 12 percent BeO \$9 to \$10 per unit, f.o.b. mine.

Beryl occurs in California in the pegmatite dikes of the tourmaline gem district in northern San Diego and northwestern Riverside counties; and an occurrence has recently been noted in western Inyo County, but the quantity is as yet unproved. Thus far there have been no commercial shipments of beryl from California except for gem purposes (the pink and aquamarine varieties).

BISMUTH

Bibliography: State Mineralogist Report XXXV. Bulletins 38, 67, 91. Am. Jour. Sci., 1903, Vol. 16.

During 1942, several hundred pounds of bismuth concentrates were made at a tungsten mine in Fresno County, but no shipments were made during the year.

Several bismuth minerals have been found in California, notably native bismuth and bismite (the ochre) in the tourmaline gem district in San Diego and Riverside counties near Pala. Other occurrences of bismuth minerals, including the sulphide, bismuthinite, have been noted in Inyo, Fresno, Nevada, Tuolumne, San Bernardino, and Mono counties,

but only in small quantities. The only commercial production recorded was 20 tons valued at \$2,400 in 1904, and credited to Riverside County.

The uses of bismuth are somewhat restricted, being employed principally in the preparation of medicinal salts, and in low melting-point or cliché alloys. These alloys are utilized in automatic fire sprinkler systems, in electric fuses, and in solders.

The present quotation (Sept. 13, 1945) for bismuth is \$1.25 per pound, in ton lots for the refined metal.

CADMIUM

Bibliography: U. S. Geol. Surv., Min. Res. of U. S., 1908, 1918.

During 1944 cadmium metal was recovered from zinc ore shipped from the Big Bend Mine in Butte County, to the Sullivan Mining Company at Silver King, Idaho for reduction. In 1917 and 1918, cadmium was recovered by the electrolytic zinc plant of the Mammoth Copper Company in Shasta County. It was shipped in the form of 'sticks' and amounted to a total of several thousand pounds for the two years, the exact figures being concealed under 'Unapportioned.' That was the first commercial production of cadmium recorded from California ore. Cadmium occurs there associated with zinc sulphide, sphalerite. Cadmium also occurs in the Cerro Gordo Mines, Inyo County, associated with smithsonite (zinc carbonate).

Cadmium is produced in the United States in two forms—metallic cadmium and the pigment, cadmium sulphide. The principal use of the metal is in low-melting point, or cliché alloys, and its salts are utilized in the arts, medicine, and in electroplating. The sulphide is employed as a paint pigment, being a strong yellow, which is unaffected by hydrogen sulphide gas from coal smoke. It is also employed in coloring glass and porcelain. Cadmium cliché metal is stated to be superior to the corresponding bismuth alloy, for making stereotype plates. Cadmium is also used in bronze telegraph and telephone wires, and gives some promise of being utilized in electroplating.

The present quotation (Sept. 13, 1945) for cadmium is 90¢ per pound for the metal.

CHROMITE

Bibliography: State Mineralogist Reports IV, XII, XIII, XIV, XV, XVII, XVIII, XXI-XXIX (inc.), XXXI, XXXIV-XXXIX (inc.). Bulletins 38, 76, 91. Preliminary Report 3. U. S. G. S., Bull. 430. Min. & Sci. Press, Vol. 114, p. 552.

During 1944 there was shipped from the California mines, a total of 28,811 long tons of chromite averaging 43.58 percent Cr_2O_3 , which recalculated to a basis of 45 percent Cr_2O_3 equals 27,900 long tons, and which was worth \$1,190,513 f.o.b. mine and came from 103 properties in 22 counties; compared with 57,741 long tons of ore shipped in 1943 averaging 43.8 percent Cr_2O_3 , which recalculated to a basis of 45 percent Cr_2O_3 equals 56,201 long tons, valued at \$2,334,838 f.o.b. mine and came from 151 properties in 21 counties; 47,521 long tons of ore shipped, 42.85 percent Cr_2O_3 , which recalculated to a basis of 45 percent Cr_2O_3 equals 45,253 long tons, valued at \$1,741,080 f.o.b. mine and came from

95 properties in 17 counties in 1942. Distributed by counties the 1942, 1943, and 1944 chromite output was as follows:

County	1942		1943		1944

^a Includes Calaveras, El Dorado, Fresno, Glenn, Humboldt, Mendocino, Plumas, San Luis Obispo, Sierra, Tehama, and Tuolumne counties.

^b Includes Calaveras, El Dorado, Fresno, Glenn, Lake, Mendocino, Nevada, San Benito, San Luis Obispo, Sierra, Sonoma, Tehama, and Tuolumne counties.

^c Includes Butte, Calaveras, Colusa, El Dorado, Fresno, Glenn, Lake, Napa, Nevada, San Luis Obispo, San Benito, Sierra, Sonoma, and Tuolumne counties.

The 1942 and 1943 statistics on chromite were not previously released owing to restrictions by the Office of War Information. The 1943 output was the largest in amount and value of chromite mined in California with the exception of that of 1918 when 66,031 long tons of ore were shipped, valued at \$3,694,497.

The chromite shipped in 1944 varied in grade from a shipment running as high as 55.18 per cent Cr_2O_3 in San Benito County, down to one from Humboldt County running 32.18 per cent Cr_2O_3 , and a large shipper's ore that averaged 52.97 per cent Cr_2O_3 for the year; as compared with 1943 when ore shipped varied from 54 per cent Cr_2O_3 coming from Placer County to a shipment of 32 per cent Cr_2O_3 from El Dorado County, and a large shipper in Del Norte County whose ore averaged for the year 51.9 per cent Cr_2O_3 ; and with 1942 when a shipment of ore as high as 58.2 per cent Cr_2O_3 was made from Siskiyou County and as low as 32 per cent Cr_2O_3 from El Dorado County, and with a large shipper in Del Norte County averaging for the year at 51 per cent Cr_2O_3 .

California miners received an average of \$41.32 a long ton for chromite shipped during 1944, compared with \$40.44 a long ton for ore shipped in 1943 and \$36.64 a long ton for ore shipped in 1942.

Occurrence

Chromite is widely distributed in California, the principal production, thus far, having come from El Dorado, San Luis Obispo, Del Norte, Shasta, Siskiyou, Placer, Fresno, and Tuolumne counties. In 1918 a total of 29 counties contributed to the State's output. There are two main belts in California yielding this mineral, one along the Coast Ranges from San Luis Obispo County to the Oregon line, including the Klamath Mountains at the north end, and the other in the Sierra Nevada from Tulare County to Plumas County. Chromite occurs as lenses in basic igneous rocks such as periodite and pyroxenite, and in serpentines which have been derived by alteration of such basic rocks.

Uses

The major consumption of chromite ore is for use as a refractory lining in smelting furnaces for steel and copper. A smaller portion is used in the preparation of ferrochrome for chrome-steel alloys, and of chromium chemicals, the latest development of which is chrome plating as used in the automobile industry, on ships, and in oil refineries to protect metal surfaces from wear and erosion.

Total Chromite Production of California

Production of chromite in California began, apparently in the period 1869-1873 in Del Norte County, followed by San Luis Obispo in 1874. There was considerable activity in San Luis Obispo from 1880 to 1883, inclusive, and a total of 23,238 long tons (or 26,028 short tons) valued at \$329,924 was shipped from that county up to the beginning of 1887. There are records of shipments from Sonoma County (before 1883), Placer County (1883 and 1884), and Calaveras County. Apparently the state's total in the period 1869-1883 was some 45,000 tons.¹ The tabulation herewith shows the output of chromite in California annually, including the earliest figures so far as they are available. The figures from 1887 to date are from the records of the State Mining Bureau:

Year	Tons	Value	Year	Tons	Value
1869-1883			1913	1,180	\$12,700
Del Norte County	19,000	\$239,400	1914	1,517	9,434
Sonoma County			1915	3,725	38,044
Placer County			1916	48,943	717,244
Calaveras County			1917	52,379	1,130,298
1874-1887 (San Luis Obispo County)	26,028	329,924	1918	73,955	3,649,497
1887	3,000	40,000	1919	*4,314	97,164

¹ Day, D. T., Mineral Res. of the U. S. 1882-1884, U. S. G. S., pp. 569, 570, 1885.

COBALT

Bibliography: Report XIV, XXXIII, XXXIV, XXXVII. Bulletins 67, 91. U. S. G. S., Min. Res. of U. S., 1912, 1918. U. S. B. M., I.C. 6331.

Occurrences of some of the cobalt minerals have been noted in several localities in California, but to date no commercial production has resulted. Some of the copper ores of the foothill copper belt in Mariposa and Madera counties have been found to contain cobalt up to 3%.

The nominal quotation for cobalt (August 10, 1944) is around 97 to 99% at \$2.11 per pound for the refined metal in small lots.

The most important use of cobalt is in the manufacture of the alloy, stellite, in which it is combined with chromium, for making high-speed lathe tools, and non-tarnishing cutlery and surgeons' appliances. The metal is also used in electroplating, similarly to nickel; and the oxide, carbonate, chloride, sulphate and other salts are used in ceramics for coloring. Some of the organic salts of cobalt (acetate, resinate, oleate) are employed as 'driers' in paint and varnish.

COPPER

Bibliography: State Mineralogist Reports VIII-XXXIX (inc.). Bulletins 23, 50, 91.

The total output of copper in California during 1944 amounted to 25,584,856 pounds recoverable metal valued at \$3,453,957, and came from properties in 16 counties. This was an increase in both amount and value as compared with the 1943 figures which were 17,172,440 pounds worth \$2,232,417. The average price by miners including bonus for copper during 1944 was 13.5¢ per pound compared with 13.0¢ in 1943; 12.1¢ in 1942; 11.8¢ per pound in 1941; 11.3¢ per pound in 1940; 10.4¢ per pound in 1939; 9.8¢ in 1938; 12.1¢ in 1937; 9.2¢ in 1936; 8.3¢ in 1935; and 8.0¢ in 1934.

Distribution of the 1944 output of copper in California by counties was as follows:

County	Pounds	Value
Amador.....	440,962	\$59,530
Butte.....	464,858	62,756
Calaveras.....	4,952,034	668,524
El Dorado.....	52,658	7,109
Inyo.....	557,286	75,234

Mariposa.....	182,799	24,678
San Bernardino.....	390,634	52,736
Shasta.....	2,585,656	349,063
Siskiyou.....	15,856,568	2,140,637
Tuolumne.....	13,993	1,889
Alameda, Alpine, Kern, Nevada, Orange*	15,196	2,051
Totals.....	25,584,865	\$3,453,957

* Combined to conceal output of producers in each.

According to the U. S. Bureau of Mines¹ the smelter production of primary copper from domestic sources during 1944 totaled 1,003,379 short tons compared with 1,092,939 short tons for 1943, or a decrease of approximately 8 percent. The average price of copper during the year as reported to the U. S. Bureau of Mines by selling agents was 11.8¢ per pound f.o.b. refinery but not including bonus payments of the Metal Reserve Company.

¹ U. S. Bureau of Mines Mineral Market Report MMS 1314, July 4, 1945.

Copper Production of California, by Years

Although some mining of copper ores in a small way had been done earlier, shipments in appreciable quantities began in 1861 and continued of importance up to the end of 1867, when a total of 68,631 tons (of 2376 pounds) of high-grade ores, and 847 tons of matte or ‘regulus’² had been shipped to smelters at New York, Boston, and Swansea, Wales. The most important district at that time was Copperopolis and vicinity in Calaveras County, with some shipments also made from Mariposa, El Dorado, Fresno and San Luis Obispo counties. From 1868 to 1882, the output was insignificant. There are wide discrepancies in the figures recorded for copper production previous to 1882, in which year the data of the U. S. Geological Survey began. The detailed statistics of the California State Mining Bureau began in the year 1894.

Amount and value of copper production in California annually since 1882 is given in the following tabulation:

Copper Production of California, by Years

Year	Pounds	Value	Year	Pounds	Value
1882	826,695	\$144,672	1914	30,491,535	\$4,055,375
1883	1,600,862	265,743	1915	40,968,966	7,169,567
1884	876,166	120,911	1916	55,809,019	13,729,017

GOLD

Bibliography: State Mineralogist Reports I to XXXIX (inc.), (except III and VIII). Bulletins 36, 45, 57, 91, 92, 95, 108. U. S. Geol. Surv., Prof. Paper 73. U. S. Bur. of Mines, Econ. Paper 3 (1929).

Gold was first, and, for many years, the most important single mineral product of California. Although now surpassed for a number of years in annual value by petroleum, and by natural gas from 1923

² Browne, J. Ross, Mineral Resources West of the Rocky Mountains, p. 168, 1867.

to 1932, and 1943; and headed the metal list till 1943 when it was passed in value by both quicksilver and tungsten ore; and tungsten ore only in 1944. Prior to 1943 California outranked all other gold producing states in the United States for many years.

There was a steady increase in the output of both lode and placer mines in California from 1928 to 1942, but in 1941 the value of placer production continued to increase, although that of lode dropped off 8 per cent and in 1942 a sharp decline in the yield of both lode and placer mines, first by the increased difficulty of obtaining supplies and labor and on October 8, 1942, the War Production Board's Order L-208, closing down most of the gold and silver mines in the State. During 1944 there were 109 operating lode properties and 66 placer properties, compared with 139 lode properties and 82 placer properties in 1943, but these did not include snipers, prospectors and various individuals selling gold in small lots to bullion dealers.

The production of gold in California during 1944 totaled 117,373 fine ounces valued at \$4,108,055, being a decrease of 30,955 fine ounces from the 1943 yield, which was 148,328 fine ounces worth \$5,191,480. In 1944 deep or lode mines accounted for 42,324 fine ounces worth

\$1,481,340, and placers (mainly bucket-line, drag-line, and power shovel dredges) produced 75,049 fine ounces worth \$2,626,715.

The 1940 output was the largest in value since 1856 and in amount since 1862. The 1939 lode output of gold was undoubtedly the largest in the history of the State, while the yield of 1944 was the smallest in both amount and value since 1848, the year that gold was discovered in California.

As the Division of Mines has never independently gathered the statistics of gold and silver production, these figures, as in former years, are published by cooperation with and through the courtesy of Charles White Merrill of the Division of Mineral Statistics, U. S. Bureau of Mines.

The leading four counties were Yuba, Sacramento, Nevada, and Butte, none of which reached the million dollar output. In 1943 for the first year since 1880, the year that a segregation of gold by counties was first made, that the value of this metal from Nevada or Amador was less than a million dollars; and that of Sacramento County since 1908. In 1941 there were 15 counties with a gold output worth more than a million dollars and in 1942 eight counties.

The gold from Nevada, Kern, Amador, Mariposa, Sierra, and Tuolumne counties is mainly from the lode or deep mines; while that from Butte, Sacramento, San Joaquin, and Yuba counties is almost entirely from dredges.

Distribution for the 1944 gold output by counties was as follows:

Counties	Mines producing ¹		Totals	
	Lode	Placer	Fine ounces	Value
Alpine.....	1		15	\$525
Amador.....	5	(2)	734	25,690

¹ Excludes itinerant prospectors, snipers, high-graders, and others who gave no evidence of legal right to property.

² Output from property not classed as a "mine."

³ Combined to conceal output of individual.

The following is quoted from the advance statement of gold in 1944 by courtesy of the U. S. Bureau of Mines,* Department of the Interior:

"Gold†—An uninterrupted rise beginning in 1929 culminated in the production of \$50,948,485 in gold in 1940, the largest value since 1856. In 1941, however, a reaction set in that gained headway in 1942. By January 1943 monthly production had sunk to 16,425 fine ounces, and since that time it has fluctuated between that figure and a low of 8,547 ounces established in February 1943. The monthly fluctuations were narrower during 1944; the monthly average for the year was 9,781 ounces compared with a monthly average of 12,361 ounces for 1943. Compared with 1942, the decrease of 699,669 ounces (\$24,488,415) recorded in 1943 was greater in both quantity and value than that between any other two years in the State's history, not excluding 1852-53, 1854-55, and 1856-57, when flush placer output was failing; 1883-84, when the Sawyer Decision drastically reduced hydraulicking; and 1917-18, when World War I caused many operations to suspend or curtail output. The decrease of 30,955 ounces valued at \$1,083,425 in 1944 from 1943 seems small when the decrease of the two preceding years is considered.

"A study of the monthly production figures since January 1937 brings out some points that are obscure in the annual figures. The uninterrupted upward trend shown in the annual figures beginning in 1929 and culminating in 1940 is paralleled in the available monthly data. It will be noted, however, that a serious recession was experienced in July 1940 from which industry did not fully recover until November. This was caused by a labor strike at the Selby smelter and refinery of the American Smelting & Refining Co., which resulted in the postponement of many shipments of ore, concentrates, and bullion; the strike was called July 1, and work was resumed November 9. The peak reached in December 1940 may be attributed, at least in part, to the move-

Twenty-five leading gold-producing mines in California in 1944, in order of output

ment of material accumulated during the strike. Beginning with January 1941, however, the trend is unmistakably downward, and the rate of decline accelerates as the months pass. The downward plunge is arrested in October 1942 probably because many operations, closed by War Production Board Order L-208, made final clean-ups, which were shipped before the end of the month. At any rate, the decline in November and December 1942 put the curve back on the precipitous trend line shown during the few months preceding October. By January production had reached a level that permitted little further recession, and this low level has ruled throughout 1943 and 1944 with only a slight additional decline.

"The 25 leading gold-producing mines in California in 1944, listed in the foregoing table, yielded 90 percent of the total gold output of the State; the leading five mines produced 62 percent and the leading 10 mines 79 percent. Many changes have taken place in the list since 1943; and only eight of the mines listed in 1942 are on the 1944 list."

Total Gold Production of California

The presence of gold in stream gravels near Los Angeles was known and worked in a small way by the Indians, at least as early as 1841,¹ and possibly 1820.² On March 2, 1844, Don Manuel Castanares, deputy for California to the Congress of Mexico, reported³ to his government that placers near Los Angeles had produced up to December, 1843, a total of 2000 ounces of gold dust, most of which had been sent to the United States Mint at Philadelphia.

As the padres and the rancheros discouraged the quest of gold, this early, small production caused no particular excitement. It was not until James W. Marshall's finding of gold nuggets in the tail-race of Sutter's saw mill on the American River, January 24, 1848, was heralded abroad that the great rush began, and California became a commonwealth of first rank almost over night. There are, however, no authentic data on gold production prior to 1848, other than occasional, scattered references such as above quoted.

The following table was originally compiled by Chas. G. Yale, of the Division of Mineral Resources, U. S. Geological Survey, but for a number of years statistician of the California State Mining Bureau and the U. S. Mint at San Francisco. The authorities chosen for certain periods were: J. D. Whitney, State Geologist of California; John Arthur Phillips, author of "Mining and Metallurgy of Gold and Silver" (1867); U. S. Mining Commissioner R. W. Raymond; U. S. Mining Commissioner J. Ross Browne; Wm. P. Blake, Commissioner from California to the Paris Exposition, where he made a report on "Precious Metals" (1867); John J. Valentine, author for many years of the annual report on precious metals published by Wells, Fargo & Company's Express; and Louis A. Garnett, in the early days manager of the San Francisco refinery, where records of gold receipts and shipments were kept. Mr. Yale obtained other data from the reports of the director of the U. S. Mint and the director of the U. S. Geological Survey. The authorities referred to who were alive at the time of the original compilation of this table in 1894 were all consulted in person or by letter by Mr. Yale with reference to

¹ Hittell, T. H., History of California, Vol. II, p. 12, 1885.

² Bancroft, H. H., History of California, Vol. II, p. 417, 1886.

³ Mercantile Trust Review of the Pacific, Vol. XIV, No. 2, p. 43, Feb. 15, 1925.

the correctness of their published data, and the final table quoted was then made up.

There was no premium paid on gold during 1932, the price being \$20.67 a fine ounce. On August 29, 1933, there was an executive order lifting the embargo on gold ores, concentrates, precipitates, and unretorted amalgam, followed on October 25, 1933, by another order instructing the Reconstruction Finance Corporation to buy newly-mined gold at a price fixed by the U. S. Treasurer which corresponded to the world price, all of which had an effect on the 1933 gold yield. On January 30, 1934, the Gold Reserve Act of 1934 was passed, followed by the President's proclamation of January 31, 1934, which fixed the weight of the gold dollar at 15 5/21 grains, nine-tenths fine. The value of gold thereby became \$35 a fine ounce. The average weighted value of gold per fine ounce in 1934 was \$34.95.

The figures for 1903-1923 (inclusive) are those prepared by the U. S. Geological Survey; and since by the U. S. Bureau of Mines:

Total Gold Production of California, 1848 to 1944

Year	Fine ounces	Value	Year	Fine ounces	Value
1848	11,866	\$245,301	1897	767,779	\$15,871,401

			Totals	101,381,369	\$2,250,395,616

^a Value calculated at an average weighted price of \$25.56 per fine ounce; previously \$20.6718.

^b Value calculated at an average weighted price of \$34.95 per fine ounce.

^c Value \$35 per fine ounce, beginning 1935.

IRIDIUM (see under Platinum)

IRON ORE

Bibliography: State Mineralogist Reports II, IV, V, X, XII-XV (inc.), XVII, XVIII, XXI-XXVII (inc.), XXX, XXXI, XXXIII-XXXVI (inc.), XXXIX. Bulletins 38, 67, 91. Am. Inst. Min. Eng., Trans. LIII. Min. & Sci. Press, Vol. 115, pp. 112, 117-122; Vol. 123, pp. 94-96, 113-114.

The iron ore shipped in California during 1944 totaled 905,981 net tons, valued at \$2,360,694 f.o.b. mine, and came from one property each in San Bernardino, Santa Cruz, and Shasta counties. The above figures showed a slight decrease in amount with an increase in value as compared with the 1943 output of 907,458 net tons, worth \$2,341,827.

The ore mined during the year was hematite from San Bernardino County which went to the new steel plant at Fontana and was also used in the manufacture of high-iron cement; magnetite from Shasta County and magnetite sands from Santa Cruz County, both used as an aggregate in heavy concrete for ballast.

There are considerable deposits of iron ore known in California, notably in Shasta, Madera, Placer, Plumas, Riverside, San Bernardino, and Los Angeles counties, but production has so far been limited for lack of an economic supply of coking coal. Some pig iron was made in the earlier years, utilizing charcoal for fuel, both in blast furnaces and by electrical reduction; also, ferrochrome, ferromanganese, and ferrosilicon have been made in California.

Iron Ore Production in California, by Years

Total iron ore production of California, with annual amounts and values, is as follows:

Year	Tons	Value	Year	Tons	Value
1881*-----	9,273	\$79,452	1921-----	1,970	\$12,030
1882-----	2,073	17,766	1922-----	3,588	18,868
1883-----	11,191	106,540	1923-----	3,102	18,665
1884-----	4,352	40,983	1924-----		
1885-----			1925/a-----	785	4,710
1886-----	3,676	19,250	1926-----		
1887-----			1927/a-----	5,272	26,000
1893-----	250	2,000	1928-----		
1894-----	200	1,500	1930-----		
1895-----			1931/a-----	100	700
1907-----	400	400	1932-----		
1908-----			1934-----		
1909-----	108	174	1935/a-----	38,339	163,714
1910-----	579	900	1936-----	31,084	155,434
1911-----	558	558	1937-----	5,490	29,340
1912-----	2,508	2,508	1938-----	27,878	141,406
1913-----	2,343	4,485	1939-----	16,990	77,788
1914-----	1,436	5,128	1940-----		
1915-----	724	2,584	1941/a-----	54,707	194,362
1916-----	3,000	6,000	1942-----	99,092	371,562
1917-----	2,874	11,496	1943-----	907,458	2,341,827
1918-----	3,108	15,947	1944-----	905,981	2,360,694
1919-----	2,300	13,796			
1920-----	5,975	40,889	Totals-----	2,158,824	\$6,389,156

* Productions for the years 1881-1886 (inc.) were reported as "tons of pig iron" (U.S.G.S., Min. Res. 1885), and for the table herewith are calculated to "tons of ore" on the basis of 47.6% Fe as shown by an average of analyses of the ores (State Mineralogist Report IV, p. 242). This early production of pig iron was from the blast furnaces then in operation at Hotelling in Placer County. Charcoal was used in lieu of coke. Though producing a superior grade of metal, they were obliged finally to close down, as they could not compete with the cheaper English and eastern United States iron brought in by sea to San Francisco.

LEAD

Bibliography: State Mineralogist Reports IV, VIII-XV (inc.), XVII-XXVIII (inc.), XXX, XXXI, XXXIII-XXXVI (inc.), XXXIX.

The output of lead in California during 1944 came from eleven counties and amounted to a total of 11,408,381 pounds of recoverable metal valued at \$912,670, as compared with 11,811,034 pounds worth \$885,827 in 1943. The average price received for lead, including bonas, in 1944 was 8¢ per pound, compared with 7.5¢ in 1943; 5.7¢ per pound in 1941; 5.0¢ per pound in 1940; 4.7¢ per pound in 1939; 4.6¢ per pound in 1938; 5.9¢ per pound in 1937; and 4.6¢ per pound in 1936.

Distribution of the 1944 output of lead by counties was as follows:

County	Pounds	Value
Butte.....	56,209	\$4,497
Calaveras.....	191,233	15,298
Inyo.....	10,060,151	804,812
Kern.....	7,142	571
Mariposa.....	255,657	20,453
Orange.....	36,464	2,917
San Bernardino.....	299,278	23,942
Shasta.....	500,509	40,041
Amador, El Dorado, Nevada*.....	1,738	139
• Totals.....	11,408,381	\$912,670

* Combined to conceal the output of individual operators in each.

Lead Production of the United States

According to data issued by the U. S. Bureau of Mines ¹ during 1944, the production of primary lead from domestic ores in the United States was 494,443 net tons valued at \$50,489,000, being a decrease in amount and value from 1943 when 406,544 net tons of lead from domestic ores worth \$52,038,000 was produced. During 1944 there were 722,820 short tons of refined lead consumed in the United States, compared with 675,465 short tons in 1943.

Lead Production of California, by Years

Statistics on lead production in California were first compiled by this Bureau in 1887. Amount and value of the output, annually, with total figures, to date, are given in the following table:

¹ U. S. Bureau of Mines, Mineral Market Notes 1317, July 6, 1945.

Lead Production of California, by Years

Year	Pounds	Value	Year	Pounds	Value

MANGANESE

Bibliography: State Mineralogist Reports XII-XV (inc), XVIII, XXII-XXVII (inc.), XXIX-XXXI, XXXIII-XXXIX (inc.). Bulletins 38, 67, 76, 91. U. S. G. S. Bull. 427. Eng. & Min. Jour.-Press, Vol. 117, p. 545.

Shipments of manganese ore during 1944 from 67 properties in 20 counties amounted to 34,282 long tons of an average grade of 39.72 percent Mn, which recalculated to a basis of 45 percent Mn, would equal 30,263 long tons, and was valued at \$1,098,555; compared with shipments from 58 properties in 24 counties in 1943, totaling 31,432 long tons of an average grade of 36.84 percent Mn, which recalculated to a basis of 45 percent Mn, would equal 25,729 long tons, and worth \$957,317; and with 1942 when 21,069 long tons of an average grade of 37.08 percent Mn were shipped from 53 properties in 20 counties, which recalculated to a basis of 45 percent Mn would equal 17,362 long tons, and was worth \$505,190.

The 1942 and 1943 manganese data were not previously released owing to restrictions by the Office of War Information.

The 1942, 1943, and 1944 shipments by counties were as follows :

County	1942		1943		1944	
	Long tons ^d	Value	Long tons ^d	Value	Long tons ^d	Value
Alameda.....	*	*	76	\$3,062	*	*

* Combined to conceal the output of individuals in each.

^a Includes properties in Alameda, Amador, Imperial, Humboldt, Lake, Marin, Mariposa, Mendocino, Nevada, Mono, Plumas, Riverside, San Bernardino, San Joaquin, San Luis Obispo, Santa Clara, Sonoma, and Tulare counties.

^b Includes properties in Calaveras, Humboldt, Imperial, Inyo, Lake, Marin, Mariposa, Mendocino, Nevada, Placer, Plumas, Riverside, San Benito, Santa Clara, Shasta, Siskiyou, and Tulare counties.

^c Includes properties in Alameda, Amador, Colusa, Glenn, Humboldt, Imperial, Marin, Mendocino, Nevada, Plumas, Riverside, San Joaquin, Santa Clara, Shasta, Siskiyou, and Sonoma counties.

^d Long tons recalculated to 45% Mn.

The manganese ores shipped in 1944 varied in grade from one of 55.71 percent Mn for Plumas County and one of 55.31 percent Mn from Amador County to 17 percent Mn from San Bernardino County, and two large producers in Trinity County whose ores shipped during the year both averaged over 52 percent Mn. In 1943 ore shipped varied from shipments from one property that averaged 56.36 percent Mn to one as low as 14.03 percent Mn from Tulare County; and in 1942 the grades of ore shipped varied from a property in Trinity County whose ore averaged 53.26 Mn for the year to one in San Bernardino County with ore shipments running 19 percent Mn.

The average received by California miners for ore shipped in 1944 was \$32.04 a long ton f.o.b. mine, compared with \$30.46 a long ton f.o.b. mine in 1943; and \$23.10 a long ton f.o.b. mine in 1942.

Manganese Ore Production in California, by Years

Production of manganese ore in California began at the Ladd Mine, San Joaquin County, in the Telsa District in 1867. When shipments of this ore to England ceased late in 1874, upwards of 5000 tons had been produced by that property. For some years following that, the output was small. The tabulation herewith shows California's output of manganese ore, annually, since 1887, when the compilation of such figures was begun by the State Mining Bureau :

Manganese Production in California by Years

Year	Tons	Value	Year	Tons	Value
1887	1,000	\$9,000	1915	4,013	\$49,098
1888	1,500	13,500	1916	13,404	274,601

MOLYBDENUM

Bibliography: State Mineralogist Reports XIV, XVII-XXIV (inc.), XXVI-XXVIII (inc.), XXX, XXXIV-XXXVI (inc.). Bulletins 67, 91. U. S. Bur. of Min., Bulletin 111. Proc. Colo. Sci. Soc., Vol. XI.

Molybdenum is used as an alloy constituent in the steel industry, and in certain forms of electrical apparatus. Included in the latter is its successful substitution for platinum and platinum-iridium in electric contact-making and -breaking devices. In alloys it is used similarly to and in conjunction with chromium, cobalt, iron, manganese, nickel, tungsten and vanadium. The oxides and the ammonium salt have important chemical uses.

The two principal molybdenum minerals are: the sulphide, molybdenite, and wulfenite, lead molybdate; the former furnishing practically the entire commercial output. Molybdenite is found in or associated with acidic igneous rocks, such as granite and pegmatite.

Deposits of disseminated molybdenite are known in several localities in California, and in at least two places it occurs in small masses associated with copper sulphides. The first recorded commercial shipments of molybdenum ore in California were during the war, 1916-1918. Some development work has been done on a high-grade deposit at the head of the Kaweah River, Tulare County.

During 1944 there were shipments of molybdenum concentrates in California coming from a tungsten mine in Inyo County. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of an individual producer. The 1943 output was the largest annual yield.

The growing consumption of molybdenum by alloy-steel makers in the United States has been stimulated by the fact that molybdenum alone of the steel-alloying metals can be produced commercially in the United States to an extent which avoids all necessity for importation. Another fact has been the marked adaptability of molybdenum steels to large-scale production of automobile and other parts.

The present (Sept. 13, 1945) quotations on molybdenum ores are 45¢ per pound of MoS_2 contained, f.o.b. mine, and on ferromolybdenum are 95¢ per pound Mo, 55%-65% Mo f.o.b. shipping point.

Molybdenum Production of California, by Years

California's production of molybdenum ore by years is summarized in the following tabulation :

Year	Pounds of MoS_2	Value
1916	9,280	\$9,945
1917	7,290	9,014
1918

NICKEL

Bibliography: State Mineralogist Reports XIV, XVII, XXIV, XXV, XXVIII, XXX, XXXIV-XXXVI (inc.) XXXIX. U. S. G. S., Bulletin 640-D. U. S. Bureau of Standards, Circular 100.

Nickel occurs in the Friday Copper Mine in the Julian District, San Diego County. The ore is a nickel-bearing pyrrhotite, with some associated chalcopyrite. Some ore has been mined in the course of development work but not treated nor disposed of, as they were unable to get any smelter to handle it for them. Nickel ore has also been reported from other localities in California, but not yet confirmed.

Present (June 11, 1942) quotations for nickel are around 35¢ per pound for the refined metal.

OSMIUM (see under Platinum)

PALLADIUM (see under Platinum)

PLATINUM GROUP METALS

Bibliography: State Mineralogist Reports IV, VIII, IX, XII-XXVI (inc.), XXVIII, XXX, XXXI, XXXIV-XXXVII (inc.). Bulletins 38, 45, 67, 85, 91, 92. U. S. Geol. Surv., Bulletins 193, 285. Trans. Am. Inst. Min. Eng., Vol. 47, pp. 217-218.

In California the platinum-group metals are obtained as a by-product from placer operations for gold. The major portion of it comes

from the dredges working in Amador, Butte, Merced, Sacramento, Stanislaus, Shasta, Trinity and Yuba counties, with a small amount coming from the hydraulic and surface sluicing mines of Del Norte, Humboldt, Siskiyou and Trinity counties.

During 1944 there were no platinum metals reported shipped from California mines, and for the first time since 1887, the year that production data began in this State. This was due to the shut-down of the gold mines.

Present quotations ¹ (Sept. 13, 1945) are, platinum \$35 a fine ounce; iridium \$90 to \$100 per fine ounce; osmium per fine ounce, \$50; palladium per fine ounce, \$24; ruthenium per fine ounce \$35; rhodium per fine ounce, \$125.

Platinum Production of California, by Years

The annual production and values since 1887 have been as follows:

Year	Ounces	Value	Year	Ounces	Value

QUICKSILVER

Bibliography: State Mineralogist Reports IV, V, XII-XV, XVII-XXIX (inc.), XXXI, XXXIII-XXXVII (inc.). Bulletins 27, 78, 91. U. S. Geol. Surv., Monograph XIII. U. S. Bur. of Mines, Tech. Papers 96, 227; Bulletin 222, 335.

The production of quicksilver in California during 1944 totaled 28,097 flasks, valued at \$3,178,969 f.o.b. mine, and came from 63 properties in 14 counties; as compared with 33,948 flasks, worth \$6,177,159 in 1943, which came from 86 properties in 17 counties. The 1943 and 1944 outputs, distributed by counties were as follows:

County	1943		1944	
	Flasks 76 lbs.	Value	Flasks 76 lbs.	Value
Fresno.....	32	\$5,930		
Lake.....	4,206	774,813	3,781	\$403,317

Sonoma.....	4,121	761,654	*	*
Colusa, Contra Costa, Del Norte, Inyo, Kings, Monterey, San Benito, Santa Barbara, Siskiyou, Trinity, Yolo*	19,205	3,470,432		
Contra Costa, Del Norte, Inyo, Mono, Monterey, San Benito, Santa Barbara, Santa Clara, Sonoma, Trinity, Yolo*			22,219	2,515,452
Totals.....	33,948	\$6,177,159	28,097	\$3,178,969

* Combined to conceal production of individual operators in each.

The 1943 output of quicksilver had the highest annual value ever recorded in the past 93 years in which a record had been kept of its production in California, and was the largest in amount since 1883. The 1944 California production was the largest of any State in the United States and was approximately 75 per cent of the national yield. During 1944 the average New York quotation on quicksilver was \$118.36 per 76-pound flask, while the average amount received by the California miner was \$113.14 per 76-pound flask; as compared with the 1943 average New York quotation of \$195.21 per 76-pound flask and the average price of \$181.96 paid to the California miner.

Total Quicksilver Production of California

Total amount and value of the quicksilver production of California, as given in available records, are shown in the following tabulation. Though the New Almaden Mine in Santa Clara County was first worked in 1824, and was in practically continuous operation from 1846 to 1921 (the yield being small the first two years), there are no available data on the output earlier than 1850. Previous to June, 1904, a 'flask' of quicksilver contained 76½ pounds; then 75 pounds up to and including 1927; beginning with 1928, 76 pounds. In compiling this table the following sources of information were used: for 1850-1883, table by J. B. Randol, in Report of State Mineralogist IV, p. 336; 1883-1893, U. S. Geological Survey reports; 1894 to date, statistical bulletins of the State Mining Bureau; also State Mining Bureau, Bulletin 27, "Quicksilver Resources of California," 1908, p. 10.

Quicksilver Production of California, by Years

SILVER

Bibliography: State Mineralogist Reports IV, VIII, XII-XXXIX (inc.). Bulletins 67, 91, 108. Min. & Sci. Press, March 1, 1919.

The output of silver during 1944 amounted to a total of 778,936 fine ounces valued at \$553,910, being an increase in both amount and value as compared with the 1943 production, which was 609,075 fine ounces worth \$433,120. Of the 1944 yield 4,531 fine ounces worth \$3,222 came from the placers, the remainder of 774,405 fine ounces worth \$550,668 from lode or deep mines. The average price paid for new mined domestic silver in 1944 was 71.11¢ per fine ounce compared with 71.11¢ in 1943; 71.11¢ in 1942; 71.11¢ in 1941; 71.11¢ in 1940; 67.80¢ in 1939; 64.60¢ in 1938; 77.35¢ in 1937; 77.45¢ in 1936; and 71.875¢ in 1935.

Silver production by counties for 1944 was as follows:

County	Fine ounces	Value
Alpine.....	671	\$477
Amador.....	2,143	1,524
Butte.....	11,835	8,416
Calaveras.....	58,081	41,302

³ Combined to conceal output of an individual.

The following paragraph is quoted from the U. S. Bureau of Mines,^a chapter on Gold and Silver from Mineral Year Book 1944, by courtesy of Charles White Merrill:

"Silver—Most of the silver output in California in 1944 was more localized than that of the gold; the 10 leading silver producing mines listed in the following table yielded 82 percent of the State total recoverable silver in that year, and the 4 leading mines yielded 62 percent. All 10 leading mines derived their silver from argentiferous base-metal ores."

Ten leading silver-producing mines in California, in 1944, in order of output

Rank	Mine	District	County	Rank in 1943	Operator	Source of silver

Silver Production of California, by Years

The amount and value of the silver production of California, and the average price, annually, since 1880 are given in the table following. In the table shown in the statistical bulletins previously to Bulletin 97 (for 1925), the values shown for 1880-1904 (inc.) were taken from the reports of the Director of the Mint, of which the figures for 1880-1896 (inc.) were based on 'coinage value' (\$1.2929 per fine ounce). We have recalculated these to commercial value, using the price table of the U. S. Geological Survey (McCaskey, H. D.), Gold and Silver, 1913: Mineral Resources of the U. S., Part I, p. 847. From 1905 to date, the figures are those of the U. S. Geological Survey and its successor, the U. S. Bureau of Mines. Figures for the years prior to 1880 are not available, as there were no reliable records compiled.

Silver Production of California, by Years, Since 1880

Year	Fine oz.	Value	Average price per oz.	Year	Fine oz.	Value	Average price per oz.

TIN

Bibliography: Reports XV, XVII, XVIII, XXV, XXXI, XXXIV, XXXV-XXXVII. Bulletins 67, 91.

During 1944 there was a small shipment of tin ore reported from Kern County which was shipped to the stock-pile of the Metal Reserve Company. The annual details were concealed under the 'Unapportioned' item so as not to reveal the output of an individual producer.

In 1940 there was some development at the Apex Mine nine miles north of Cima, San Bernardino County, but no shipments reported to date. Here the tin ore occurs in small kidneys along the talcose slip in dolmitic limestone.

In 1928 and 1929 there was a small amount of tin produced from California ore as well as considerable development work which was done at the Temescal mine in Riverside County near Corona. There was an output from the district during 1891-1892 as tabulated below. Small quantities of stream tin have been found in some of the placer workings in northern California, but never in paying amounts.

Two occurrences have also been noted, in northern San Diego County. Crystals of cassiterite were found there, associated with blue tourmaline crystals, amblygonite and beryl. No commercial quantity has been developed, only small pockets having been taken out.

Total Output of Tin in California

Year	Pounds	Value
1891	125,289	\$27,564
1892	126,000	32,400
1928		
1929 ^a	1,200	580
1944	a	a
Totals	252,489	\$60,544

TITANIUM

Bibliography: State Mineralogist's Reports XXIII, XXXIV.

During 1944 there were small shipments of titanium ore (ilmenite) made from material recovered from beach sand at Hermosa Beach, Los Angeles County. The annual details are concealed under the 'Unapportioned' item to conceal the output of an individual producer.

All titanium ore mined in this State came from Los Angeles County and was produced from either the beach black sands which contained approximately 20% titaniferous iron and magnetite, the gangue being silica and several silicates, or from a lode deposit in the San Gabriel Mountains.

The market price of titanium minerals varies as to the titanium oxide it contains. Present (Sept. 13, 1945) quotations are: Rutile 94% TiO at 8¢ to 10¢ a pound, ilmenite 60% TiO at \$28 to \$30 a gross ton, all prices Atlantic seaboard.

The metal is used in several different alloys with iron, copper and aluminum and for green and white paint pigments, the only colors of titanium pigments now in common use. It is also used in dyes, rubber, as a porcelain glaze, in glass, and cement made from high-titanium iron slags. This cement is resistant to the action of acids.

Total Output of Titanium in California by Years

Year	Tons	Value

TUNGSTEN

Bibliography: Reports XV, XVII, XVIII, XXII, XXIV, XXVIII (inc.), XXX, XXXIV-XXXVII (inc.). Bulletins 38, 67, 91, 95, U.S.G.S., Bull. 652. Proc. Colo. Sci. Soc., Vol. XI. South Dakota School of Mines, Bulletin No. 12. Eng. and Min. Jour.-Press, Vol. 113, pp. 666-669, Apr. 22, 1922.

The commercial production of tungsten ores and concentrates in California began in 1905; and has been continuous since, with the exception of 1920-1922, inclusive.

During 1944 shipments were made in California of high-grade tungsten ore and concentrates as reported to the Division of Mines by producers, amounting to a total of 203,965 units of WO₃ or an equivalent of 3,399 net tons of 60 per cent WO₃ concentrates, and valued at \$4,835,810, which came from properties in Fresno, Inyo, Kern, Madera, Mono, Nevada, Riverside, San Bernardino, and Tulare counties. The 1944 output showed a decrease in both amount and value as compared with that of 1943 which totaled 254,118 units of WO₃, or an equivalent of 4,325 tons of 60 per cent WO₃ concentrates and was valued at \$5,910,745, and was the largest annual production reported in this State. The following table gives the 1943 and 1944 tungsten production by counties:

County	1943		1944	
	Units	Value	Units	Value
Fresno-----	2,888	\$79,105	8,280	\$204,624
Inyo-----	213,700	4,841,322	163,099	3,849,015

* Combined to conceal the output of individuals in each.

The average amount received by California miners in 1944 was \$23.71 per unit WO₃, compared with \$23.26 per unit WO₃ in 1943; \$24.16 per unit WO₃ in 1942; \$23.77 per unit of WO₃ in 1941; and \$21.15 per unit of WO₃ in 1940.

Tungsten ores have been produced in California principally in the Atolia-Randsburg district in San Bernardino and Kern counties, and the Bishop district in Inyo County; with smaller amounts having come from near Posey (Jack Ranch), Tulare County; Benton, Mono County; the Kings River district in Fresno County; in eastern San Bernardino County near Goffs and Ivanpah; the Grass Valley district in Nevada County; and recently added to the above is the Darwin district in Inyo County; the Kernville and Weldon districts in Kern County; Topaz Lake district in Mono County; and near Warm Springs, San Diego County. Also there are known occurrences of tungsten ores in Alpine, Calaveras, El Dorado, Mariposa, Madera, Plumas, Riverside, Shasta, and Tuolumne counties, of which several are now in production. It also should be considered that in the last ten years there have been more new tungsten deposits discovered than any other type of mineral deposit in this State. Nearly all the ore mined in California has been scheelite (calcium tungstate), although wolframite (iron-manganese tungstate), hübnerite (manganese tungstate), and other tungsten minerals are found in small amounts, in part associated with the scheelite.

Total Tungsten Ore Production of California

The annual amount and value of tungsten ores and concentrates produced in California since the inception of the industry is given herewith, with tonnages recalculated to 60% WO_3 :

Tungsten Production of California by Years

Year	Tons at 60% WO_3	Value	Average unit WO_3 value	Year	Tons at 60% WO_3	Value	Average unit WO_3 value

VANADIUM

Bibliography: Reports XV, XXVI. Bulletins 67, 91. Proc. Colo. Sci. Soc., Vol. XI, XXXVI. U. S. Bur. of Mines, Bulletin 104.

No commercial production of vanadium has yet been made in California. Occurrences of this metal have been found at Camp Signal, near Goffs, in San Bernardino County, and two companies at one time did considerable development work in the endeavor to open up paying quan-

tities. Some ore carrying lead vanadate has been developed in the 29 Palms, or Washington district, on the line between Riverside and San Bernardino counties, but no shipments reported.

The principal use of vanadium is as an alloy in steels, especially in tool steel, and in those varieties where resistance to repeated strains is required. Present (Sept. 13, 1945) New York quotations for ferro-vanadium are \$2.75-\$2.90 per pound of vanadium f.o.b. works, and vanadium ore 27½¢ per pound V₂O₅ contained f.o.b. shipping point.

ZINC

Bibliography: State Mineralogist Reports XIV, XV, XVII, XVIII, XX-XXIV, XXVI, XXVII, XXX, XXXIII-XXXV (inc.). Bulletins 38, 67, 91.

The recoverable zinc metal mined in California during 1944 amounted to a total of 16,456,103 pounds valued at \$1,875,996 and came from properties in eight counties. The 1944 output was an increase in both amount and value over that of 1943, which was 5,170,627 pounds worth \$558,427, and was only exceeded in value by that of 1916.

Distribution of the 1944 zinc output by counties is as follows:

County	Pounds	Value
Butte.....	2,945,519	\$335,789
Calaveras.....	2,172,165	247,627
Inyo.....	1,294,165	147,535
Kern.....	8,532	973
Mariposa.....	6,688,655	762,507
Orange.....	98,279	11,203
San Bernardino.....	235,448	26,841
Shasta.....	3,013,340	343,521
Totals.....	16,456,103	\$1,875,996

Primary zinc produced in the United States¹ during 1944 amounted to 893,975 short tons valued at \$157,954,000, compared with 942,309 short tons worth \$170,370,000 in 1943. Consumption of slab zinc in the United States in all industries during 1944 totaled 888,626 short tons, compared with 816,777 short tons in 1943.

The zinc ores in Shasta and Calaveras counties are associated with those of copper, while those of Inyo, Los Angeles, Orange, San Bernardino, and Tulare were associated principally with lead-silver and zinc-silver ores.

¹ U. S. Bureau of Mines, Mineral Market Report 1316, July 4, 1945.

Total Zinc Production of California

Total figures for zinc output of the State are as follows, commercial production dating back only to 1906 :

Year	Pounds	Value	Year	Pounds	Value
1906.....	206,000	\$12,566	1926.....	20,447,559	\$1,533,568

CHAPTER FOUR

STRUCTURAL MATERIALS

Bibliography: State Mineralogist Reports XII-XXXVIII (inc.). Bulletin 38. Spurr and Wormser, "Marketing of Metals and Minerals." "Non-Metallic Minerals," by R. B. Ladoo. "Industrial Minerals and Rocks," A. I. M. E., 1937. See also under each substance.

As indicated by this subdivision heading, the mineral substances herein considered are those more or less directly used in building and structural work. California is independent, so far as these are concerned, and almost any reasonable construction can be made with materials produced in the State. Chromite, which previous to 1933 was listed under structural materials in the statistical reports of the State Division of Mines, has been transferred to the metals group, thus coinciding with the practice of the United States Bureau of Mines.

Lime, previous to 1942, which was carried under this group, is now combined with limestone in the industrial group, so as to avoid possible duplication and because most of the lime is used in industry and not in construction. This "structural" branch of the mineral industry for 1944 had a total value of \$50,777,220, compared with \$55,055,016 in 1943. Granite, marble, miscellaneous stone, sandstone, slate, and tube-mill pebbles registered an increase in total value in 1944 over that of 1943; while all other substances in this group showed a decreased output.

In 1944 all counties but one, namely Kings, contributed to the structural materials total. There is not a county in the fifty-eight counties of the State which is not capable of producing at least one of the materials under the classification.

The following summary shows the value of the structural materials produced in California during the years 1943-1944, with increases or decreases in each instance:

Substance	1943		1944		Increase + Decrease— Value
	Amount	Value	Amount	Value	
Brick and hollow building tile.....		\$4,368,675		\$3,930,662	\$438,013—
Cement.....	18,515,085 bbls.	27,865,466	14,599,752 bbls.	21,249,520	6,615,946—
Granite.....		148,160		222,943	74,783+
Miscellaneous stone.....	32,599,456 tons	21,716,223	35,370,143 tons	25,138,003	3,421,780+
Unapportioned.....		^a 956,492		^b 236,092	720,400—
Total value.....		\$55,055,016		\$50,777,220	
Net decrease.....					\$4,277,796—

^a Includes bituminous rock, magnesite, sandstone, slate, paving blocks, tube-mill pebbles.

^b Includes bituminous rock, magnesite, marble, sandstone, slate, tube-mill pebbles.

ASPHALT

Bibliography: State Mineralogist Reports VII, X, XII-XV (inc.), XVII, XVIII. Bulletins 16, 32, 63, 67, 69, 91, 118.

Asphalt was for a number of years accounted for in the statistical reports by the State Mining Bureau, because in the early days of the oil industry, considerable asphalt was produced from outcroppings of

oil sand, and was a separate industry from the production of oil itself. However, at the present time most of the asphalt comes from the oil refineries, which produce a better and more uniform grade; hence, its value is not now included in the mineral total, as to do so would be in part a duplication of the crude petroleum figures. Such natural asphalt as is at present mined is in the form of bituminous sandstones, and is recorded under that designation.

BITUMINOUS ROCK

Bibliography: State Mineralogist Reports XII, XIII, XV, XVII, XVIII, XXI, XXII, XXV, XXVI, XXXI.

This material is essentially an uncemented sandstone which is saturated with and held together by a natural asphaltic constituent, probably the residue from the evaporation of a crude petroleum deposit. Bituminous rock is still used to a limited extent for road dressing in those districts adjacent to available deposits, though the manufacture of asphalt at the oil refineries has almost entirely superseded the direct use of the native material. Some of the Santa Cruz County production is put on the market as a material which can be laid cold. This material is especially applicable and valuable for patch jobs.

During 1944 the output of bituminous rock in California came from a single property in Santa Cruz County; the annual details are concealed under the 'Unapportioned' item so as not to reveal the output of either operator. The 1944 production showed a decrease in amount and value as compared with that of 1943.

Bituminous Rock Production of California, by Years

The following tabulation shows the total amount and value of bituminous rock quarried and sold in California, from the records compiled by the State Mining Bureau, annually since 1887:

Year	Tons	Value	Year	Tons	Value
1887	36,000	\$160,000	1917	5,590	\$18,580
1888	50,000	257,000	1918	2,561	9,067
1889	40,000	170,000	1919	4,614	18,537
1890	40,000	170,000	1920	5,450	27,825
1891	39,962	154,164	1921	8,298	43,192
1892	24,000	72,000	1922	4,624	13,570
1893	32,000	192,036	1923	2,945	11,780
1894	31,214	115,193	1924	6,040	14,922
1895	38,921	121,586	1925	2,681	10,724
1896	49,456	122,500	1926	3,863	21,577

BRICK AND HOLLOW TILE

Bibliography: State Mineralogist Reports VIII, X, XII-XV (inc.), XVII-XXVIII (inc.), XXXII, XXXVII. Bulletins 38, 39. Preliminary Report No. 7. Cal. Jour. of Development, June, 1925, pp. 5-6.

Bricks of many varieties and in important quantities are annually produced in California, as might be expected in a State with such diversified and widespread mineral resources. The varieties include common, fire, pressed, glazed, enamel, fancy, vitrified, sand-lime, and others. Not only do the plants here supply practically all of our own requirements in these products, but considerable quantities are shipped to contiguous territory and certain products are shipped over a much wider radius. We also include under this heading the various forms of hollow building 'tile' or blocks.

Brick and hollow building tile were manufactured in California during 1944 in 32 plants which reported production in 16 counties, of which there was a total of 65,546 M of common brick, valued at \$981,833; 37,754 M of fire brick 9 inch equivalent, valued at \$2,477,746; 7,276 M of glazed, pressed, vitrified, and fancy brick, valued at \$287,949; and 18,702 tons of hollow building tile, valued at \$183,134; the entire output having a total value of \$3,930,662. The 1944 production showed a decrease in amount and value of brick and building tile as compared with that of 1943, which was 70,219 M of common brick, worth \$840,921; 40,265 M of fire brick, worth \$3,174,868; 3,451 M of glazed, pressed, fancy, and vitrified brick, worth \$138,456; and 16,947 tons of hollow building tile, worth \$214,430; with a total value of \$4,368,675.

The 1944 output came from eleven plants in Los Angeles County; three in Contra Costa County; two each in Alameda, Kern, Sacramento, and San Joaquin counties; and one each in Amador, Fresno, Humboldt, Kern, Placer, Riverside, San Bernardino, San Diego, Santa Barbara, Santa Clara, and Tulare counties.

Brick and Hollow-Tile Production of California, by Years

Record of brick production in the State has been kept since 1893 by this Bureau, the figures for hollow building 'tile' or blocks being also included since 1914. The annual and total figures, for amount and value, are given in the following table:

Year	Brick, M	Hollow building blocks, tons	Value
1893	103,900		\$801,750
1894	81,675		457,125
1895	131,772		672,360
1896	24,000		524,740
1897	97,468		563,240
1898	100,102		571,362
1899	125,950		754,730
1900	137,191		905,210
1901	130,766		860,488
1902	169,851		1,306,215
1903	214,403		1,999,546
1904	281,750		1,994,740
1905	286,618		2,273,786
1906	277,762		2,538,848

CEMENT

Bibliography: State Mineralogist Reports VIII, IX, XII, XIV, XV, XVII, XVIII, XXI-XXVIII (inc.), XXXII. Bulletin 38.

During 1944 the production of cement in California totaled 14,599,752 barrels, valued at \$21,249,520 f.o.b. plant, of which 6,509,279 barrels, worth \$9,103,749, came from six northern California mills, and 8,090,473 barrels, worth \$12,145,726, came from six southern California mills. The 1944 output was a decrease in both amount and value from that of 1943, which amounted to 18,515,085 barrels valued at \$27,865,466.

Shipments of cement during 1944 were made from thirteen mills in eleven counties to the extent of 14,947,713 barrels, valued at \$22,482,794 f.o.b. plant, as compared with 17,804,421 barrels, worth \$27,500,347 in 1943. During the year seven mills operated in northern California; one each in Calaveras, Contra Costa, Merced, San Benito, San Mateo, Santa Clara, and Santa Cruz counties, which shipped a total of 6,779,987 barrels, valued at \$10,211,086; and six mills in southern California; three in San Bernardino County and one each in Kern, Los Angeles,¹ and Riverside counties, which shipped a total of 8,167,726 barrels, valued at \$12,271,708.

A mill in San Bernardino County which has been idle for several years resumed production during the year, also a small shipment of cement was made from the mill in San Benito County which discontinued operation in 1943. The mill in Merced County was sold and the company is being liquidated.

The annual capacity of the California cement mills according to the U. S. Bureau of Mines ² was 27,390,000 barrels as of January 1, 1945, as compared with 27,690,000 barrels for January 1, 1944. During the year an average of 2,379 men were employed in the above mills.

Cement Production of California, by Years

'Portland' cement was first commercially produced in California in 1891; though in 1860 and for several years following, a natural hydraulic cement from Benicia was utilized in building operations in San Francisco.

"The Benicia Cement Company in 1859-60 was turning out 50 to 100 barrels of cement a day and San Francisco was using about 12,000 barrels a year. The mill price of the product was then \$4 a barrel. By 1865, the San Francisco rate of consumption had increased to 100,000 barrels yearly, brick buildings largely taking the place of frame structures, and the price of cement had fallen to \$2.50 a barrel, about the same as it is today."³

The growth of the industry became rapid after 1902; since which time cement has continued to be an important factor in the industrial life of the State. Although the total cement figures, to date, are not of the same magnitude as those for gold and petroleum, it is interesting to note that the value of California's cement yield in the period 1920-1931 and 1942-1943 annually exceeded the value of her gold output.

¹ The plant in Los Angeles County grinds clinker coming from other counties, therefore the crude material is credited to the point of origin.

GRANITE

Bibliography: State Mineralogist Reports X, XII-XXVI (inc.), XXVIII, XXXI, XXXV-XXXVII (inc.) Bulletin 38.

The 1944 output of granite in California had a total value of \$222,843, as compared with a total value of \$148,160 in 1943. The 1944 production was 32,909 cubic feet of monumental and building stone valued at \$215,971, the remainder being a small amount of curbing and some tuff, and volcanic rock used as building stone. The above came from two quarries each in Placer and San Diego counties, and one quarry each in Fresno, Lassen, Riverside, San Bernardino, and Sonoma counties. The material from Sonoma County was tuff.

In recent years there has been a steady decline in the production of granite and other building stone, due to the increase of concrete construction, which is steadily replacing stone.

Varieties

For building purposes, the granite found in California, particularly the varieties from Raymond in Madera County, Rocklin in Placer County and near Porterville in Tulare County, are unexcelled by any similar stone found elsewhere. The quantities available, notably at Raymond and Porterville, are unlimited. Most of California's 'granite,' particularly that found in the Sierra Nevada Mountains, is technically 'granodiorite' (that is, both plagioclase and orthoclase feldspars are present).

Granites of excellent quality for building and ornamental purposes are also quarried in Riverside, San Bernardino, and San Diego counties. Near Lakeside, San Diego County, there is a fine-grained, 'silver gray' granite of uniform texture and color, especially suited for monumental and ornamental work.

The Fresno County stone is a dark, hornblende diorite, locally called 'black granite,' whose color permits of a fine contrast of polished and unpolished surfaces, making it particularly suitable for monumental and decorative purposes. There is also similar 'black granite' in Tulare County, near Success.

Granite Production of California, by Years

The value of granite produced, annually, since 1887 has been as follows:

Year	Value	Year	Value
1887.....	\$150,000	1917.....	\$221,997
1888.....	57,000	1918.....	139,861

LIME

Bibliography: State Mineralogist Reports XIV, XV, XVII-XXIX (inc.), XXXIII-XXXV (inc.). Bulletin 38.

The early output of lime in California was used entirely for structural purposes. Later a small percent was put out for chemical, agricultural, and industrial uses and still later lime replaced limestone in metallurgy. In 1942 the structural use had decreased to such a point and other uses increased to where they required the largest part of the lime burnt in this State, so it was decided to include lime with 'industrial' limestone in this statistical report.

Lime Production of California, by Years

The following tabulation gives the amounts and value of lime produced in California by years since 1894 when compilation of such records was begun by the State Mining Bureau. The figures for quantity have been recalculated from 'barrels,' as shown in the earlier reports, to 'tons' for the years 1894-1922 (inc.):

Year	Tons	Value	Year	Tons	Value
1894	37,350	\$318,700	1919	42,070	\$552,043
1895	39,776	386,094	1920	46,314	557,232
1896	30,275	261,505	1921	46,353	610,619
1897	28,780	252,900	1922	57,875	671,747
1898	29,786	254,010	1923	70,894	788,834
1899	29,985	314,575	1924	62,029	703,355
1900	31,252	283,699	1925	61,922	685,528
1901	31,738	334,688	1926	63,568	670,837
1902	44,866	369,616	1927	60,498	631,497
1903	49,659	418,280	1928	56,616	547,919
1904	57,945	571,749	1929	42,834	417,101
1905	61,700	555,322	1930	47,662	452,084
1906	68,927	763,060	1931	36,189	360,523
1907	68,422	756,376	1932	27,510	254,223

MAGNESITE

Bibliography: State Mineralogist Reports XII-XV (inc.), XVII-XXVII (inc.), XXX, XXXI, XXXIV, XXXVI-XXXVII. Bulletins 38, 79, 91. U. S. Geol. Surv., Bulletins 355, 540. Min. Res. 1913, Pt. II, pp. 450-453. Min. & Sci. Press, Vol. 114, p. 237. "Magnesite"—Hearings before Comm. on Ways and Means, House of Repr., on H. R. 5218, June 16, 17, and July 17, 1919. Eng. Soc. W. Penn., Proc. 1913, Vol. 29, pp. 305-388, 418-444. Eng. & Min. Jour.-Press, Vol. 114, July 29, and Dec. 2, 1922. U. S. Tariff Comm., "Crude and Caustic Calcined Magnesite. A Preliminary Statement of Information," May 19, 1926.

During 1944 magnesite was produced in California from a single property each in Santa Clara, and Stanislaus counties. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of a single company. Practically all the above was shipped in the calcined form.

The 1942-1943 output of magnesite in California showed a total of 198,259 net tons of crude magnesite valued at \$1,821,978, of which only a small amount was sold as such. Most of the material was calcined before being marketed. Operators reported a total of 74,099 tons calcined products valued at \$2,991,681 f.o.b. rail shipping point was made during 1942-1943, and was deadburned for refractories and in part, material for the plastic trade.

In California the known deposits are mostly in the metamorphic rocks of the Coast Ranges and the Sierra Nevada, being associated with serpentine areas. The notable exceptions are the sedimentary deposits at Bissell in Kern County and at Afton in San Bernardino County. Several thousand tons have been shipped from the Bissell deposit; and small shipments have been made from the Afton property. Beginning in 1938, a portion of the market for calcined magnesite is being supplied by magnesium oxide produced from salt-works bitters

at a plant at Newark, Alameda County, on San Francisco Bay and in 1942 a plant started operations at Moss Landing in Monterey County using sea water and dolomite to manufacture an artificial periclase. The figures for the crude of above tonnage are included under those for magnesium salts in the Salines chapter.

Total Magnesite Production of California

The first commercial production of magnesite in California was made in the latter part of 1886 from the Cedar Mountain district,¹ southeast of Livermore, Alameda County. Shipments amounting to 'several tons' or 'several carloads' were sent by rail to New York; but there is apparently no exact record of the amount for that first year. The statistical records of the State Mining Bureau began with the year 1887, and the table herewith shows the figures for amount and value, annually, from that time. Shipments of magnesite from Napa County began in 1891 from the Snowflake Mine; from the Red Mountain deposits in Santa Clara County, in 1899; and from Tulare County in 1900.

Total Magnesite Production of California

MARBLE

Bibliography: State Mineralogist Reports XII-XV (inc.), XVII-XXX (inc.), XXXIV, XXXV, XXXVII. Bulletin 38. U. S. Bur. of Mines Bull. 106.

In recent years the marble output has been showing a steady decline as has that of other building stone. The presence of artificial marbles

¹ See U. S. Geol. Surv.; Mineral Resources of U. S., 1886, pp. 6 and 696.

and of terrazzo which are cheaper is probably the major factor for this. During 1944 in California there was a production of marble from a single property in Inyo County, the annual details are concealed under the 'Unapportioned' item so as not to reveal their output. In 1943 there was no marble reported quarried in this State. This being the first year since 1887, when the first record of the marble industry was made in this State, that there was no output.

California has many beautiful and serviceable varieties of marble, suitable for almost any conceivable purpose of construction or decoration. In the decorative class are deposits of onyx marble of beautiful coloring and effects. There is also serpentine marble suitable for electrical switchboard use.

Marble Production of California, by Years

Data on annual production since 1887, as compiled by the State Mining Bureau, follows. Previous to 1894 no records of amounts were preserved.

Total Production of Marble in California, by Years

Year	Cubic feet	Value	Year	Cubic feet	Value

ONYX AND TRAVERTINE

Bibliography: State Mineralogist Reports XII-XV (inc.), XVII, XVIII, XXI, XXIII, XXXI, XXXIV. Bulletin 38.

Onyx and travertine are known to exist in a number of places in California, but there has been only a small and irregular production since the year 1896. During 1944 no onyx or travertine was reported shipped. In 1942 there was one producer of travertine in Solano County, the figures of which are combined with marble. This material is used in terrazzo and for ornamental purposes.

Onyx Production of California, by Years

Production by years has been as follows :

Year	Value	Year	Value
1887	*	1926	\$7,575
1888	\$900	1927	*
1889	900	1928	*

SANDSTONE

Bibliography: State Mineralogist Reports XII-XV, XVII, XVIII, XXI, XXIII, XXVI-XXVIII (inc.), XXXIV, XXXV. Bulletin 38. U. S. Bur. of Mines, Bull. 124.

An unlimited amount of high-grade sandstone is available in California, but the wide use of concrete in buildings of every character, as well as the popularity of a lighter-colored building stone, has curtailed production in this branch of the mineral industry during recent years almost to the vanishing point. During 1944 sandstone as reported in California came from two quarries in Monterey County. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of either producer. The 1943-1944 output totaled 1,124 cubic yards of sandstone valued at \$7,415 at the quarry.

Practically all of the material was flagstone which is used in garden walks, fountains, walls and fireplaces to give effect to Spanish and English types of homes. The material reported from Monterey and San Luis Obispo counties is in reality an indurated shale of the Monterey series, of a cream color and utilized as a building stone.

Sandstone Production of California, by Years

Amount and value, so far as contained in the records of this Bureau, are presented herewith, with total value from 1887 to date :

Year	Cubic feet	Value	Year	Cubic feet	Value
1887		\$175,000	1917	31,090	\$7,074
1888		150,000	1918	900	400
1889		175,598	1919	5,400	3,720
1890		100,000	1920	10,500	2,300
1891		100,000	1921	10,150	2,112
1892		50,000	1922	900	1,100
1893		26,314	1923	7,000	13,000
1894		113,592	1924	6,700	3,600
1895		35,373	1925	14,704	14,362

SERPENTINE

Bibliography: State Mineralogist Report XV. Bulletin 38.

Serpentine has not been produced in California to a very large extent at any time. A single deposit, that on Santa Catalina Island, has yielded the principal output to date. Some material was shipped from there in 1917 and 1918, being the only output recorded since 1907. It was used for decorative building purposes and for electrical switchboards. As there was but a single operator, the figures were combined with those of marble output for those years.

The production of serpentine prior to 1919 was 'verde antique' which is used as an ornamental stone and often classed as a marble. In recent years experimental tests have proved several possible commercial applications to which this mineral might be put such as an admix in cement, in the manufacture of magnesium chemicals, in terrazzo, as a substitute for soapstone, and as a filler. During 1938 there was a small shipment of serpentine from one property in San Bernardino County. The annual details are concealed in the 'Unapportioned' item so as not to reveal the output of an individual.

Serpentine Production of California, by Years

The following table shows the amount and value of serpentine from 1895 as recorded by this bureau:

Serpentine Production in California, by Years

Year	Cubic feet	Value	Year	Cubic feet	Value
1895.....	4,000	\$4,000	1905.....		
1896.....	1,500	6,000	1906.....	847	\$1,694

SLATE

Bibliography: State Mineralogist Reports XV, XVIII, XXIV, XXVIII, XXXIV. Bulletin 38. U. S. Geol. Surv., Bull. 586. U. S. Bur. of Mines, Bull. 218.

Slate was first produced in California in 1889. Up to and including 1910 such production was continuous, but since then it has been irregular. Large deposits of excellent quality are known in the State, especially in El Dorado, Calaveras and Mariposa counties, but the demand has been light owing principally to competition of cheaper roofing materials.

As the 1944 slate output in California came from a single property in El Dorado County, the annual details are concealed under the 'Unapportioned' item so as not to reveal the production of an individual. The 1944 production showed an increase in both amount and value over that of 1943. The 1943-1944 output totaled 17,309 net tons valued at \$102,851.

Total Production of Slate in California

A complete record of amount and value of slate produced in California follows:

Year	Squares	Value	Year	Squares	Value
1889.....	4,500	\$18,089	1920.....	8	\$80

MISCELLANEOUS STONE

Bibliography: State Mineralogist Reports XII-XXVIII (inc.), XXXI-XXXII, XXXV-XXXVII. Bulletin 38; also annual statistical bulletins from 1915 to date.

'Miscellaneous stone' is the name used throughout this report as the title for that branch of the mineral industry covering crushed rock of all kinds, paving blocks, sand and gravel, and pebbles for grinding mills. The foregoing are very closely related from the standpoint of the producer; therefore it has been found to be most satisfactory to group these items as has been done in recent reports of this Bureau. So far as it has been possible to do so, crushed rock production has been subdivided into the various uses to which the product was put. It will be noted, however, a very large percentage of the output has been tabulated under the heading 'Unclassified.' This is necessary because of the fact that many of the producers have no way of telling to what specific use their rock was put (or at least the proportions to each use) after they have quarried and sold the same to distributors and contractors.

In addition to amounts produced by commercial firms, both corporations and individuals, there is hardly a county in the State but uses more or less gravel and broken rocks on its roads. Of much of this, particularly in the country districts, there is no definite record kept.

As reported to the Division of Mines by producers during 1944, there was a total of 35,370,143 net tons of miscellaneous stone, including sand, gravel, crushed rock, rubble and riprap produced in California, valued at \$25,138,003, as compared with 32,599,456 tons, worth \$21,716,223 in 1943. Alameda County led all counties in 1944 as to value of miscellaneous stone with an output worth \$6,112,065. Los Angeles County was second with an output worth \$4,596,097, San Diego County third with an output worth \$1,629,510, followed in turn by Riverside and Sacramento counties each with a production worth over a million dollars. Under this heading every county in the State contributed in 1944 with the exception of Kings County.

Paving Blocks

During 1944 there was no production of paving blocks reported in California. The 1943 output of paving blocks came from a single quarry in Sacramento County. The annual details are concealed under the 'Unapportioned' item so as not to reveal production of either operator.

The paving block industry has decreased materially of recent years, practically to the vanishing point, because of the increased construction of smoother pavements demanded by motor vehicle traffic. The blocks made in Solano County were of Basalt; those from Sonoma were of basalt, andesite, and some trachyte, while those from Madera, Placer, Riverside, San Bernardino, and San Diego were of granite; and those from San Mateo County were of a sandstone.

The amount and value of paving block production, annually, since 1887 has been as follows:

Year	Amount M	Value	Year	Amount M	Value
1887-----	*10,000	\$350,000	1916-----	1,322	\$54,362
1888-----	10,500	367,500	1917-----	938	38,567
1889-----	7,303	297,236	1918-----	372	17,000
1890-----	7,000	245,000	1919-----	27	1,350
1891-----	5,000	150,000	1920-----	63	3,155
1892-----	*3,000	96,000	1921-----	4	280
1893-----	2,770	96,950	1922-----	72	3,924
1894-----	2,517	66,981	1923-----	15	880
1895-----	2,332	73,338	1924-----	11	935

1915-----	3,285	171,092			

* Figures for 1887-1892 (inclusive) are for Sonoma County only, as none are available for other counties during that period though Solano County quarries were then also quite active.

a Annual details concealed under 'Unapportioned.'

Grinding-Mill Pebbles

The 1944 output of grinding-mill pebbles in California came from a single property in San Diego County. The annual details are combined under the 'Unapportioned' item so as not to reveal the output of an individual. The 1944 production was an increase in amount and value as compared with that of 1943 which came from two properties in San Diego County and one in Calaveras County.

The amount and value of grinding-mill pebbles, annually, follows:

Year	Tons	Value	Year	Tons	Value
1915-----	340	\$2,810	1931/-----		
1916-----	20,232	107,567	1932/ *-----	25	\$211
1917-----	21,450	90,538	1933/-----		
1918-----	8,628	61,268	1934/ *-----	300	3,018
1919-----	2,607	19,272	1935/-----

* Annual details concealed under 'Unapportioned.'

Sand and Gravel

A considerable part of the gravel excavated is passed through grading and washing plants, and the material over 2 inches in size is crushed. Much of it is utilized in concrete mixtures. Most of the gravel used for road surfacing and repairs as well as that for railroad ballast is creek-run or pit-run material which is spread upon the roads without undergoing any grading or washing.

The 1944 sand and gravel output totaled 21,318,163 tons, valued at \$13,217,071, as compared with 21,672,727 tons, worth \$13,726,756 in 1943.

Included in the above is a total of 97,444 net tons of molding sand, valued at \$306,412 which came from a single property each in Contra Costa, Monterey, Orange, Riverside, Sacramento, San Diego, San Mateo, Santa Barbara, and Ventura counties. The 1944 output showed an increase in amount with a decreased value as compared with that of 1943, which was 80,297 tons worth \$316,577.

The distribution of the 1944 output of sand and gravel by counties is as follows:

County	Tons	Value
Alameda.....	3,231,372	\$2,224,850

* Combined to conceal output of producers in each.

^a Includes molding sand.

^b Includes filter sand.

^c Includes blast sand.

Crushed Rock

To list the kinds and varieties of rock utilized commercially under this heading would be to run almost the entire gamut of the classification scale. Much depends on the kind available in a given district. Those which give the most satisfactory service are the basalts and other hard, dense, igneous rocks which break with sharp, clean edges. In many localities, river-wash boulders form an important source of such material. In such cases, combined crushing and washing plants obtain varying amounts of sand and gravel along with the crushed sizes. In Sacramento and Butte counties the tailings piles from the gold dredgers are the basis of like operations.

The values given are based on the selling price, f.o.b. cars, barges, or trucks, at the quarry. The 1944 output amounted to 14,051,980 tons, valued at \$11,920,932, as compared with 10,926,729 tons, worth \$7,989,467 in 1943. The accompanying table gives the breakdown of crushed rock by counties for 1944.

Quarry and Plant of Granite Rock Company, Logan Siding, San Benito County

A comparison of the above table of annual production of these materials with the similar table for cement (see *ante*) reveals the fact that the important growth of the crushed rock and gravel business was coincident with the rapid development of the cement industry from the year 1902.

CHAPTER FIVE

INDUSTRIAL MATERIALS

Bibliography: State Mineralogist Reports XII-XXXVII (inc.). Bulletin 38. Min. & Sci. Press, Vol. 114, March 10, 1917. Spurr and Wormser, "Marketing of Metals and Minerals." "Non-Metallic Minerals," by R. B. Ladoo. "Industrial Minerals and Rocks," A. I. M. E., 1937. See also under each substance.

The following mineral substances have been arbitrarily arranged under the general heading of 'Industrial Materials,' as distinguished from those which have clearly a defined classification, such as metals, salines, structural materials, etc.

These materials, many of which are mineral earths, are, with four or five exceptions, as yet produced on a comparatively small scale. The possibilities of development along several of these lines are large, and with increasing transportation and other facilities, together with steadily growing demands, the future for this branch of the mineral industry in California is promising. There is scarcely a county in the State but might contribute to the output.

Up to within the last few years, at least, production has been in the majority of instances dependent upon more or less of a strictly local market, and the annual tables show the results of such a condition, not only in the widely varying amounts of a certain material produced from year to year, but in widely varying prices of the same material.

The more important of these minerals thus far exploited, so far as shown by value of the output, are barytes, bentonite (fuller's earth), pottery clay, diatomite, dolomite, gypsum, limestone, mineral water, pumice and volcanic ash, pyrite, silica, and soapstone and talc.

In 1937 the mineral zircon was added to this group. The material mined was used as an abrasive and a refractory.

This group as a whole showed an increase in total value from \$10,656,288 in 1943 to \$11,515,327 in 1944, with all principal mineral substances showing an increased output but diatomite and mineral water.

The following table gives the comparative figures for the amounts and value of industrial minerals produced in California during the years 1943 and 1944.

Substance	1943		1944		Increase+ Decrease— Value
	Amount	Value	Amount	Value	
Bentonite.....	11,480 tons	\$118,257	25,581 tons	\$180,065	\$61,808+

ASBESTOS

Bibliography: State Mineralogist Reports XII-XIX (inc.), XXII, XXVII (inc.), XXIX, XXXI-XXXII, XXXIV-XXXVII (inc.). Bulletins 38, 91. Canadian Dept. of M., Mines Branch Bulletin 69. Min. and Sci. Press, April 10, 1920, pp. 531-533. Eng. & Min. Jour.-Press, Vol. 113, pp. 617-625, 670-677. Asbestology, Vol. 5, No. 7, July, 1927.

During 1944 there was a production of asbestos in California coming from a single property each in Napa, Placer, and Shasta counties. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of either producer. In addition to the two producing properties there was a property each in Placer and San Benito counties under development in preparation for future production. The 1944 output was a decrease in amount and value as compared with that of 1943. The total of the 1943-1944 output was 723 net tons valued at \$15,000.

Of the 1943 and 1944 production, that coming from Napa County was the chrysotile variety and that from Placer and Shasta counties was tremolite asbestos.

There are two varieties of asbestos, amphibole and serpentine. The most valuable and widely used is the serpentine or chrysotile variety. Chrysotile asbestos has short strong fibers varying in length from $\frac{1}{8}$ of an inch to three inches but mostly less than one inch. The value of the material varies greatly as to the length of the fiber; the longer demanding a premium. It is used as insulation for heat and electricity, in brake linings, steam packing, pipe coverings, in paint, waterproof paper roofing, cement, stucco, and plasters, in heat resisting textiles, as gloves, curtains, cord, etc.

The amphibole variety may be any one of several minerals of the amphibole group. The fibers of this type are weak and often brittle, and they are much more abundant but their uses are limited and value small, being restricted to heat insulation, chemical filters, and sometimes as a filler.

Asbestos Production of California, by Years

Total amount and value of asbestos production in California since 1887, as given in the records of this Bureau, are as follows:

Year	Tons	Value	Year	Tons	Value
1887	30	\$1,800	1915	143	\$2,860
1888	30	1,800	1916	145	2,380

BARITE

Bibliography: State Mineralogist Reports XXII, XIV, XV, XVII, XXI-XXVIII (inc.), XXXIV-XXXV (inc.), XXXVII. Bulletins 38, 87. Eng. & Min. Jour.-Press, Vol. 114, p. 109, July 15, 1922; Vol. 115, pp. 319-324, Feb. 17, 1923. U. S. Bureau of Mines, inform. Circ. 6221, 6223.

During 1944 the barite (including some witherite) produced in California came from two properties, one each in Mariposa and Nevada counties, the annual details being concealed in the 'Unapportioned' items so as not to reveal the output of either operator. This material was consumed in the manufacture of lithopone, a heavy-gravity oil-well drilling-mud, fillers, and barium chemicals.

The 1944 output showed an increase in amount and value as compared with that of 1943. Commercial production of barite for the years 1942 and 1943 totaled 53,625 net tons valued at \$311,910.

Barite's largest use in the United States is in the manufacture of lithopone, which is a chemically-prepared white pigment containing approximately 70% barium sulphate and 30% zinc sulphide. This is one of the principal constituents of 'flat' wall paints. Other important uses for barite, after washing and grinding, are as an inert pigment and filler in paint, paper, linoleums, oilcloth and rubber manufacture, and in the preparation of a number of chemicals including barium binocide, carbonate, chloride, nitrate, the sulphate precipitated, or 'blanc fixe,' and in medicine.

Present (Aug. 10, 1944) quotations for barite (95% BaSO₄) vary from \$8.50 to \$9.00 per ton, crude, f.o.b. rail shipping point. Most barite has to be washed and acid treated to remove iron stains or other impurities before being suitable for paint use.

Known occurrences of this mineral in California are located in Inyo, Los Angeles, Mariposa, Monterey, Nevada, San Bernardino, Shasta,

Santa Barbara and Tulare counties. The deposit at El Portal, in Mariposa County, has given the largest commercial production to date, in part witherite (barium carbonate, BaCO₃). Witherite has also been found in Shasta County, but no shipments have yet been made from the deposit. The carbonate is especially desirable, as it is a simpler and hence a cheaper source for preparation of barium chemicals, notably the nitrate which is used in priming mixture for incendiary bombs.

Total Barite Production of California

The first recorded production of barite in California, according to the statistical reports of the State Mining Bureau, was in 1910. The annual figures are as follows:

Year	Tons	Value	Year	Tons	Value
1910.....	860	\$5,640	1928.....	13,406	\$55,888
1911.....	309	2,207	1929.....	26,796	168,829

BENTONITE (Fuller's Earth)

Bibliography: State Mineralogist Reports XIV, XVII, XVIII, XXI, XXIII, XXV-XXVI (inc.), XXXIV, XXXVI-XXXVII. Bulletins 83, 91. U. S. Bureau of Mines, Bulletin 71, Technical Paper 609. Eng. & Min. Jour.-Press, Vol. 121, pp. 837-842, May 22, 1926.

Bentonite produced in California during 1944 amounted to a total of 25,581 net tons, valued at \$180,065, and came from three properties in Inyo County, two properties in San Bernardino County; and one in Kern County. The 1944 output showed an increase in amount and value as compared with that of 1943, which was 11,480 tons, worth \$118,257, and came from two properties in San Bernardino County, and one each in Kern and San Diego counties.

Previous to 1931 the Division of Mines classed this material under the heading of 'fuller's earth,' but it was thought advisable to change the name to bentonite, owing to the fact that much bentonite is employed in uses that can not be classed as fuller's earth and therefore had been classified in these reports under pottery clay. This was somewhat confusing. Bentonite is the name commonly applied to the clays of the montmorillonite and halloysite group ('rock soap').

Fuller's earth includes many kinds of unctuous clays. It is usually soft, friable, earthy, nonplastic, white and gray to dark green in color, and some varieties disintegrate in water. Production has come mainly

from Calaveras and Solano counties, with other deposits noted also in Riverside, Fresno, Inyo and Kern counties.

Bentonite Production of California, by Years

Bentonite including a small amount of fuller's earth was first produced commercially in this State in 1899, and the total amount and value of the output since that time are as follows:

Year	Tons	Value	Year	Tons	Value
1899-----	620	\$12,400	1923-----	3,650	\$55,125
1900-----	500	3,750	1924-----	5,290	67,295
1901-----	1,000	19,500	1925-----	5,280	91,842
1902-----	987	19,246	1926-----	23,552	250,192
1903-----	250	4,750	1927-----	13,018	154,764
1904-----	500	9,500	1928-----	53,232	501,743
1905-----	1,344	38,000	1929-----	15,541	170,563
1906-----	440	10,500	1930-----	12,522	177,964

CALCIUM SILICATE

Bibliography: State Mineralogist Report XXXIV, Mining and Metallurgy: Oct., 1935.

During 1944 no output of calcium silicate was reported in California but in 1941 one property in Kern County made some shipments to their mineral wool plant.

The annual details are concealed in the 'Unapportioned' item so as not to reveal its output.

The first commercial production of wollastonite was made in 1933 from a deposit operated by John T. Thorndyke in the Radamacher District in Kern County, and was shipped from Code's Siding to Los Angeles, where it was used to manufacture mineral wool. This was done by a new process in an electric furnace where the material is melted without the use of a flux and then blown to a fine fiber or wool by compressed air from jets. Mineral wool is an excellent insulating material for sound, heat and cold, and the manufacturer expects to use large quantities in proposed steel houses. This material, also, can be used in the manufacture of unbreakable glass.

Pyroxene is a silicate of calcium and magnesium and is found in crystalline limestone near the contact with intrusive igneous rocks and in basic igneous rocks such as gabbros. It is white to various shades of green, brown to black, having a hardness of 5 to 6 and a specific gravity 3.2 to 3.6.

Wollastonite is a calcium metasilicate (CaSiO_3) and usually found in crystalline limestone at the contact with intrusive igneous rocks. It is a white to gray mineral, having a hardness of $4\frac{1}{2}$ to 5 and a specific gravity of about 2.9.

Calcium silicate from 1934 to 1936 was classed in these California mineral production reports as wollastonite.

CARBON DIOXIDE GAS

Bibliography: State Mineralogist Reports XII, XXXVIII.

Carbon dioxide produced during 1943 in California came from wells operated by two companies near Niland, Imperial County, and by one company near Hopland, Mendocino County. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of any individual company. The 1944 production showed a slight increase in both amount and value as compared with that of 1943, which was 227,424 M cu. ft. of carbon dioxide gas which was compressed to make 14,037 net tons of dry ice, valued at \$248,126.

Carbon dioxide gas is found many places in nature and is produced commercially from wells and springs whose waters are highly charged with the gas. It is used as a gas in the manufacture of carbonate beverages and dry ice, and in the chemical reduction of carbonates; as dry ice and liquefied as a refrigerant, as a source of power, and in the chemical industry. It has been stated that the amount of butyl rubber is only limited by the amount of dry ice available.

Carbon dioxide gas was first produced commercially in California in 1894. This material came from a drift on the 575 level of the Santa Isabel shaft of the New Almaden Quicksilver mine at Almaden, Santa Clara County. The drift was bulkheaded and a pipe was placed through the bulkhead for the gas to be drawn off, it then being compressed into cylinders and used in the manufacture of soda water.

In 1933 carbon dioxide gas was again produced, this time from wells drilled near Niland, Imperial County. On November 1, 1934, a dry-ice plant was put into operation for condensation of the carbon dioxide produced from the above wells.

Carbon Dioxide Gas Production in California, by Years

CLAY (Pottery)

Bibliography: State Mineralogist Reports I, IV, IX, XII-XV, XVIII-XXVIII (inc.), XXX-XXXIII (inc.), XXXV-XXXVII (inc.). Bulletins 38, 99. Preliminary Report No. 7, U. S. Bureau of Standards, Tech. Paper No. 262.

At one time or another in the history of the State, pottery clay has been mined in thirty-seven of its counties. Of these, 18 contributed in 1944. In this report, 'pottery clay' refers to all clays used in the manufacture of red and brown earthenware, china and sanitary ware, flower pots, floor, faience and ornamental tiling, architectural terra cotta, sewer pipe, drain and roof tile, etc., and the figures for amount and value are relative to the crude material at the pit without reference to whether the clay was sold in the crude form or was immediately used in the manufacture of any of the above finished products by the producer. It does not include clay used in making brick and hollow building blocks.

There are many other important uses for clay besides pottery manufacture. Among these may be enumerated paper, cotton goods, and chemicals. Clays of the montmorillonite and halloysite group ('rock soap') are being utilized successfully in the manufacture of soaps and for filtering oils and as oil-well drilling mud, also as an earth filler in irrigating ditches which run through porous ground.

Because of the fact that a given product often requires a mixture of several different clays, and that these are not all found in the same pit, it is necessary for most clay-working plants to buy some part of their raw materials from other localities. For these reasons, in compiling the clay industry figures much care is required to avoid duplications. So far as we have been able to segregate the figures, from the data sent in by the operatives, we have credited the clay output to the counties from which the raw material originated; and have deducted tonnages used in brick manufacture, as bricks are classified separately, herein.

During 1944 thirty-five properties operated in 18 counties in California, and reported an output of 491,363 net tons of pottery clay, valued at \$1,241,652, f.o.b. shipping point for crude material; as compared with 41 properties in 18 counties producing 622,019 tons, worth \$1,185,240 in 1943.

A tabulation of the direct returns from the producers, by counties, for the year 1944 is shown herewith:

Pottery Clay in 1944

County	Tons	Value	Used in the manufacture of
Kern.....	^b 152,237	\$522,711	Oil-well drilling mud.
Los Angeles.....	^b 61,640	85,007	Red earthenware, chimney, drain and sewer pipe; vents; floor, mantel, and roofing tile, art pottery; oil-well drilling mud, and various.
Orange.....	^a 34,627	140,316	Architectural terra cotta; conduits and segment blocks; electrical, porcelain, and chinaware; refractories; vents; drain, floor, and mantel tile; art pottery; and various.
Riverside.....	74,650	197,478	Conduit sewer, and drain pipe, red earthenware; faience, floor, mantel, roofing tile; refractory, and various.
San Bernardino.....	3,873	31,716	Roofing, floor and mantel tile; drain and sewer pipe; red earthenware; refractories; fire sand and various.
Alameda, Amador ^a , Calaveras, Humboldt, Marin, Placer, Sacramento, Santa Barbara, Santa Clara, Stanislaus, Sutter, Ventura ^{b*}	164,336	265,424	Architectural terra cotta, drain, roofing, and mantel tile; saggars; electrical porcelain; refractories; red earthenware; garden furniture; oil-well drilling mud; sewer, drain, and conduit pipe; prepared clay, light weight aggregate; and various.
Totals.....	491,363	\$1,241,652	

^a Includes fire sand.^b Includes oil-well drilling mud.

* Combined to conceal the output of operators in each.

The above figures do not include clay reported as used in the manufacture of brick and hollow building tile or the bentonite clays, as these are included under separate headings.

POTTERY CLAY PRODUCTS

The output of ceramic products manufactured in California during 1944 had a total value of \$11,744,124, as compared with \$13,817,552 in 1943. The distribution by products for 1944 is shown in the following tabulation:

Product	Number of producers	Tons	Value
Architectural terra cotta.....	3		\$110,333
Chimney pipe and flue lining.....	6	2,477	230,147
Drain pipe.....	10	6,886	111,470
Sewer pipe (glazed).....	9	96,019	3,040,116
Floor, faience, mantel, and handmade tile.....	9		1,654,598
Roofing tile.....	9	5,245	112,480
Red earthenware.....	4		92,031
Stoneware and chemical stoneware.....	4		226,627
Chinaware and semi-vitreous tableware.....	5		3,402,255
Conduit.....	3		88,975
Fire-clay and high temperature cements.....	6	15,366	309,305
Miscellaneous: electric-stove blocks, vents, art pottery, garden furniture, sanitaryware, and plumbing fixtures, electrical porcelain, glass tank backs, grog, dolls, fire tile, clay, shapes, light-weight aggregate, segment blocks, glazed flower-pots, glazed kitchen ware, sundries, specialties, and various.....	12		2,365,787
Total value.....			\$11,744,124

Of the ceramic products, increases in total value were registered in 1944 by faience, floor, mantel and handmade tile; roofing tile; and conduit; all others showed a decline in value.

Pottery Clay Production of California, by Years

Amount and value of crude pottery clay output in California since 1887 are given in the following table:

Year	Tons	Value	Year	Tons	Value
1887	75,000	\$37,500	1917	166,298	\$154,602
1888	75,000	37,500	1918	112,423	166,788
1889	75,000	37,500	1919	135,708	245,019

DIATOMITE (Diatomaceous Earth)

Bibliography: State Mineralogist Reports II, XII-XV (inc.), XVII-XXVIII (inc.), XXXI-XXXIII, XXXV-XXXVI. Bulletins 38, 67, 91. Am. Inst. Min. Eng., Bull. 104, Aug. 1915, pp. 1539-1550. U. S. Bur. of Mines, Rep. of Investigations: Serial No. 2341, Jan. 1923. Eng. & Min. Jour.-Press, Vol. 115, pp. 1152-1154, June 30, 1923.

Diatomite, also known as diatomaceous earth, infusorial earth, tripolite and kieselguhr, is very light (when dry a cubic foot weighs 18 to 20 pounds) and extremely porous, chalk-like material composed of pure silica (chalk, being calcareous) which has been laid down under water and consists of the remains of microscopical infusoria and diatoms. The former are animal remains, and the latter are from plants.

The most important deposits in California thus far known are located in Los Angeles, Monterey, Orange, San Luis Obispo, and Santa Barbara counties. The diatomaceous earth of marine origin has proved of superior quality for filtration uses which bring the higher prices. Infusorial or diatomaceous earths are also found in Contra Costa, Fresno, Kern, Plumas, San Benito, San Bernardino, San Joaquin, Shasta, Sonoma, and Tehama counties.

As about 75 percent of the California output is from a single operator, we have concealed the exact figures under the 'Unapportioned' item in the State and county totals. There were three producing properties during 1944, two were in Santa Barbara County, and one in Los Angeles County. The shipments during the year showed a decrease in amount and value as compared with 1943.

The material shipped was utilized for insulation of both heat and sound, filtration, paint, pigment, cement admixture, filters, abrasives and for clarification of gasoline and kerosene.

Total Production of Diatomite in California

The first recorded production of these materials in California occurred in 1889; total amount and value of output, to date, are as follows:

Year	Tons	Value	Year	Tons	Value
1889.....	39	\$1,335	1918.....	35,963	\$189,459

DOLOMITE

Bibliography: State Mineralogist Reports XV, XVII, XXVII, XXVIII, XXXI, XXXIII-XXXIV.

The output of dolomite in California during 1944 totalled 217,018 net tons, valued at \$619,425, and came from two properties in Monterey County and one each in San Benito and Tuolumne counties. The value of the 1944 production was the largest on record of any in this State. The 1943 production amounted to 331,251 tons, worth \$472,756.

Most of the dolomite produced during the year was burnt to lime, this being used in the production of magnesia from sea water to be used in the reduction to magnesium metal and in magnesium refractories. Some of the raw dolomite was also used for steel-furnace flux and refractories, stucco dash, terrazzo and roofing granules, kalsomine, poultry grit, artstone, in the manufacture of mineral wool, and carbon dioxide.

Dolomite Production of California, by Years

Previous to the 1915 statistical report of the State Mining Bureau, dolomite was included under limestone, as the two minerals are closely related chemically; but since dolomite, as such, has been found to have certain distinctive applications, we here give it a separate classification.

Dolomite Quarry of Permanente Metals Company, at Natividad, Monterey County

FELDSPAR

Bibliography: State Mineralogist Reports XV, XVII-XXVIII (inc.), XXX, XXXI, XXXIV-XXXVII (inc.). Bulletins 67, 91. U. S. Bureau of Mines, Bulletin 92. Eng. & Min. Jour.-Press, Vol. 115, pp. 535-538, Mar. 24, 1923.

During 1944 feldspar was produced and shipped from two properties in California, one each in Fresno and San Bernardino counties, the annual details being concealed under the 'Unapportioned' item to conceal the output of a property. The production showed a decrease in amount and value from the previous year.

The 1943-1944 total output of feldspar was 4,090 net tons valued at \$11,152. Also produced is a large tonnage of glass feldspar which is contained in sands coming from Contra Costa, Monterey, and Riverside counties and is reported under glass sand and computed under silica, as the largest percentage of these sands is quartz. In 1944 from San Diego County was reported an output of feldspar which was stock-piled on the property, therefore the production was not included in the annual figures.

The requirements of the pottery trade demand that in general the percentage of free silica associated with the feldspar be less than 20 percent, and in some cases the potters specify less than 5 percent. An important factor, also, is the iron-bearing minerals frequently present in pegmatites and granites, such as biotite (black mica), garnet, hornblende and black tourmaline. Feldspar for pottery uses should be practically free of these. The white, potash-mica, muscovite, is not particularly objectionable except that being in thin, flexible plates, it does not readily grind to a fineness required for the feldspar. Feldspar is also used in the manufacture of glass, enamel and sanitary ware, in soaps and abrasives, and as a binder for abrasive wheels, etc., all of which have similar specifications to that for pottery.

Total Feldspar Production in California

Total amount and value of feldspar production in California since the inception of the industry are given in the following table, by years:

Year	Tons	Value	Year	Tons	Value
1910	760	\$5,720	1929	13,327	\$78,404
1911	740	4,560	1930	5,014	35,654
1912	1,382	6,180	1931	4,795	59,921
1913	2,129	7,850	1932	2,294	15,988
1914	3,530	16,565	1933}		
1915	1,800	9,000	1934}	2,655	30,611
1916	2,630	14,350	1935	3,265	21,855
1917	11,792	46,411	1936	3,430	24,959

FLUORSPAR

Bibliography: State Mineralogist Reports XVII, XVIII, XIV, XXVI. Bulletins 67, 91. Eng. & Min. Jour.-Press, Vol. 177, pp. 489-492, Mar. 22, 1924.

During 1944 there was a small amount of fluorspar shipped from the Red Bluff Fluorspar Mine 14 miles south of Rice, Riverside County. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of an individual operator.

Fluorspar, or calcium fluoride, CaF_2 , is one of the most important nonmetallic minerals from an industrial standpoint. About 80 percent of the commercial mineral is prepared in the 'gravel' form and utilized as a flux in the manufacture of steel, for which use no substitute has yet been found.

In California deposits have been reported in Los Angeles, Mono, Riverside and San Bernardino counties. A previous commercial production was made in 1917-1918, when a total of 79 tons valued at \$991 was shipped from Riverside County, and in 1933-1934 with 227 tons worth \$3,631 coming from San Bernardino County.

Present quotations (Metal and Mineral Markets, Sept. 13, 1945) are: not less than 85 percent CaF_2 and not over 5 percent SiO_2 , \$33 per ton; No. 2 lump, \$33 per ton, and acid grade 97.5 percent CaF_2 , \$37 f.o.b. mine.

GEMS

Bibliography: State Mineralogist Reports II, XIV, XV, XVII, XVIII, XX, XXI-XXVIII (inc.), XXX-XXXII (inc.), XXXIV-XXXV. Bulletins 37, 67, 91. U. S. G. S., 'Mineral Resources of the U. S.'; Bull. 603, p. 208. Bull. Dept. Geo. Univ. of Cal., Vol. 5, pp. 149-153, 331-380. Am. Jour. Sci., Vol. 31, p. 31.

The production of gem materials in California has been somewhat irregular and uncertain since 1911. The compilation of complete statistics is difficult owing to widely-scattered places at which stones are gathered and marketed, for the most part in a small way. The gem material reported mined and shipped during 1944 in California came

from a single property each in Calaveras and Tulare counties, the annual details are concealed under the 'Unapportioned' item so as not to reveal the output of either operator. The material reported in 1944 was all optical and piezoelectric quartz. The 1943 output to a total value of \$329,868 and came from properties in Fresno, Calaveras, Imperial, San Bernardino, and Stanislaus counties and consisted of bloodstone, Iceland spar, optical quartz and topaz. The higher figure for 1943 was due to shipments of optical and piezoelectric grades of quartz.

Varieties of California's Gem Stones

Diamonds have been found in a number of localities in California; but in every case, they have been obtained in stream gravels while working them for gold. The principal districts have been: Volcano in Amador County; Placerville, Smith's Flat and others in El Dorado County; French Corral, Nevada County; Cherokee Flat, Morris Ravine, and Yankee Hill, Butte County; Gopher Hill and upper Spanish Creek, Plumas County. The most productive district of recent years has been Cherokee in Butte County.

California *tourmalines* are decidedly distinctive in coloring and 'fire' as compared to foreign stones of this classification. The colors range from deep ruby to pink, and various shades of green, also blue.

One of our California gem stones, *benitoite*, has not been found elsewhere; and in but a single locality here: The Dallas Mine in San Benito County.

Kunzite, a gem variety of spodumene, was first found in the Pala district in San Diego County. It has thus far been found in only one locality (Madagascar) outside of California. It is of a lilac color, and is described in detail in Bulletin 37 of the State Mining Bureau.

Beryls of excellent fire and delicate colors are also obtained in the Pala district, of which the *aquamarine* (blue) and *morganite* (pink) varieties deserve special mention. Morganite, like kunzite, has thus far been found elsewhere only in Madagascar.

Californite, or 'California jade,' is a gem variety of *idorase* (*vesuvianite*), and is green or white in color. It is found in Butte, Fresno, and Siskiyou counties.

Stones of precious blue *topaz* of fine quality are being cut from crystals mined in northern San Diego County. They are associated with beryl and blue tourmaline.

Some *rhodonite* has been mined in Siskiyou County, and used for decorative purposes, its value being included in the marble figures.

Garnets are found in a number of localities in California; the important yield of gems being *hyacinth* and *spessartite* varieties from San Diego County.

Chrysoprase has been produced in Tulare County.

Turquoise has been found in the desert section of San Bernardino County, but none produced commercially in recent years.

Sapphires have been reported found in San Bernardino and Riverside counties, but not as yet confirmed. A few have been found in stream gravels with diamonds in Butte County.

Rubies have been identified by the laboratory of the State Mining Bureau, occurring in limestone from the Baldy Mountains, San Bernardino County. Thus far no stones of commercial size have been taken out.

Total Production of Gem Materials in California

The value of the gem output in California annually since the beginning of commercial production is as follows:

Year	Value	Year	Value
1900.....	\$20,500	1924.....	\$4,800
1901.....	40,000	1925.....	10,663

GRAPHITE

Bibliography State Mineralogist Reports XVIII, XIV, XV, XVII, XXVI (inc.), XXX, XXXIII, XXXV. Bulletins 67, 91. U. S. G. S., Min. Res. 1914, Pt. II.

Graphite (also called plumbago) has been produced from time to time in the State, coming principally from Sonoma and Los Angeles counties.

Occurrences of graphite have been reported at various times from Calaveras, Fresno, Imperial, Inyo, Los Angeles, Mendocino, San Bernardino, San Diego, Siskiyou, Sonoma and Tuolumne counties. From 1931 to 1933 there was a small production of graphite from a property in Los Angeles County.

During 1943 no production of graphite was reported in California. In 1935 there was a small output of graphite coming from a single property in Los Angeles County. This material was used for experimental purposes. The annual details are concealed under the 'Unapportioned' item in order not to reveal the output of the single operator.

The principal value of graphite is on account of its infusibility and resistance to the action of molten metals. It is also largely used in the manufacture of electrical appliances, of 'lead' pencils, as a lubricant, as stove polish, paints and in many other ways. Amorphous graphite, commonly carrying many impurities, brings a much lower price. For some purposes, such as foundry facings, etc., the low-grade material is satisfactory. Among the interesting uses for graphite is the prevention of formation of scale in boilers. The action is a mechanical one. Being soft and slippery, the graphite prevents the particles of scale from adhering to one another or to the boiler and they are thus easily removed.

Graphite Production of California, by Years

According to the records of the State Mining Bureau, the graphite production of California, by years, has been as follows :

Year	Pounds	Value	Year	Pounds	Value
1901.....	128,000	\$4,480	1923.....		
1902.....	84,000	1,680	1925.....		
1903.....			1926.....	*76,000	\$13,120
1913.....	2,500	25	1927.....		
1914.....			1928.....

* Annual details concealed under 'Unapportioned,' on account of a single producer.

GYPSUM

Bibliography: State Mineralogist Reports XIV, XV, XVII, XVIII, XXII, XXIII, XXV-XXVIII (inc.), XXX, XXXI, XXX-XXXVI (inc.). Bulletins 38, 67, 91. U. S. Geol. Surv., Bull. 223, 413, 430, 697. U. S. Bur. of Standards, Circular No. 281.

Shipments of gypsum in California during 1944 amounted to a total of 558,488 net tons, valued at \$949,833, and came from four properties in Kern County; two each in Imperial and Ventura counties; and one in Riverside County. The 1944 output was an increase in amount and value as compared with 475,967 net tons, worth \$916,883 in 1943.

In addition to the above figures a considerable amount of gypsum came from Alameda County, which was obtained in a chemical process for reducing magnesium salts from salt-works bittern water with lime, the amount of which was not included in the above figures as it was used with lime and magnesite. The 1944 figures showed the largest annual output ever reported in this State. Gypsum mined in this State was used in the manufacture of hard-wall and other plasters, in cement, and for agricultural purposes. The increase in recent years in the uses of this material is chiefly in the agricultural field, the tonnage for which now exceeds that for industrial and structural plasters, and that used in cement.

Uses

The most important use of gypsum from the quantity standpoint is in the calcined form where it is utilized in the manufacture of various hard-wall plasters and plaster board. As plaster of paris, it plays a very important part in surgical work. Approximately 2%, by weight, raw gypsum is added in the manufacture of Portland cement just before the final grinding. In this application, the gypsum acts as a retarder to the set of the cement. The use of gypsum tile for non-bearing fireproof partitions, stairway and elevator enclosures, and the protection of steel columns, girders and beams, has increased greatly.

Keene's cement is a gypsum product, calcined to complete dehydration, and an accelerator added such as alum, potassium sulphate, borax, aluminum sulphate.

Land plaster may be applied to the soil by drilling, or scattered in the hill, or it may be sowed broadcast, in quantities ranging from 200 to 500 pounds to the acre.

Total Production of Gypsum in California

Production of gypsum annually in California since such records have been compiled by this Bureau is as follows:

Year	Tons	Value	Year	Tons	Value
1887.....	2,700	\$27,000	1917.....	30,825	\$56,840
1888.....	2,500	25,000	1918.....	19,695	37,176
1889.....	3,000	30,000	1919.....	19,813	50,579
1890.....	3,000	30,000	1920.....	20,507	92,535

LIMESTONE

Bibliography: State Mineralogist Reports IV, XII-XV (inc.), XVII-XXXI (inc.), XXXIII-XXXV (inc.), XXXVII. Bulletins 38, 91. Oregon Agr. College Extension Bulletin 305. Eng. and Min. Jour.-Press, Vol. 120, pp. 249-253.

'Industrial' limestone was shipped from 18 properties in 10 counties in California during 1944, and totalled 734,425 net tons, valued at \$1,714,414, as compared with 495,262 tons, worth \$1,378,647 in 1943, which came from 19 properties in 11 counties. Distribution of the 1944 output by counties was as follows:

County	Tons	Value
San Bernardino.....	387,458	633,063
Santa Clara ^a	82,925	223,851
El Dorado, Inyo, Riverside, San Mateo ^a , Santa Cruz, Sonoma ^a , Tuolumne, Ventura [*]	264,042	857,500
Totals.....	734,425	\$1,714,414

^a Includes shells dredged from San Francisco Bay.

^{*} Combined to conceal the output of operators in each.

Included in the above figures were 164,494 tons of limestone used in making 82,247 net tons of lime, valued at \$883,009, which came from two properties in San Bernardino County and one each in Alameda, El Dorado, and Tuolumne counties. The figures for lime do not include lime burnt from dolomite and used in the reduction of magnesia from sea water. Dolomite is treated as a separate mineral substance. In 1943 there were 172,664 tons of limestone burnt to make 86,332 net tons of lime, worth \$922,800. Also included were 102,220 tons of limestone, valued at \$556,973, which was used for agricultural purposes and poultry grit, stock feed and as a filler in fertilizers.

The amount here does not include the limestone used in the manufacture of cement nor for macadam and concrete, but accounts for that utilized as smelter and foundry flux, for glass and sugar making, other special chemical and manufacturing processes and burned for lime. It also includes that utilized for fertilizers (agricultural 'lime'), 'roofing gravel,' paint and concrete filler, whiting for paint, putty, kalsomine, terrazzo, paving dust, chicken grit, stock feed, carbon dioxide gas, oilwells, mineral wool, 'paving compound,' facing dust for concrete pipe, also for rubber and magnesite mix.

The above limestone for 1944 was produced by four companies in San Bernardino County; three in Santa Clara County; two each in El Dorado, Santa Cruz and Tuolumne counties; and one each in Inyo, Riverside, San Mateo, Sonoma, and Ventura counties. The material from San Mateo and Sonoma counties and part from Santa Clara County was shells, dredged from San Francisco Bay, which were ground and used for agricultural purposes, chemical purposes, and for poultry grit.

Limestone Production of California, by Years

The following tabulation gives the amounts and values of 'industrial' limestone produced in California by years since 1894 when compilation of such records was begun by the State Mining Bureau. These tonnages consist principally of limestone utilized for flux, glass and sugar making, agricultural, chemical, and other special industrial purposes. That utilized in cement manufacture is not included: Beginning with 1942 the limestone used in the manufacture of burnt lime was included with these figures, instead of being kept separate as a structural material, as most of the lime is being used in metallurgical and chemical industry, and not in construction as in previous years.

Year	Tons	Value	Year	Tons	Value
1894	15,420	\$19,275	1921	75,921	\$305,912
1895	71,355	71,690	1922	84,382	282,181
1896	68,184	71,112	1923	143,266	348,464
1897	36,796	38,556	1924	219,476	582,660

LITHIA

Bibliography: State Mineralogist Reports II, IV, XIV, XXI, XXX, XXXV. Bulletins 38, 67, 91.

During 1944 lithium salts were again produced in California; but coming from a single property, the figures are concealed under the 'Unapportioned' item. The 1944 output showed an increase in amount and value over that reported for 1943.

Starting with 1938, material comes from the brines of Searles Lake in San Bernardino County at the plant of the American Potash and Chemical Corporation, in the form of sodium-lithium phosphate, and is the first output of this form, previous production being the mineral lepidolite.

Lithia mica, lepidolite (a silicate of lithium and others), utilized in the manufacture of artificial mineral water, fireworks, glass, etc., has been mined in San Diego County since 1899, except between 1905 and 1915, though there was none shipped in 1923, 1925, 1929-1943 (inc.). During 1930 there was a small amount of lepidolite mined in California, but not shipped. Some amblygonite, a lithium phosphate, is occasionally also obtained from pockets associated with the gem tourmalines.

Lithia minerals total production in the State has been as follows:

Year	Tons	Value	Year	Tons	Value
1899	124	\$4,600	1923		
1900	440	11,000	1924	109	\$2,269

MICA

Bibliography: State Mineralogist Reports II, IV, XXVI-XXVIII (inc.), XXX, XXXIII-XXXVI (inc.). Bulletins 38, 67, 91. U. S. Geol. Surv., Bull. 740; Min. Res. of U. S. Eng. & Min. Jour.-Press, Vol. 115, pp. 55-60, Jan. 13, 1923.

Sericite, a fine-grained variety of Muscovite, has been produced continuously since 1929 in California with the exception of 1934, 1939, 1942, and 1943. The 1944 shipments came from a single property in Imperial County and was sericite mica schist. In addition there was a small amount of scrap mica mined in San Diego County which was stock-piled and none was shipped from property.

The annual details are concealed in the 'Unapportioned' items so as not to reveal production of the individual operators. The material mined during the year was sericite. Sericite is used as a cheap grade of ground mica for roofing, as a refractory, foundry facing, and decorative material to imitate snow. A small amount of vermiculite, a hydrous mica, expanded by heating and then used as an insulating agent, was mined in 1936.

Classification and Uses

Practically all marketable mica is of the muscovite or phlogopite varieties. There are three main commercial classes: Sheet mica, including punch; splittings, and scrap. Sheet mica is used chiefly for electrical purposes and for glazing; splittings are made into built-up mica; scrap is ground to a powder. Mica to be classified as sheet must yield a rectangle of at least $1\frac{1}{2} \times 2$ in., must split evenly and freely, be free from cracks, rulings, or plications, and reasonably free from inclusions of foreign matter, though stains of a nonconducting character are permissible for some uses. Ability to withstand heat and high electrical resistance have led to a wide application of sheet mica in the electrical industries. The electrical uses of sheet mica greatly exceed all others in quantity and value of the material used.

As a heat-resisting transparent medium, sheet mica has various uses. It is widely employed for stove windows, though this use has

declined to a considerable extent. A hard and rigid mica that is nearly clear is best suited for stove fronts. High-grade stove mica commands a higher price than electrical mica, because for the most part larger sizes are demanded. Mica is also used in furnace and bake-oven sight-holes, heat screens, lamp chimneys, canopies and shades, particularly for gas mantels, and also for military lanterns and in lantern slides.

Its ability to withstand shocks and strains, combined with its transparency, has led to wide use in spectacles, drivers' helmets, smoke helmets, compass cards, gage fronts, and in windows subject to shock, as in the conning towers of warships. On account of its heat-resisting qualities, ground mica is used in railroad car axle packings, foundry facing in pipe and boiler coverings, in fireproof paints, and in rubber tires. Ground mica is used as a component in roofing, as a filler in rubber and other products, in foundry facing, calico printing and as a tire powder. It is used also in tinsel decorations, and as 'Santa Claus snow' for Christmas tree and window decorations. It is used as a lubricant for wooden bearings, and mixed with oil for metal bearings.

The vermiculite variety is any of several hydrous mica minerals which expand upon heating. In recent years they have become valuable as an insulating agent for both heat and sound, when being expanded it often takes on a gold or silver color and is used in window decoration.

Production of mica in California has been as follows:

Year	Tons	Value	Year	Tons	Value

MINERAL PAINT

Bibliography: State Mineralogist Reports XII-XIX (inc.), XXI, XXII-XXVIII (inc.), XXXV, XXXVII. Bulletins 38, 91.

During 1943 in California shipments of mineral paint were made from a single property each in Madera and San Bernardino counties. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of the individual producer. The 1943-1944 total output was 590 short tons valued at \$7,700. The 1943 output came from a single property in Stanislaus County.

These materials have come from Alameda, Amador, Butte, Calaveras, Colusa, Los Angeles, Napa, Nevada, Placer, Riverside, Shasta, Sonoma, Stanislaus and Ventura counties. There are also other deposits that may have possible commercial value, but as yet there have been no commercial shipments from El Dorado, Imperial, Kern, Kings, Lake, Mendocino, San Diego, Siskiyou, Trinity, and Yuba counties, in which they are found.

Mineral Paint Production of California, by Years

The first recorded production of mineral paint materials in the State was in the year 1890. The output, showing annual amount and value since that time, is given herewith:

Year	Tons	Value	Year	Tons	Value
1890.....	40	\$480	1917.....	520	\$2,700
1891.....	22	880	1918.....	728	4,738

MINERAL WATER

Bibliography: State Mineralogist Reports VI, XII-XVIII (inc.), XXI-XXIX (inc.), XXXI, XXXIII (inc.), XXXV-XXXVII (inc.), U. S. G. S. Water Supply Paper 338. Min. Res., 1914, 1916. 'Mineral Springs and Health Resorts of California' by Dr. Winslow Anderson, 1890. U. S. Dept. of Agr., Bur. of Chem., Bulletin 91.

A widespread production of mineral water is shown annually in California. These figures refer to mineral water actually bottled for sale, or for local consumption. Water from some of the springs having a special medicinal value brings a price many times higher than the average shown, while in some cases the water is used merely for drinking purposes and sells for a nominal figure. Health and pleasure resorts are located at many of the springs. The waters of some of the hot springs are not suitable for drinking, but are very efficacious for bathing. From a therapeutic standpoint, California is particularly rich in mineral springs.

The commercial output of mineral water in California during 1944 amounted to 24,445,814 gallons valued at \$812,645, as compared with 22,022,314 gallons worth \$814,700 in 1943. The 1944 output came from springs and well on 30 properties in 15 counties and was distributed as follows:

County	Gallons	Value
Lake.....	7,185	\$2,956
Los Angeles.....	11,536,996	383,317
Butte, Calaveras, Contra Costa, Marin, Napa, Orange, Riverside, San Bernardino, San Diego, San Luis Obispo, Shasta, Siskiyou, Sonoma*.....	12,901,633	426,372
Totals.....	24,445,814	\$812,645

* Combined to conceal the output of producers in each.

The production above tabulated came either from springs or artesian wells and was bottled, in part with artificial carbonation, but mostly natural, and sold for drinking purposes. A large part was used in the preparation of soft drinks with flavors.

Paraiso Hot Springs, Monterey County

Photo by Walter W. Bradley

Mineral Water Production of California, by Years

Mineral water was bottled for sale, at the Napa Soda Springs, Napa County, as early as 1856,¹ and at other springs in California, notably The Geysers, Sonoma County, also at early dates; but there are no figures available earlier than the year 1887. Amount and values, annually, since that year are shown herewith:

¹ Cronise, T. F., The natural wealth of California, p. 182, 1868.

Year	Gallons	Value	Year	Gallons	Value
1887	618,162	\$144,368	1917	1,942,020	\$340,566

PHOSPHATES

Bibliography: State Mineralogist Report XXI. Bulletins 67, 91.

No commercial production of phosphates has been recorded from California, though occasional pockets of the lithium phosphate, amblygonite, Li (AlF) PO_4 , have been found associated with the gem tourmaline deposits in San Diego County. Such production has been classified under lithia. In 1938, recovery began on a commercial scale of sodium-lithium phosphate at the plant of the American Potash and Chemical Corporation, at Searles Lake, San Bernardino County. However, the product is sold for its lithium content rather than the phosphate, hence we record it under Lithia.

PUMICE and VOLCANIC ASH

Bibliography: State Mineralogist Reports XII, XIV, XV, XVII, XVIII, XXII-XXV (inc.), XXX-XXXII (inc.), XXXIV-XXXVIII (inc.). Bulletin 38. U. S. Bureau of Mines, I. G. 6560. (See 'Tufa'.)

The output of pumice and volcanic ash during 1944 in California amounted to a total of 34,525 net tons, valued at \$272,064 f.o.b. rail shipping point, compared with 21,154 tons worth \$142,665 in 1943.

The 1944 output was made up of 10,238 net tons of volcanic ash, worth \$122,900 which came from two properties in Kern County and one each in Madera and San Luis Obispo counties; and 24,287 net tons of pumice, worth \$149,164, which came from three properties in Inyo County, two each in Mono and Siskiyou counties, and one each in Madera, Modoc, and Napa counties. A small amount of the material classed as pumice coming from Siskiyou County was scoria.

The lump pumice was used for light-weight aggregate in concrete, acoustic plaster, abrasives, scouring bricks, insulating, and hen-house litter; while the volcanic ash or tuff was employed in making soap, cleanser compounds, as a filler in concrete, in asphalt, and as a carrier for insecticides in dry agricultural sprays. A portion of the Kern County ash is going into the preparation of one of the nationally advertised brands of cleanser compounds.

Pumice Production of California, by Years

Commercial production of pumice in California was first reported to the State Mining Bureau in 1909, then not again until 1912, since which year there has been a small annual output, as indicated by the following table:

Year	Tons	Value	Year	Tons	Value
1909.....	50	\$500	1928.....	10,440	\$105,055
1910.....			1929.....	10,449	76,123

PYRITES

Bibliography: State Mineralogist Reports XVIII, XIX, XXII, XXV, XXVI, XXX, XXXV. Bulletins 38, 91. Min. and Sci. Press, Vol. 144, pp. 825, 840.

Pyrite, shipped in California during 1944, came from a single property in Shasta County and showed an increase in amount and value over that of 1943. The annual details are placed under 'Unapportioned' to conceal the output of the individual operator.

This material was mostly used in the manufacture of sulphuric acid for explosives and fertilizer. Some iron sulphate had been produced previously and was utilized directly in the preparation of an agricultural fertilizer and insecticide. The sulphur content ranged up to 50.8% S.

This does not include the large quantities of pyrite, chalcopyrite, and other sulphides which are otherwise treated for their valuable metal contents. Some sulphuric acid is annually made as a by-product in the course of roasting certain tonnages of Mother Lode auriferous concentrates while under treatment for their precious metal values.

Pyrites Production in California, by Years

The total recorded pyrites production in California to date is as follows:

Year	Tons	Value	Year	Tons	Value
1898	6,000	\$30,000	1923	148,004	\$555,308
1899	5,400	28,620	1924	124,214	517,835
1900	3,642	21,133	1925	129,500	528,550
1901	4,578	18,429	1926	100,896	466,088
1902	17,525	60,306	1927	130,910	564,823

SHALE OIL

Bibliography: State Mineralogist Report XIX. U. S. Geol. Surv., Bulletins 322, 729. U. S. Bur. of Mines, Bull. 210, Eng. and Min. Jour.-Press, Vol. 118, No. 8, pp. 290-292, Aug. 23, 1924. Chem. & Met. Eng., Vol. 32, No. 6, Feb. 1925. Min. Congress Jour., Dec. 1924.

Two plants on a more or less experimental scale operated for six years in California, with commercial production beginning in a small way in 1922. The product, in part, was sold for utilization as a flotation oil in metallurgical work, and part consumed as fuel at the plants. There has been no production reported since 1927.

SILICA (Sand and Quartz)

Bibliography: State Mineralogist Reports IX, XIV, XV, XVII, XVIII, XX-XXVIII (inc.), XXXI-XXXII (inc.), XXXV-XXXVIII (inc.). Bulletins 38, 67, 91.

The output of silica (quartz and glass sand) in California during 1944 amounted to 274,291 net tons, valued at \$830,311 f.o.b. rail shipping point, and came from three properties in San Bernardino County;

and one each in Contra Costa, Mariposa, Monterey, and Riverside counties. The above figures were the largest annual output of silica ever reported in this State. The 1943 shipments totaled 161,318 tons, worth \$533,434.

Of the 1944 production, 41,796 tons, worth \$146,582, was quartz, and/or ganister and came from properties in Mariposa, and San Bernardino counties; the remaining 232,495 tons, worth \$683,729, was glass and silica sand and came from Contra Costa, Monterey, Riverside, and San Bernardino counties.

These materials were combined because of an overlapping in their uses and specifications as to the silicon dioxide (SiO_2) content. Vein quartz, ganister, and silica sand are used as refractories, in fire brick, in ceramic mixes and glazes, and as abrasives. It is possible to use quartz as well as glass sand in the manufacture of glass; also some of the quartz was used in the manufacture of ferrosilicon.

Not included under this heading are such forms of silica as sandstone, flint, tripoli, diatomaceous earth, and the gem forms of 'rock crystal,' amethyst, and opal. Each of these has various industrial uses, which are treated under their own designations.

We combine these materials because of the overlapping roles of vein quartz which is mined for use in glass-making and as an abrasive, and that of silica sand which, although mainly utilized in glass manufacture, also serves as an abrasive. Both varieties are also utilized to some extent in fire-brick manufacture.

We do not include under this heading such forms of silica as quartzite, sandstone, flint, tripoli, diatomaceous earth, nor the gem forms of 'rock crystal,' amethyst, and opal. Each of these has various industrial uses, which are treated under their own designations.

There are various deposits of quartz in California which could be utilized for glass making, but to date they have not been so used owing to the cost of grinding and the difficulty of preventing contamination by iron while grinding.

Silica sand has been produced in the following counties of the State: Alameda, Amador, Contra Costa, El Dorado, Imperial, Inyo, Los Angeles, Mariposa, Mono, Monterey, Orange, Placer, Riverside, San Diego, San Joaquin and Tulare, the chief centers being Contra Costa, Amador, Monterey and Los Angeles counties. The industry is of limited importance, so far, because of the fact that much of the available material is not of a grade which will produce first-class colorless glass; for such, it must be essentially iron-free. Even a fractional percent of iron imparts a green color to the glass.

Total Silica Production in California

Total silica production in California since the inception of the industry, in 1899, is shown below, being mainly sand:

Year	Tons	Value	Year	Tons	Value
1899	3,000	\$3,500	1923	7,964	\$30,420
1900	2,200	2,200	1924	6,808	35,006
1901	5,000	16,250	1925	12,498	96,780

SILLIMANITE-ANDALUSITE-KYANITE GROUP

Bibliography: State Mineralogist Reports XX, XXIII, XXIV, XXVII, XXXV-XXXVIII (inc.). Bulletins 67, 91. Dana's Mineralogy. U. S. Geol. Surv., Prof. Paper 110. U. S. Bureau of Mines, Inform. Cire. 6255. Eng. & Min. Jour.-Press. Vol. 120, pp. 91-94, 1925. Amer. Mineralogist, June, 1924.

During 1944 in California shipments of andalusite from Mono County and kyanite from Imperial County were made, the annual details being concealed under 'Unapportioned' item so as not to reveal the output of either operator. The 1944 output was a decrease in both amount and value as compared with that of 1943.

Sillimanite and andalusite are both aluminum silicates (Al_2SiO_5), having the same composition and formula, but with slightly different physical characteristics. Though both crystallize in the orthorhombic system, their crystal habits are different. A massive deposit of andalusite, found in Dry Creek Canyon in the White Mountains of the Inyo Range, in Mono County, is being mined by the Champion Spark Plug Company of Detroit, Michigan. The material is shipped East and utilized in the manufacture of porcelain for automobile spark plugs, for other high-tension electric insulators, laboratory ware and porcelain. Porcelain made from these minerals can be subjected to sudden and extreme changes in temperature without damage.

Kyanite is also an aluminum silicate (Al_2SiO_5), of the same chemical composition as andalusite and sillimanite, but crystallizing in the triclinic system. A deposit of Kyanite is being mined in Imperial County, near Ogilby, by the Vitrefrax Corporation and shipments made to their refractory plant in Los Angeles.

Dumortierite, though differing somewhat in composition from the above, being a basic aluminum silicate ($\text{HAl}_3\text{BSi}_3\text{O}_{20}$), has proved similar in behavior in ceramic work so that it is now being mixed with andalusite for electrical porcelains. A deposit of this mineral in Nevada is being mined for that purpose. Occurrences of massive dumortierite are known in Imperial and San Diego counties in this State and there may yet be some commercial possibilities for them.

SOAPSTONE and TALC

Bibliography: State Mineralogist Reports XII, XIV, XV, XVII-XXVII (inc.), XXX, XXXIII-XXXVII (inc.). Bulletins 38, 67, 91. U. S. Bur. of Mines, Bulletin 213. Rep. of Investigations, Serial No. 2253, May, 1921.

The total production of talc, pyrophyllite, and soapstone in California during 1944 amounted to 64,041 net tons, valued at \$824,052; compared with 63,012 tons, worth \$723,056, in 1943. The 1944 output was the largest annual production ever reported in this State and was 63,796 net tons of high grade talc and pyrophyllite. The talc came from five properties each in Inyo and San Bernardino counties and the pyrophyllite from a single property in Mono County. The production of 272 tons of soapstone came from a single property each in Amador and Tuolumne counties.

The talc and pyrophyllite mined during the year were used in toilet powder, cosmetics, paint, paper, rubber manufacture, as a carrier for insecticides, in delousing powder, in cotton finishing, in ceramics, steatite products, etc. The 'soapstone' grades were used in metal workers crayons as a carrier for insecticides.

Composition and Varieties

Talc is hydrous magnesium silicate with the chemical formula $H_2Mg_3(SiO_3)_4$. It is also called soapstone and steatite. The term 'talc' properly includes all forms of the pure mineral, whereas 'steatite' denotes particularly the massive, compact variety, and 'soapstone' the impure, massive forms containing as low as 50% of talc. When pure, talc is soft, having a hardness of 1, but impurities increase the hardness up to 3 or 4. The color varies from pure white and silvery white through gray, green, apple green, to dark green, also yellow, brown, and reddish when impure. It is commonly compact or massive, or in fine granular aggregates, and often in foliated plates or in fibrous aggregates.

Pyrophyllite a hydrous aluminium silicate with the chemical formula $H_2Al_2Si_4O_{12}$. Its physical properties are similar to talc and it is often impossible to tell the two minerals apart. Pyrophyllite is slightly harder than talc.

Uses

Although the uses of talc and soapstone are many and varied, some of them are not in general well known nor fully developed; and

although few of their uses can justly be considered essential in the sense that no substitute can be used, there are several which are of great importance. The widest use of talc is in the powdered form, and the value depends upon color (whiteness), uniformity, fineness of grain, freedom from grit, 'slip,' and sometimes freedom from lime. The white varieties, free from grit and iron, low in lime, ground to 200-mesh and finer, are largely used as a filler for paper, rubber and paint, and the very highest grade as toilet powder. Ground talc is also used in dressing and coating cloth, in making soap, rope, twine, pipe-covering compounds, heavy lubricants, and polishes, and as a filler in concrete to make it waterproof. Ground talc and soapstone are used in ceramic body for tile and china; for foundry facings, either alone or mixed with graphite and a coarser grade is used in the manufacture of asphalt-coated roofing felts and papers, both as a filler and as a surfacing. Massive close-grained talc, free from iron and grit, is cut into blanks and baked, forming the material used for gas tips and electrical insulation, commonly known as 'lava.' Its hardness, its resistance to heat, acid and alkalies, and its great dielectric strength make it very useful for electric insulation, and no satisfactory substitute for it has been found.

Massive varieties of talc, pyrophyllite, and high grades of soapstone are cut into slate pencils and steel-workers' crayons. 'French chalk' or 'tailor's chalk' is a soft, massive talc. In China, Japan and India, massive talc (steatite) is carved into images and other forms, and is often sold as imitation jade. Soapstone is cut into slabs of 1 and 2 inches in thickness and sold as griddles, footwarmers, and fireless-cooker stones, or fabricated into laundry sinks and tubs, laboratory table tops, hoods, tanks and sinks, electric switchboards, and for other uses in which the properties of resistance to heat, acids and alkalies, and electricity are essential.

Talc Production of California, by Years

Production was intermittent in the State up to 1912; but there has been a material growth since 1916, as shown in the following table:

Year	Tons	Value	Year	Tons	Value
1893	400	\$17,750	1920	11,327	\$221,362
1894			1921	8,752	130,078

STRONTIUM

Bibliography: State Mineralogist Report XXVI, XXVII, XXXV-XXXVI, XXXVIII. Bulletins 67, 91. U. S. G. S. Bull. 540; 660-I.

During 1944 strontium minerals were mined and shipped from one property each in Imperial and San Bernardino counties. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of the individual. The 1943-1944 output totaled 2,500 short tons valued at \$42,406. This material was reported to be used for pyrotechnics (red flares), in the refining of sugar, and in a new alloy of steel. The 1944 output showed a decrease in amount and value from that of 1943.

The first recorded commercial output of strontium minerals in California was in 1916. Shipments reported as averaging 80% SrCO_3 have been made, and both celestite (SrSO_4) the strontium sulphate and strontianite (SrCO_3) the strontium carbonate have been produced commercially in this State. The deposit is associated with deposits of barite near Barstow, San Bernardino County. The carbonate has also been found in massive form near Shoshone, Inyo County. In addition to Imperial County, celestite is found near Calico and Ludlow, and in the Avawatz Mountains in San Bernardino County, but as yet undeveloped.

The principal use for strontium in the United States is in the form of the nitrate in the manufacture of red flares, or Costen and Bengal lights and fireworks.

Production of strontium minerals in California, by years, has been as follows:

Year	Tons	Value	Year	Tons	Value
1916-----	57	\$2,850	1940-----	627	\$8,686
1917-----	3,050	37,000	1941-----		
1918-----	2,900	33,000	1942/*-----	5,671	83,069
1919-----			1943/*-----	2,500	42,406
1939-----	2	82	1944-----		
			Totals-----	14,807	\$207,093

* Annual details concealed under 'Unapportioned.'

SULPHUR

Bibliography: State Mineralogist Reports IV, XIII, XIV, XXV, XXXIV, XXXV, XXXVIII. Bulletins 38, 67, 91.

During 1944 there were no shipments of sulphur in California. In 1942 there was one shipper of sulphur from a single property in Inyo County. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of an individual. This mineral has been found to some extent in Alpine, Colusa, Imperial, Inyo, Kern, Lake, Sonoma, Tehama, and Ventura counties.

Total Production of Sulphur in California

Sulphur was produced at the famous Sulphur Bank mine in Lake County, during the years 1865-1868 (inc.) ; following which the property

became more valuable for its quicksilver. The Elgin quicksilver mine, near Wilbur Springs, Colusa County, is a similar occurrence.

Production of sulphur in California to date :

Year	Tons	Value	Year	Tons	Value

ZIRCON

Bibliography: State Mineralogist Report XXXIV.

During 1944 there was no production of zircon reported in California but in 1941 there was a small shipment of zircon sand from near Lincoln, Placer County, to the East Coast to be used in a steel alloy. In 1937 for the first time, zircon was reported in commercial quantities, in this State, from the Kaufeld dragline dredge near Lincoln. They recovered considerable zircon from their black sand, but only shipped a small amount for experimental purposes in the manufacture of refractories and as an abrasive in blast sand.

The chief source of zirconium is the mineral zircon, a zirconium silicate, ZrSiO_4 . Zircon is used, as a gem, being next to the diamond in brilliancy; as a refractory, molds for steel, insulation in electric heating devices, as a coating on other refractories, coating of welding rods, and in the manufacture of other zirconium compounds.

The metal zirconium is used in radio tubes as an alloy in steel, with copper, etc.

CHAPTER SIX

SALINES

Bibliography: State Mineralogist Reports III, XIV, XV, XVII-XXIX (inc.), XXXIII-XXXVIII (inc.). Bulletin 24. Spurr and Wormser, "Marketing of Minerals." "Non-Metallic Minerals," by R. B. Ladoo. "Industrial Minerals and Rocks," A. I. M. E., 1937. See also under each substance.

Under this heading are included borax, common salt, soda, potash, and other alkaline salts. The first two have been produced in a number of localities in California, more or less regularly since the early sixties. Except for a single year's absence, soda has had a continuous production since 1894. Potash, magnesium chloride and sulphate, and calcium chloride have been added to the commercial list in recent years, joined in 1926 by bromine, and in 1931 by iodine and in 1938 by the alum minerals.

Our main resources of salines are the lake beds of the desert regions of Imperial, Inyo, Kern, Los Angeles, San Bernardino, and San Luis Obispo counties, and the waters of the Pacific Ocean.

The saline group showed an increase in total value from \$15,660,400 in 1943 to \$20,983,104 in 1944, with all substances included under this heading showing an increased output with the exception of calcium chloride and iodine. A portion of the material included under the heading of magnesia and other magnesium compounds was produced prior to 1944.

The following table gives details for each year:

Substance	1943		1944		Increase + Decrease— Value
	Amount	Value	Amount	Value	
Borates.....	216,687 tons	\$4,953,174	234,860 tons	\$5,264,864	\$311,690+
Magnesia and other magnesium compounds.....	9,026 tons	728,065	113,927 tons	4,537,381	3,809,316+
Salt.....	631,776 tons	1,695,231	769,873 tons	2,060,960	365,729+
Soda (soda ash and salt cake).....	260,590 tons	3,166,576	299,574 tons	3,647,630	481,054+
Unapportioned*.....	-----	5,117,354	-----	5,472,269	354,915+
Total values.....	-----	\$15,660,400	-----	\$20,983,104	
Net increase.....	-----	-----	-----	-----	\$5,322,704

* Includes bromine, calcium chloride, iodine, and potash.

ALUM MINERALS

Bibliography: State Mineralogist Reports XXXV, XXXVII.

There are several minerals found in California that are considered natural alums. They are hydrous aluminum sulphates combined with sulphates of iron, potassium, sodium or magnesium. The most important are: Alunite, $K_2Al_6(OH)_{12}(SO_4)_4$, a basic hydrous aluminum and potassium sulphate, and Alunogen, $Al_2(SO_4)_3 \cdot 16H_2O$, an hydrous aluminum sulphate.

In 1938 a small production and some development work was done on an alunogen deposit near Corona, Riverside County. This output

was the first recorded commercial production reported in California. The annual details are combined under 'Unapportioned' item to conceal the output of the single operator. An alunite deposit near Glen Ellen, Sonoma County, was opened up several years ago and some development work has been done in hopes of commercializing this mineral.

BORATES

Bibliography: State Mineralogist Reports III, X, XII-XV (inc.), XVII-XXIII (inc.), XXV-XXVII (inc.), XXXIII-XXXIV, XXXVI, XXXVII. Bulletins 24, 67, 91.

During the year, there was produced in California a total of 276,398 net tons of borate material, as compared with 249,523 tons for the preceding year. The material shipped during the year included the sodium borates, kernite (rasorite), kramerite from Kern County; also crystallized borax prepared by evaporation of brines at Searles Lake in San Bernardino County and Owens Lake in Inyo County, and a small amount of colemanite from Death Valley, Inyo County.

As the crude ore is not sold as such but is almost entirely refined into borax of commerce before shipping, and because of the fact that the material varied widely in boric acid content, we have recalculated the tonnage to a basis of 40 per cent A.B.A. This is approximately the average A.B.A. content of colemanite material after calcining, and also of the crystallized borax obtained from evaporation of the lake brines.

Recalculated, the 1944 output totaled 234,860 net tons, valued at \$5,264,864, as compared with 216,687 tons worth \$4,953,174 for the year 1943. The above came from two properties each in Inyo and San Bernardino counties, and one in Kern County.

Total Production of Borate Materials in California

Borax was first discovered in California in the waters of Tuscan Springs in Tehama County, January 8, 1856. Borax Lake in Lake County was discovered in September of the same year by Dr. John A. Veach. This deposit was worked in 1864-1868, inclusive, and during that time produced 1,181,365 pounds of refined borax. The bulk of it was exported by sea to New York. This was the first commercial output of this salt in the United States, and California is still today the leading American producer of borax, having been for many years the sole producer. California is also the premier world source, today.

Production from the dry lake 'playa' deposits of Inyo and San Bernardino counties began in 1873; but it was not until 1887 that the borax industry was revolutionized by the discovery of the colemanite beds at Calico, in San Bernardino County and later similar beds in Inyo and Los Angeles counties. The colemanite deposits of Ventura County were not worked extensively, owing to lack of transportation facilities. Some production of colemanite has been made from deposits opened up in Clarke County, Nevada. Colemanite was in turn, displaced by the discovery in 1926 of kernite (rasorite) a sodium borate and probertite (kramerite) a hydrous sodium, and calcium borate, near Kramer in Kern County. The brines of Searles Lake are likewise an important source.

The total production of borate materials in California is shown in the following table:

Total Production of Borate Materials in California

Year	Tons	Value	Year	Tons	Value
1864	12	\$9,478	1905	46,334	\$1,019,158

¹ Refined borax.

² Recalculated to 40% 'anhydrous boric acid' equivalent beginning with 1922.

BROMINE

Bibliography: State Mineralogist Report XXXVII.

The first commercial production of bromine and bromine compounds was begun during 1926 by the California Chemical Corporation in its plant at Chula Vista, San Diego County, from salt-works bittern waters. This same plant has been recovering magnesium chloride for a number of years. Bromine is also now being made at a similar bittern-water plant at Newark, Alameda County, and beginning in 1940 from brines at Searles Lake, San Bernardino County. The 1944 output is an increase in amount and value as compared with that of 1943. The 1944 yield was the largest annual production on record in California; annual details of which are concealed under the 'Unapportioned' item so as not to reveal the production of the single company which operated two of the two plants.

The total commercial production of bromine in California is as follows:

Year	Tons	Value	Year	Tons	Value
1926			1937		
1927} *-----	158	\$120,480	1938} *-----	914	\$327,823

CALCIUM CHLORIDE

Bibliography: State Mineralogist Report XXXVII U. S. Geol. Surv. Min. Res. 1919, Pt. II. Engineering and Contracting, Roads and Streets, monthly issue, Feb. 6, 1924. 'How to Maintain Roads,' manual of instruction of Dow Chemical Company.

Calcium chloride is hygroscopic, that is, it has an affinity for water. This property is taken advantage of by utilizing this salt as a drying agent.

During 1944 the production of calcium chloride in California came from one property each in Imperial and San Bernardino counties. The annual details are combined under the 'Unapportioned' item to conceal the output of the operators. The 1944 output showed a decrease in both amount and value as compared with that of 1943.

Total Calcium Chloride Production in California

Commercial production of calcium chloride in California was first reported to the State Mining Bureau in 1921, from two plants in San Bernardino County, being obtained as a by-product in the refining of salt from deposits in certain of the desert dry lakes. Total production in California is shown in the following tabulation:

Year	Tons	Value	Year	Tons	Value
1921	683	\$22,980	1934		
1922}-----			1935} *-----	4,048	\$16,196

IODINE

Bibliography: State Mineralogist Reports XXXIV, XXXVI-XXXVII. U. S. Bureau of Mines I. C. 6387.

In 1944 the output of iodine in California came from two plants in Los Angeles County and showed a decrease in value as compared

with that of 1943. The annual details for 1944 are combined under the 'Unapportioned' item to conceal the output of either operator. The 1943 production was the largest in amount and value so far reported in this State. The combined 1943-1944 output totaled 1,194,388 pounds valued at \$1,532,70.

Total Iodine Production in California

Iodine was first produced in California during 1917 to 1921 as a by-product of potash which was reduced from kelp in an experimental station of U. S. Department of Agriculture at Summerland, but after the armistice the demand for these minerals decreased so that the plant in Santa Barbara County closed. In 1929 the General Salt Company erected a plant which reduces iodine from the waste waters of certain deep oil wells in the Long Beach field. During 1933 two more plants started operation, making a total of three producing plants in the State.

MAGNESIA and other MAGNESIUM COMPOUNDS

Bibliography: State Mineralogist Reports XX, XXI, XXV-XXVI (inc.), XXXIV, XXXVII. Bulletin 91. 'Dictionary of Applied Chemistry,' by Thorpe. U. S. Geol. Surv., Min. Res. of P. S.

Magnesia and magnesium compounds produced in California during 1944 came from two properties in San Mateo County and one each in Alameda, Monterey, and San Diego counties. The 1944 total was 113,927 net tons worth \$4,537,381, but included some material produced prior to 1944 but not previously reported. The material from Alameda County was basic magnesium carbonate and magnesium hydroxide; that from Monterey County was magnesia and periclase; that from San Diego County was magnesium chloride; and that from San Mateo County was basic magnesium carbonate, magnesium carbonate, magnesium hydroxide, and magnesium oxide. Also coming from Alameda County was a tonnage of magnesium hydroxide but not included in the above totals as this material was used as magnesite and therefore is included herein under that substance. The 1944 output was the largest annual production in both amount and value thus far reported in this State. The chloride was nearly all sold for use in magnesite stucco and cement mixtures (Sorel cement) also some for road liquor. The carbonate, or bulky white powder, was used as a heat-insulating material, as a substi-

tute for magnesite, as a filler for rubber, paper, paint, etc., and in medicines, in tooth paste, in face powder and as a polish for metal and glass. The sulphate market as in past years was utilized for medicinal and bath purposes. The material coming from San Diego County was residual bitterns from the salt plants and was in part marketed in the liquid form carrying from 35% to 67% $MgCl_2$ and in part as dry crystals, while that from Alameda and San Mateo counties was magnesium carbonate, magnesium hydroxide, and magnesium oxide, obtained by precipitation from sea water.

Total Production of Magnesium Salts in California

Commercial production of magnesium chloride in California was begun in 1916 by some of the salt companies, from the residual bitterns obtained during the evaporation of sea water for its sodium chloride. In addition, some magnesium sulphate, or 'epsom salts' has also been made, but in smaller amount, and magnesium carbonate by a patented process, direct from sea water.

The total production of magnesium salts in California, since the beginning of the industry here, is shown in the following tabulation:

Year	Tons	Value	Year	Tons	Value
1916.....	851	\$6,407	1933.....	2,073	\$159,660

POTASH

Bibliography: State Mineralogist Reports XV, XVIII, XX, XXII, XXV-XXXVII (inc.), XXXIV, XXXVII. Bulletins 24, 67, 91. U. S. G. S., Min. Res. 1913, 1914, 1915. Senate Doc. No. 190, 62 Congress, 2d Session. Mining & Sci. Press, Vol. 112, p. 155; Vol. 114, p. 789. Eng. & Min. Jour.-Press, Vol. 117, p. 557, Apr. 5, 1924.

The 1944 production of potash in California came from a single operator in San Bernardino County, the details of which are concealed under the 'Unapportioned' item. This was principally chloride and some sulphate, with the product averaging 60% equivalent K_2O content. The material was sold mainly for fertilizer manufacture. The 1944 output showed an increase in amount and value over that of 1943.

Total Production of Potash in California

Potash production began commercially in California in 1914, with a small yield from kelp. Practically all of the output now comes from deposits of potash-bearing residues and brines in the old lake beds of the desert regions, particularly Searles Lake, San Bernardino County. A small amount has been made from salt-works bitterns, and for a time there was some from Portland cement dust. Some also has been obtained from molasses distillery-slops char.

The annual amounts and values of these potash materials, since their beginning in California in 1914, have been as follows:

Year	Tons	Value	Year	Tons	Value
1914.....	10	\$460	1932.....		
1915.....	1,076	19,391	1933/*.....	153,147	\$3,932,721

SALT

Bibliography: State Mineralogist Reports II, XII-XV (inc.), XVII-XXIII (inc.). XXV-XXVII (inc.), XXXIV-XXXVIII (inc.). Bulletins 24, 67, 91. U. S. Geol. Survey, Bull. 669. U. S. Bur. of Mines, Bull. 146.

Most of the salt production in California is obtained by evaporation of water of the Pacific Ocean, plants being located on the shores of San Francisco, Monterey, and San Diego bays, and at Long Beach. Additional amounts are derived from lakes and lake beds in the desert regions (in part, rock salt), mainly in Imperial, Kern, and San Bernardino counties, and evaporation of alkaline lake water in Modoc County. A small amount of valuable medicinal salts has been obtained by evaporation of the water of Lake Mono, Mono County, and from a mineral spring in Butte County.

The 1944 salt production in California totaled 769,873 net tons, valued at \$2,060,960, and came from three properties in Alameda County; two in San Bernardino County; and one each in Imperial, Kern, Los Angeles, Monterey, Orange, and San Diego counties. The 1944 salt output was the largest annual yield ever reported in this State. The figures for 1943 were 631,776 tons worth \$1,695,231. The average value reported by salt producers in California in 1944 was \$2.68 per net ton, f.o.b. plant compared with \$2.68 in 1943; \$2.90 in 1942; \$2.72 in 1941; \$2.79 in 1940; \$2.75 in 1939; \$2.78 in 1938; and \$2.82 in 1937.

Production of Salt in California, by Years

Although salt has been made in California since the early '60's, there are no definite or authenticated records for the earlier years before the beginning of the statistical tabulations by the State Mining Bureau.

Amount and value of annual production of salt in California from 1887 is shown in the following tabulation :

Year	Tons	Value	Year	Tons	Value
1887.....	28,000	\$112,000	1917.....	227,825	\$584,373
1888.....	30,800	92,400	1918.....	212,076	806,328

SODA

Bibliography: State Mineralogist Reports XII, XIII, XV, XVII, XVIII, XX, XXII, XXIII, XXV-XXIX (inc.), XXXIV, XXXVI-XXXVIII. Bulletins 24, 67, 91. U. S. Geol. Surv., Bull. 717.

The production of sodium salts in California in 1943 included soda ash, and trona, from plants at Owens Lake, Inyo County; and soda ash, salt cake, and trona (sequi-carbonate, a double salt of Na_2CO_3 and NaHCO_3) from Searles Lake, San Bernardino County. The plant on Dale Lake near Amboy and Searles Lake, San Bernardino County, started operations during the year 1940 and made shipments of salt cake in 1941. There were no shipments of salt cake (sulphate) from Carrizo Plains, San Luis Obispo County. Shipments made during the year 1944 totaled 299,574 net tons valued at \$3,647,630 as compared with 260,590 tons worth \$3,166,576 in 1943. The 1944 output had the largest amount and value of any annual production ever reported in this State. In 1944 179,621 tons of soda ash and 119,953 tons of salt cake were reported shipped in California.

The soda ash was used mainly in the manufacture of soap, glass, paper, oil refining, sugar refining, and chemicals; and the trona for metallurgical purposes. The salt cake or sodium sulphate was used in the manufacture of paper, glass, and in chemicals.

Soda Production of California, by Years

The total output, showing amount and value of these materials in California since the inception of the statistical records of the State Mining Bureau, is given in the table which follows:

Year	Tons	Value	Year	Tons	Value
1894.....	1,530	\$20,000	1920.....	32,407	\$1,164,898
1895.....	1,900	47,500	1921.....	14,828	438,996
1896.....	3,000	65,000	1922.....	20,084	573,661

CHAPTER SEVEN

BY COUNTIES

Introductory

The State of California includes a total area of 158,297 square miles, of which 156,803 square miles are of land (according to 1940 census resurvey). The maximum width is 235 miles, the minimum 148 miles, and the length from the northwest corner to the southeast corner is 775 miles. The State is divided into fifty-eight counties. The 1940 census figures show a total population for California of 6,907,387. Minerals of commercial value exist in every county, and during 1944 some active production was reported to the State Division of Mines from all of the fifty-eight.

Rank of Counties in Mineral Yield, 1944

Of the ten leading counties in point of total value of mineral output during 1944, the first six, Kern, Los Angeles, Fresno, Orange, Ventura, and Santa Barbara, and Kings eighth, owe their position to petroleum and natural gas; and Sacramento, tenth, to natural gas and miscellaneous stone. Kern County which led all others in 1944 and is credited with 23 per cent of the state's value, passed Los Angeles County for the first time since 1923. Both counties owe their position to crude oil. San Bernardino County, seventh, owes its position to cement, borates, iron ore, potash, and soda; and Alameda County, ninth, to miscellaneous stone and salt.

There were twenty-six counties having a mineral production valued in excess of a million dollars in 1944. The value of natural gas exceeded the million dollar mark in eight counties; cement and petroleum in seven counties each; miscellaneous stone in five counties; borates in two counties; and brick, copper, diatomite, iron ore, magnesia, potash, quick-silver, salt, soda, and tungsten ore in one county each.

In point of variety and diversity San Bernardino County led all others in 1944 with thirty-one different mineral substances on its commercial list; followed in turn by Kern County with twenty; Inyo County, eighteen; Los Angeles, Riverside, and Shasta counties each with thirteen; Calaveras, Fresno, and Orange counties each with twelve; Amador and San Diego counties each with eleven; and Butte, Nevada, and Santa Clara counties each with ten.

Mineral output by counties in order of value for 1944:

County	Value	County	Value
1. Kern -----	\$108,257,342	31. San Luis Obispo -----	\$704,818
2. Los Angeles -----	108,138,154	32. Nevada -----	619,179
3. Fresno -----	49,800,782	33. Tulare -----	615,630
4. Orange -----	33,312,154	34. Imperial -----	564,263
5. Ventura -----	30,545,897	35. Stanislaus -----	545,376
6. Santa Barbara -----	23,908,079	36. Trinity -----	516,066
7. San Bernardino -----	23,358,596	37. Del Norte -----	509,703
8. Kings -----	13,984,044	38. Lake -----	468,389
9. Alameda -----	8,089,026	39. Tuolumne -----	465,734
10. Sacramento -----	7,832,687	40. Yolo -----	394,299
11. Inyo -----	6,716,413	41. Humboldt -----	373,525
12. Solano -----	5,973,575	42. Marin -----	312,849
13. Santa Clara -----	5,228,668	43. El Dorado -----	298,859
14. Riverside -----	5,203,973	44. Amador -----	283,206
15. Monterey -----	4,942,121	45. Modoc -----	255,229
16. Contra Costa -----	3,244,179	46. Placer -----	250,237
17. Calaveras -----	2,642,638	47. Mendocino -----	152,039
18. Shasta -----	2,615,373	48. Mono -----	123,173
19. Siskiyou -----	2,507,921	49. San Francisco -----	120,000
20. San Mateo -----	2,452,525	50. Sierra -----	114,195
21. San Benito -----	1,985,039	51. Tehama -----	101,823
22. San Diego -----	1,985,032	52. Sutter -----	89,246
23. Santa Cruz -----	1,762,807	53. Plumas -----	78,714
24. San Joaquin -----	1,369,198	54. Madera -----	74,141
25. Mariposa -----	1,306,411	55. Glenn -----	33,736
26. Yuba -----	1,106,311	56. Lassen -----	26,495
27. Butte -----	929,239	57. Colusa -----	14,491
28. Sonoma -----	905,121	58. Alpine -----	2,214
29. Merced -----	853,905		
30. Napa -----	709,686	Total value -----	\$469,774,525

ALAMEDA

Land area: 732 square miles.

Population: 513,011 (1940 census).

Location: East side of San Francisco Bay.

County seat: Oakland.

References: State Mineralogist Report XVII:XVIII:XX:XXVI
(Oct., 1929) : XXXV.

Alameda, while in no sense one of the "mining counties," came ninth on the list of counties as to value, with a mineral production for 1944 worth \$8,089,026 and had nine different substances. This was an increase over the 1943 output which was valued at \$5,336,917.

Commercial production for 1944 was as follows:

Substance	Value
Stone, miscellaneous -----	\$6,112,065
Unapportioned* -----	1,976,961
Total value -----	\$8,089,026

* Includes brick and hollow tile, bromine, clay (pottery), copper, gypsum (reduced from sea water and lime), lime (burnt from shells dredged in Santa Clara County), magnesium salts, manganese ore, salt.

ALPINE

Land area: 776 square miles.

Population: 323 (1940 census).

Location: On eastern border of State, south of Lake Tahoe.

County seat: Markleeville.

References: State Mineralogist Report XV:XVII:XVIII:XXVII
(Oct., 1931) :XXV:XXXVII.

Alpine County ranked fifty-eighth in value of output for 1944 which was \$2,214, compared with \$20,241 in 1943. The 1944 production was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	15 fine ozs.	\$525
Silver -----	671 fine ozs.	477
Unapportioned* -----	-----	1,212
Total value -----	-----	\$2,214

* Includes copper and stone, miscellaneous.

AMADOR

Land area: 601 square miles.

Population: 8,973 (1940 census).

Location: East-central part of State—Mother Lode District.

County seat: Jackson.

References: State Mineralogist Report XV:XVII:XVIII:XIX:XX:XXII (April, 1927):XXX:XXXV:XXXVII.

Amador County ranked forty-fourth as to value of mineral output for 1944 with eleven different substances worth \$283,206, compared with \$534,098 in 1943.

Amador at one time led the State in gold production, though exceeded in 1920-1923 and in 1926-1927 by Yuba and Nevada counties; but in 1925 and 1928 by Yuba only, in 1929-1932 by Nevada only, and in 1931-1936 and 1939-1941 by Nevada and Sacramento, and only ranked fifteenth in 1944.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	440,962 lbs.	\$59,530
Gold -----	734 fine ozs.	25,690
Lead -----	1,560 lbs.	125
Silver -----	2,173 fine ozs.	1,524
Stone, miscellaneous -----	-----	8,492
Unapportioned* -----	-----	187,845
Total value -----	-----	\$283,206

* Includes brick, clay (pottery), coal, manganese ore, soapstone.

BUTTE

Land area: 1,722 square miles.

Population: 42,840 (1940 census).

Location: North-central portion of State.

County seat: Oroville.

References: State Mineralogist Report XV:XVII:XVIII:XXIV:XXVI (Oct., 1930):XXXI (Jan., 1936).

Butte County ranked twenty-seventh in regard to value of mineral output in 1944 with eleven different substances, having a total value of \$929,239 compared with \$755,968 in 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	464,858 lbs.	\$62,756
Gold -----	10,635 fine ozs.	372,225
Lead -----	56,209 lbs.	4,497
Silver -----	11,835	8,416
Stone, miscellaneous -----	-----	135,800
Zinc -----	2,954,519 lbs.	335,789
Unapportioned* -----	-----	9,756
Total value -----	-----	\$929,239

* Includes cadmium, chromite, mineral water.

CALAVERAS

Land area: 1027 square miles.

Population: 8,221 (1940 census).

Location: East-central portion of State—Mother Lode District.

County seat: San Andreas.

References: State Mineralogist Report XIV:XVII:XVIII:XIX:XX:XXI:XXXII (July, 1936):XXXV:XXXVII.

Calaveras County ranked seventeenth in California in regard to value of mineral output in 1944, with a total of \$2,642,638, as compared with \$2,831,543 in 1943.

Commercial production for 1944 consisted of twelve different substances, and was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	4,952,034 lbs.	\$668,524
Gold -----	1,933 fine ozs.	67,655
Lead -----	191,233 lbs.	15,298
Silver -----	58,018 fine ozs.	41,302
Stone, miscellaneous -----	-----	88,795
Zinc -----	2,172,165 lbs.	247,627
Unapportioned* -----	-----	1,513,437
Total value -----	-----	\$2,642,638

* Includes cement, chromite, clay (pottery), gems (quartz crystals), mineral water.

COLUSA

Land area: 1140 square miles.

Population: 9,788 (1940 census).

Location: Sacramento Valley.

County seat: Colusa.

References: State Mineralogist Report XIV:XVII:XVIII:XXV (April, 1929):XXXV.

Colusa County ranked fifty-seventh in regard to value of mineral output in 1944, with three different mineral substances, worth a total of \$14,491, as compared with \$93,486 in 1943.

Commercial production for 1944 consisted of chromite, manganese ore, and stone (miscellaneous).

CONTRA COSTA

Land area: 714 square miles.

Population: 100,450 (1940 census).

Location: East side of San Francisco Bay.

County seat: Martinez.

References: State Mineralogist Report XVII:XVIII:XXIII (Jan., 1927):XXXV.

Contra Costa County stands sixteenth on the list in respect to value of mineral output for 1944, with eight different substances worth \$3,244,179 as compared with \$4,284,821 in 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$942,406
Unapportioned* -----	2,301,773
Total value -----	\$3,244,179

* Includes brick and hollow tile, cement, mineral water, natural gas, quicksilver, silica (glass sand).

DEL NORTE

Land area: 1024 square miles.

Population: 4,745 (1940 census).

Location: Extreme northwest corner of State.

County seat: Crescent City.

References: State Mineralogist Report XIV : XVII : XXI (July, 1925) :XXIX (Jan.-April, 1933) :XXXIV :XXXV :XXXVII.

Del Norte County was in thirty-seventh place as to mineral production for 1944 with four different substances worth \$509,703, as compared with \$609,664 in 1943.

Commercial production in 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Chromite -----	11,040 long tons	\$491,141
Gold -----	3 fine ozs.	105
Stone, miscellaneous -----	----	17,748
Other minerals -----	----	709
Total value -----		\$509,703

EL DORADO

Land area: 1753 square miles.

Population: 13,229 (1940 census).

Location: East-central portion of the State, northernmost of the Mother Lode counties.

County seat: Placerville.

References: State Mineralogist Report XV:XVII:XVIII:XIX:XX:XXII (Oct., 1926) :XXXI:XXXIV (July, 1938) :XXXV:XXXVIII.

El Dorado, which contains the location where gold in California was first heralded to the world, comes forty-third on the list of counties ranked according to value for 1944, with nine different mineral substances worth \$298,859. In addition to the segregated figures here given, a large tonnage of limestone was formerly shipped for use in cement manufacture, the value being included in the State's total for cement. The 1943 output was valued at \$304,449.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Chromite -----	535 long tons	\$16,776
Copper -----	52,658 lbs.	7,109
Gold -----	82 fine ozs.	2,870
Silver -----	807 fine ozs.	574
Unapportioned* -----	----	271,530
Total value -----		\$298,859

* Includes limestone, lead, slate, stone, miscellaneous.

FRESNO

Land area: 5950 square miles.

Population: 178,565 (1940 census).

Location: South-central portion of State.

County seat: Fresno.

References: State Mineralogist Report XIV:XVII:XVIII:XXV (July, 1929) :XXXV:XXXVII.

Fresno County, third in importance as a mineral producer among the counties of California, reports an output for 1944 of twelve different mineral substances, with a total value of \$49,800,782, as compared with the 1943 value of \$41,039,427.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	155 fine ozs.	\$5,425
Natural gas -----	32,686,565 M cu. ft.	2,836,676
Petroleum -----	45,325,244 bbls.	46,159,669
Silver -----	18 fine ozs.	13
Stone, miscellaneous -----	-----	431,154
Tungsten ore -----	8,280 units	204,624
Unapportioned* -----	-----	163,221
Total value -----	-----	\$49,800,782

* Includes brick and hollow tile, chromite, clay (pottery), feldspar, granite.

GLENN

Land area: 1259 square miles.

Population: 12,195 (1940 census).

Location: West side of Sacramento Valley.

County seat: Willows.

References: State Mineralogist Report XIV:XVII:XVIII:XXXV:XXXVII.

Glenn County stands fifty-fifth as a mineral producing county of the State for 1944, and owes its position to the presence of large deposits of sand and gravel, much of which is used as railroad ballast, chromite, and natural gas.

Commercial production for 1944 totaled \$33,736 which is a decrease from \$915,030, the 1943 total.

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$30,512
Unapportioned* -----	3,224
Total value -----	\$33,736

* Includes chromite, manganese ore, natural gas.

HUMBOLDT

Land area: 3634 square miles.

Population: 45,812 (1940 census).

Location: Northwestern portion of State, bordering on Pacific Ocean.

County seat: Eureka.

References: State Mineralogist Report XIV:XVII:XVIII:XXI (July, 1925):XXXV:XXXVII (Oct., 1941).

Humboldt County ranked forty-first in the value of its mineral output among the counties of the State for 1944 with nine different mineral substances valued at \$373,525, compared with the 1943 output worth \$237,827.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	23 fine ozs.	\$895
Silver -----	2 fine ozs.	3
Stone, miscellaneous -----	-----	161,157
Unapportioned* -----	-----	211,566
Total value -----	-----	\$373,525

* Includes brick, chromite, clay (pottery), manganese ore, natural gas.

IMPERIAL

Land area: 4089 square miles.

Population: 59,740 (1940 census).

Location: Extreme southeast corner of the State.

County seat: El Centro.

References: State Mineralogist Report XIV:XVII:XVIII:XIX:XX:XXII (April, 1926):XXXIV-XXXVI (inc.), XXXVIII (April, 1942).

Imperial County ranks thirty-fourth in total value of mineral output for 1944, with nine different mineral substances, worth \$564,263, compared with \$685,203 for 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$89,690
Unapportioned* -----	474,573
Total value -----	\$564,263

* Includes calcium chloride, carbon dioxide, gypsum, manganese ore, mica schist, salt, kyanite, strontium.

INYO

Land area: 10,019 square miles.

Population: 7625 (1940 census).

Location: Lies on eastern border of State, north of San Bernardino County.

County seat: Independence.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXII (Oct., 1926) : XXVII : XXX : XXXIII : XXXIV (Oct., 1938) : XXXV-XXXVII (inc.).

Inyo County's mineral output for 1944 reached a total value of \$6,716,413, having eighteen different mineral substances and standing eleventh among the counties of the State as to value of production. The 1943 yield was worth \$8,025,406.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Bentonite -----	1,851 tons	\$24,910
Copper -----	557,286 lbs.	75,234
Gold -----	2,571 fine ozs.	89,985
Lead -----	10,060,151 lbs.	804,812
Pumice -----	12,956 tons	72,996
Talc -----	24,505 tons	356,108
Silver -----	411,003 fine ozs.	292,269
Stone, miscellaneous -----	-----	11,462
Zinc -----	1,294,165 lbs.	147,535
Unapportioned* -----	-----	4,841,102
Total value -----	-----	\$6,716,413

* Includes antimony, borates, limestone, marble, molybdenum ore, quicksilver, soda ash, tungsten ore.

KERN

Land area: 8003 square miles.

Population: 135,124 (1940 census).

Location: South-central portion of State.

County seat: Bakersfield.

References: State Mineralogist Report XIV:XVII:XVIII:XIX:XX:XXV (Jan., 1929):XXIX (July-Oct., 1933):XXX:XXXIV:XXXVII (inc.).

Kern County, because of its immensely productive oil fields, stands preeminent among all counties of California in the value of its mineral output. It was surpassed by Los Angeles and Orange counties in 1923, but by Los Angeles only in 1924-1943, for which petroleum is responsible. The 1944 production consisted of twenty different mineral substances valued at \$108,257,342, compared with the 1943 output worth \$94,245,359. Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery and oil well drilling) -----	152,237 tons	\$522,711
Gypsum -----	292,306 tons	394,356
Gold -----	1,291 fine ozs.	45,185
Lead -----	7,142 lbs.	571
Natural gas -----	72,111,360 M cu. ft.	3,786,075
Petroleum -----	92,694,311 bbls.	98,829,308
Silver -----	1,060 fine ozs.	754
Stone, miscellaneous -----	-----	222,606
Tungsten ore -----	306 units	7,390
Zinc -----	8,532 lbs.	973
Unapportioned* -----	-----	4,447,413
Total value -----	-----	\$108,257,342

* Includes antimony, bentonite, borates, brick, cement, copper, volcanic ash, salt, tin ore.

KINGS

Land area: 1559 square miles.

Population: 35,168 (1940 census).

Location: South-central portion of the State.

County seat: Hanford.

References: State Mineralogist Report IX:XVII:XVIII:XXVI (Oct., 1930):XXXV.

Kings County, previous to the discovery of Kettleman Hills oil fields in 1928, had little or no mineral output, but in 1929 it ranked seventh in total value of annual mineral production, seventh in 1930, 1938 and 1941-1942; third in 1931; eighth in 1936-1937, and 1943-1944; sixth in 1939.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas -----	63,648,158 M cu. ft.	\$3,294,746
Petroleum -----	9,459,556 bbls.	10,689,298
Total value -----	-----	\$13,984,044

LAKE

Land area: 1278 square miles.

Population: 8,069 (1940 census).

Location: About fifty miles north of San Francisco Bay and the same distance inland from the Pacific Ocean.

County seat: Lakeport.

References: State Mineralogist Report XIV:XVII:XVIII:XX:XXV (July, 1929):XXXIV:XXXV.

Lake County was in thirty-eighth place as to the value of mineral output for 1944, with four different mineral substances, worth \$468,389, compared with \$798,381 in 1943.

Commercial production in 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Mineral water -----	7,185 gals.	\$2,956
Quicksilver -----	3,781 flasks	430,317
Stone, miscellaneous -----	----	30,735
Other minerals -----	----	4,381
Total value -----		\$468,389

LASSEN

Land area: 4531 square miles.

Population: 14,479 (1940 census).

Location: Northeast portion of State.

County seat: Susanville.

References: State Mineralogist Report XV:XVII:XVIII:XIX:XXV (Jan., 1929):XXX:XXXII (Oct., 1936).

Lassen County was in fifty-sixth place as a mineral producer for 1944, with an output of \$26,495, compared with \$25,353 which was the value for the previous year.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$24,945
Other minerals -----	1,550
Total value -----	\$26,495

LOS ANGELES

Land area: 4067 square miles.

Population: 2,785,643 (1940 census).

Location: One of the southwestern coast counties.

County seat: Los Angeles.

References: State Mineralogist Report XV:XVII:XVIII:XIX:XX:XXIII (July, 1927):XXX:XXXIII (July, 1937):XXXIV:XXXVI.

The mineral production of Los Angeles County for the year 1944 amounted in value to \$108,138,154, as compared with the 1943 total worth \$100,688,245. Los Angeles led the counties of the State in total value of mineral output from 1923 to 1943, inclusive, but was passed by Kern in 1944.

Commercial production for 1944 consisted of thirteen substances and was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Brick and hollow tile -----	----	\$2,065,468
Clay (pottery and oil-well drilling) -----	61,640 tons	85,007
Gold -----	85 fine ozs.	2,975
Mineral water -----	11,563,991 gals.	383,317
Natural gas -----	52,806,375 M cu. ft.	3,843,357
Petroleum -----	88,646,069 bbls.	95,872,140
Silver -----	17 fine ozs.	12
Stone, miscellaneous -----	----	4,596,097
Unapportioned* -----	----	1,289,781
Total value -----		\$108,138,154

* Includes cement, diatomite, iodine, salt, titanium ore.

MADERA

Land area: 2112 square miles.

Population: 23,314 (1940 census).

Location: East-central portion of State.

County seat: Madera.

References: State Mineralogist Report XIV:XVII:XVIII:XXIV (Oct., 1928):XXX:XXXI:XXXIV:XXXVII:XXXVIII.

Madera County was in fifty-fourth place as a mineral producer for 1944, with an output of nine different mineral substances valued at \$74,141, compared with \$55,575 for 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	72,221 lbs.	\$9,750
Gold -----	20 fine ozs.	700
Silver -----	180 fine ozs.	128
Unapportioned* -----	----	63,563
Total value -----	-----	\$74,141

* Includes mineral paint, natural gas, pumice and volcanic ash, stone (miscellaneous), tungsten ore.

MARIN

Land area: 529 square miles.

Population: 52,907 (1940 census).

Location: Adjoins San Francisco on the north.

County seat: San Rafael.

References: State Mineralogist Report XIV:XVII:XVIII:XXII (July, 1926):XXIX:XXXV.

Marin County had forty-second place as to the value of mineral output for 1944, with five different mineral substances. The total was \$312,849, compared with \$280,119 in 1943.

Commercial production included clay (pottery), mineral water, manganese ore, crushed rock, and sand and gravel.

MARIPOSA

Land area: 1453 square miles.

Population: 5,605 (1940 census).

Location: Most southerly of the Mother Lode counties. East central portion of State.

County seat: Mariposa.

References: State Mineralogist Report XIV:XVII:XVIII:XXIV (April, 1928):XXXI (Jan., 1935):XXXV:XXXVII.

Mariposa County is one of the distinctly *mining* counties of the State, although it stands but twenty-fifth on the list of counties in regard to the value of its mineral output for 1944, with a total of \$1,306,411, as compared with \$443,693 for 1943. Mariposa County also has been the source of a large tonnage of limestone, which was otherwise credited to cement manufacture in Merced County.

Commercial production with eight different mineral substances for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	182,799 lbs.	\$24,678
Gold -----	5,489 fine ozs.	192,115
Lead -----	255,657 lbs.	20,453
Silver -----	115,608 fine ozs.	82,210
Zinc -----	6,688,655 lbs.	762,507
Unapportioned* -----	----	224,448
Total value -----	-----	\$1,306,411

* Includes barite, silica (quartz), and stone (miscellaneous).

MENDOCINO

Land area: 3452 square miles.

Population: 27,864 (1940 census).

Location: Joins Humboldt County on the south and bounded by the Pacific Ocean on the west.

County seat: Ukiah.

References: State Mineralogist Report XIV:XVII:XVIII:XIX:XX:XXXV.

Mendocino County's mineral output for 1944 was valued at \$152,039 which gave it rank of forty-seventh among the counties of the State as a mineral producer with \$82,480 for 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$68,701
Unapportioned* -----	83,338
Total value -----	\$152,039

* Includes carbon dioxide, manganese ore, natural gas.

MERCED

Land area: 1995 square miles.

Population: 46,988 (1940 census).

Location: About the geographical center of the State.

County seat: Merced.

References: State Mineralogist Report XIV:XVII:XVIII:XXI (April, 1925):XXXI (Jan., 1935):XXXV.

Merced County ranked twenty-ninth as to the value of mineral output for 1944, with four different mineral substances worth \$853,905, compared with \$1,118,313 for 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	5 fine ozs.	\$175
Stone, miscellaneous -----	---	204,011
Other minerals -----	---	649,719
Total value -----		\$853,905

MODOC

Land area: 3823 square miles.

Population: 8,713 (1940 census).

Location: The extreme northeast corner of the State.

County seat: Alturas.

References: State Mineralogist Report XV:XVII:XVIII:XXV (Jan., 1929):XXX:XXXII (Oct., 1936):XXXV.

Modoc County in forty-fifth place for 1944 reported a commercial production as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$220,204
Other minerals -----	35,025
Total value -----	\$255,229

MONO

Land area: 3030 square miles.

Population: 2,299 (1940 census).

Location: Is bordered by the State of Nevada on the east and is about in the central portion of the State measured on a north and south line.

County seat: Bridgeport.

References: State Mineralogist Report XV:XVII:XVIII:XX:XXIII (Oct., 1927):XXX:XXXIV:XXXV:XXXVI (April, 1940):XXXVII:XXXVIII.

Mono County is forty-eighth with nine different mineral substances, and reported a commercial production for 1944 as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	9 fine ozs.	\$315
Silver -----	3 fine ozs.	2
Stone, miscellaneous -----	----	15,969
Unapportioned* -----	----	106,887
Total value -----	-----	\$123,173

* Includes pumice, quicksilver, andalusite, pyrophyllite, tungsten ore.

MONTEREY

Land area: 3330 square miles.

Population: 73,032 (1940 census).

Location: West-central portion of State, bordering on Pacific Ocean.

County seat: Salinas.

References: State Mineralogist Report XV:XVII:XVIII:XIX:XXI (Jan., 1925):XXXI:XXXIV:XXXV.

Monterey County had seven different mineral substances during 1944, having a total value of \$4,942,121, as compared with \$1,142,800 for 1943. In the year's total, of the county, is included the value of magnesia, produced prior to 1944, but not previously reported.

In fifteenth place, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$414,595
Unapportioned* -----	4,527,526
Total value -----	\$4,942,121

* Includes dolomite, magnesia, quicksilver, salt, sandstone, silica (glass sand).

NAPA

Land area: 783 square miles.

Population: 28,503 (1940 census).

Location: Directly north of San Francisco Bay—one of the 'bay counties.'

County seat: Napa.

References: State Mineralogist Report XIV:XVII:XVIII:XX:XXV (April, 1929):XXXV.

In 1944 the value of Napa County's mineral output was \$709,686, placing it in thirtieth place on the list of counties, as compared with \$948,557 for 1943.

With seven different mineral substances, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Quicksilver -----	1,176 flasks	\$128,570
Unapportioned * -----	----	581,116
Total value -----		\$709,686

* Includes asbestos, chromite, mineral water, pumice, stone (miscellaneous).

NEVADA

Land area: 974 square miles.

Population: 19,283 (1940 census).

Location: North of Lake Tahoe on the eastern border of the State.

County seat: Nevada City.

References: State Mineralogist Report XVI:XVII:XVIII:XIX:XX:XXVI (April, 1930):XXXI:XXXII:XXXV:XXXXVI (July, 1941).

Nevada County, one of the mountain counties of California, for some years alternated with Amador in the gold lead, but both were passed by Yuba in 1918-1921, also 1923 and 1943. In 1922, 1924, 1929 to 1942, Nevada led all counties in gold output, though it held third place in 1925, 1928, and 1944; and second place in 1926, 1927, and 1943. Nevada County stands thirty-second on the list of counties in regard to value of its mineral output for 1944, with ten different mineral substances, worth \$619,179, as compared with \$890,647 for 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	16,029 fine ozs.	\$561,015
Silver -----	12,752 fine ozs.	9,068
Stone, miscellaneous -----	----	30,150
Unapportioned * -----	----	18,946
Total value -----		\$619,179

* Includes barite, chromite, copper, lead, manganese ore, tungsten ore.

ORANGE

Land area: 795 square miles.

Population: 130,760 (1940 census).

Location: Southwest portion of the State, bordering Pacific Ocean.

County seat: Santa Ana.

References: State Mineralogist Report XV:XVII:XVIII:XIX:XX:XXI (Jan., 1925):XXXI:XXXV:XXXVII.

Orange County, in fourth place as to value of mineral output for 1944, produced twelve mineral substances worth \$33,312,154 compared with \$28,068,896 in 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery) -----	34,627 tons	\$140,316
Gold -----	51 fine ozs.	1,785
Lead -----	36,464 tons	2,917
Natural gas -----	16,704,577 M cu. ft.	1,119,308
Petroleum -----	30,417,719 bbls.	31,227,748
Silver -----	16,318 fine ozs.	11,604
Stone, miscellaneous -----	----	774,797
Zinc -----	98,279 lbs.	11,203
Unapportioned * -----	----	22,476
Total value -----		\$33,312,154

* Includes copper, mineral water, salt.

PLACER

Land area: 1395 square miles.

Population: 28,108 (1940 census).

Location: Eastern border of State directly west of Lake Tahoe.

County seat: Auburn.

References: State Mineralogist Report XV:XVII:XVIII:XIX:XX:XXIII (July, 1927):XXXI:XXXII (Jan., 1936).

Placer County, in forty-sixth place, with nine different mineral substances was valued at \$250,237, as compared with \$277,238 in 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Chromite -----	512 long tons	\$24,184
Gold -----	407 fine ozs.	14,245
Silver -----	401 fine ozs.	285
Stone, miscellaneous -----	----	8,973
Unapportioned * -----	----	202,550
Total value -----	-----	\$250,237

* Includes asbestos, brick and hollow tile, clay (pottery), granite.

PLUMAS

Land area: 2594 square miles.

Population: 11,548 (1940 census).

Location: Northeastern border of State, south of Lassen County.

County seat: Quincy.

References: State Mineralogist Report XVI:XVII:XVIII:XIX:XX:XXIV (Oct., 1928):XXIX:XXX:XXXIII (April, 1937):XXXVII.

Plumas County's mineral output for 1944 with five different mineral substances was valued at \$78,714, as compared with \$207,509 in 1943.

In fifty-third place, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Chromite -----	70 long tons	\$2,808
Gold -----	121 fine ozs.	4,235
Silver -----	24 fine ozs.	17
Stone, miscellaneous -----	----	16,765
Other minerals -----	----	54,889
Total value -----	-----	\$78,714

RIVERSIDE

Land area: 7240 square miles.

Population: 105,524 (1940 census).

Location: Southern portion of State.

County seat: Riverside.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXV (Oct., 1929):XXX:XXXI:XXXIV-XXXVII (inc.).

Riverside is the fourth county in the State in size and the fourteenth in regard to the total value of mineral output for 1944. Within its borders are included mountains, desert, and agricultural land. In point of variety Riverside County showed thirteen different mineral substances commercially produced in 1944 with a total value of \$5,203,973, as compared with the 1943 output which was valued at \$5,452,740.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery) -----	74,650 tons	\$197,478
Stone, miscellaneous -----	----	1,416,644
Unapportioned * -----	----	3,589,851
Total value -----	-----	\$5,203,973

* Includes brick and hollow tile, cement, fluorspar, granite, gypsum, limestone, manganese ore, mineral water, silica (glass sand), tungsten ore.

SACRAMENTO

Land area: 983 square miles.

Population: 170,333 (1940 census).

Location: North-central portion of State.

County seat: Sacramento.

References: State Mineralogist Report XV :XVII :XVIII :XX :XXI (Jan., 1925) :XXXI.

Sacramento stands tenth among the counties of the State as a mineral producer; the output for 1944 being valued at \$7,832,687, as compared with the 1943 production, worth \$6,588,998. In regard to gold output alone, this county ranks second, being exceeded by Yuba, the Sacramento product coming from the dredges. With seven different mineral substances, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	23,789 fine ozs.	\$832,615
Natural gas -----	72,644,058 M cu. ft.	5,490,344
Silver -----	1,118 fine ozs.	795
Stone, miscellaneous -----	----	1,390,227
Other minerals -----	----	118,706
Total value -----	-----	\$7,832,687

SAN BENITO

Land area: 1392 square miles.

Population: 11,392 (1940 census).

Location: West-central portion of State.

County seat: Hollister.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXII (April, 1926) : XXXIV : XXXV.

San Benito County ranked twenty-first among the counties in regard to the value of total mining production for 1944, having an output worth \$1,985,039, as compared with \$3,528,462 for the previous year.

Commercial output for 1944 included chromite, dolomite, quick-silver, sand, gravel, and crushed rock.

SAN BERNARDINO

Land area: 20,157 square miles.

Population: 161,108 (1940 census).

Location: Southeastern portion of State.

County seat: San Bernardino.

References: State Mineralogist Report XV :XVII :XVIII :XIX : XXVI (July, 1930) : XXVII (July, 1931) : XXX : XXXIV : XXXVIII (inc.) : XXXIX (Oct., 1943).

San Bernardino, by far the largest county in the State in area, ranked seventh in regard to the value of mineral output for 1944, with a total of \$23,358,596, as compared with \$22,042,939, the total for 1943.

San Bernardino, for many years (except for 1918), has led all other counties in the State in point of variety of minerals, producing commercially in 1944 a total of thirty-one different substances.

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery) -----	3,873 tons	\$31,716
Copper -----	390,634 lbs.	52,736
Gold -----	919 fine ozs.	32,165
Limestone -----	387,485 tons	633,063
Lead -----	299,278 lbs.	23,942
Manganese ore -----	2,802 long tons	67,075
Silica (quartz and glass sand) -----	29,151 tons	107,442
Talc -----	36,395 tons	417,343
Silver -----	27,249 fine ozs.	19,377
Stone, miscellaneous -----	-----	924,910
Zinc -----	235,448 lbs.	26,841
Unapportioned * -----	-----	21,021,986
Total value -----	-----	\$23,358,596

* Includes bentonite, borates, brick, bromine, calcium chloride, cement, feldspar, granite, iron ore, lithia, mineral paint, mineral water, potash, salt, salt cake, soda ash, strontium, tungsten ore.

SAN DIEGO

Land area: 4221 square miles.

Population: 289,348 (1940 census).

Location: Extreme southwest corner of State.

County seat: San Diego.

References: State Mineralogist Report XIV:XVII:XVIII:XIX:XX:XXI (July, 1925):XXX:XXXV (Jan., 1939):XXXVI-XXXVII.

San Diego ranked twenty-second in the total value of its mineral output for the year 1944 with eleven different mineral substances on the commercial list. The value for 1944 was \$1,985,032, as compared with the 1943 output worth \$1,650,586.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	2 fine ozs.	\$70
Silver -----	2 fine ozs.	1
Stone, miscellaneous -----	-----	1,629,510
Unapportioned * -----	-----	355,451
Total value -----	-----	\$1,985,032

* Includes brick, bromine, granite, magnesia, mineral water, salt, tubemill pebbles.

SAN FRANCISCO

Land area: 46½ square miles.

Population: 634,536 (1940 census).

County seat: San Francisco.

References: State Mineralogist Report XVII:XVIII:XX:XXV (April, 1929):XXXV:XXXVII.

Surprising as it may appear at first glance, San Francisco County is listed among the mineral-producing sections of the State, actual production consisting mainly of crushed rock, sand, gravel, mineral water and gold and silver from beach sands.

In forty-ninth place, commercial production for 1944 had a total value of \$120,000 and was miscellaneous stone.

SAN JOAQUIN

Land area: 1448 square miles.

Population: 134,207 (1940 census).

Location: Central portion of State.

County seat: Stockton.

References: State Mineralogist Report XIV : XVII : XVIII : XXI (April, 1925).

San Joaquin County reported a mineral production for 1944 having a total value of \$1,369,198, as compared with \$1,621,661 for 1943.

In twenty-fourth place, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas -----	11,337,469 M cu. ft.	\$798,908
Miscellaneous stone -----	----	286,017
Unapportioned * -----	----	284,273
Total value -----		\$1,369,198

* Includes brick and hollow tile, manganese ore, gold, silver.

SAN LUIS OBISPO

Land area: 3334 square miles.

Population: 33,246 (1940 census).

Location: Bordered by Kern County on the east and the Pacific Ocean on the west.

County seat: San Luis Obispo.

References: State Mineralogist Report XV : XVII : XVIII : XXI (Oct., 1925) :XXXI (Oct., 1935) :XXXV :XXXVII.

The total value of the mineral production of San Luis Obispo County in 1944, with seven different mineral substances, was \$704,818, as compared with \$1,037,062 in 1943.

In thirty-first place, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Manganese ore -----	725 long tons	\$33,302
Quicksilver -----	921 flasks	104,760
Stone, miscellaneous -----	----	40,043
Unapportioned * -----	----	526,713
Total value -----		\$704,818

* Includes chromite, mineral water, petroleum, volcanic ash.

SAN MATEO

Land area: 447 square miles.

Population: 111,782 (1942 census).

Location: Peninsula, adjoined by San Francisco on the north.

County seat: Redwood City.

References: State Mineralogist Report XVII :XVIII :XXV (April, 1929) :XXIX :XXXV.

San Mateo County had a mineral output in 1944 of five different substances, having a total value of \$2,452,525, as compared with \$3,041,434, the value for 1943.

In twentieth place, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$189,322
Unapportioned* -----	2,263,203
Total value -----	\$2,452,525

* Includes cement, limestone (shells), and magnesium compounds.

SANTA BARBARA

Land area: 2740 square miles.

Population: 70,555 (1940 census).

Location: Southwestern portion of State, adjoining San Luis Obispo on the south.

County seat: Santa Barbara.

References: State Mineralogist Report XV:XVII:XVIII:XIX:XXI (Oct., 1925):XXXII:XXXV.

Santa Barbara County owes its position of sixth place in the State in regard to its mineral output to the presence of productive oil fields within its boundaries. The total value of its mineral production during the year 1944 was \$23,908,079, as compared with \$16,830,725, the output for 1943.

With eight different substances, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas -----	5,901,658 M cu. ft.	\$389,032
Petroleum -----	21,298,935 bbls.	21,012,512
Stone, miscellaneous -----	----	164,950
Unapportioned* -----	----	2,341,585
Total value -----	-----	\$23,908,079

* Includes brick, clay (pottery), diatomite, quicksilver.

SANTA CLARA

Land area: 1328 square miles.

Population: 174,949 (1940 census).

Location: West-central portion of State.

County seat: San Jose.

References: State Mineralogist Report XVII:XVIII:XXIXXXVI (Jan., 1930):XXIX:XXXV.

Santa Clara County reported a mineral output for 1944 of \$5,288,668 as compared with \$8,128,250, the figure for 1943.

In thirteenth place, with ten mineral substances, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Limestone (part shells) -----	82,925 tons	\$223,851
Stone, miscellaneous -----	----	520,464
Unapportioned* -----	----	4,484,353
Total value -----	-----	\$5,228,668

* Includes brick, cement, clay (pottery), magnesite, manganese ore, petroleum, quicksilver.

SANTA CRUZ

Land area: 435 square miles.

Population: 45,057 (1940 census).

Location: Bordering Pacific Ocean, just south of San Mateo County.

County seat: Santa Cruz.

References: State Mineralogist Report XVII:XVIII:XXII (Jan., 1926):XXIX.

The mineral output of Santa Cruz County amounted to a total of \$1,762,807 for 1944, giving the county a standing of twenty-third among all others in the State in this regard. The 1943 figure was \$2,900,752.

Commercial production for 1944 included bituminous rock, cement, iron ore, limestone, and miscellaneous stone.

SHASTA

Land area: 3858 square miles.

Population: 28,800 (1940 census).

Location: North-central portion of State.

County seat: Redding.

References: State Mineralogist Report XIV:XVII:XVIII:XIX:XXII (April, 1926):XXIX (Jan., April, 1933):XXX:XXXIV:XXXV (April, 1939):XXXVI.

Shasta County stood eighteenth in California among the mineral-producing counties in 1944, with an output valued at \$2,615,373, as compared with the 1943 production worth \$3,766,717.

With thirteen different mineral substances, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Chromite -----	398 long tons	\$18,974
Copper -----	2,585,656 lbs.	349,063
Gold -----	1,796 fine ozs.	62,860
Lead -----	500,509 lbs.	40,041
Silver -----	99,765 fine ozs.	70,944
Stone, miscellaneous -----	-----	543,504
Zinc -----	3,013,340 lbs.	343,521
Unapportioned* -----	-----	1,186,466
Total value -----	-----	\$2,615,373

* Includes asbestos, iron ore, manganese ore, mineral water, pyrite.

SIERRA

Land area: 923 square miles.

Population: 3,025 (1940 census).

Location: Eastern border of State just north of Nevada County.

County seat: Downieville.

References: State Mineralogist Report XVI:XVII:XVIII:XX:XXV (April, 1929):XXXI:XXXVIII (Jan., 1942).

Sierra County reported a mineral production of \$114,195 in 1944, which was mainly gold, as compared with the 1943 output worth \$176,016.

In fiftieth place, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$9,900
Other minerals* -----	104,295
Total value -----	\$114,195

* Includes chromite, gold, silver.

SISKIYOU

Land area: 6256 square miles.

Population: 28,598 (1940 census).

Location: Extreme north-central portion of State, next to Oregon boundary.

County seat: Yreka.

References: State Mineralogist Report XIV:XVII:XVIII:XIX:XX:XXI (Oct., 1925):XXVIII (Jan., 1931):XXIX:XXX:XXXI (July, 1935):XXXIV:XXXV:XXXVII.

Siskiyou, fifth county in California in regard to size, located in highly mineralized and mountainous country, ranks nineteenth in regard to mineral output with nine mineral substances for 1944. The 1943 production was valued at \$1,896,246.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Chromite -----	2,225 long tons	\$89,650
Copper -----	15,856,568 lbs.	2,140,637
Gold -----	3,682 fine ozs.	128,870
Silver -----	14,348 fine ozs.	10,203
Stone, miscellaneous -----	----	96,369
Unapportioned* -----	----	42,192
Total value -----		\$2,507,921

* Includes manganese ore, mineral water, pumice.

SOLANO

Land area: 822 square miles.

Population: 49,118 (1940 census).

Location: Touching San Francisco Bay on the northeast.

County seat: Fairfield.

References: State Mineralogist Report XIV:XVII:XXIII (April, 1927):XXXV.

Solano, while mostly valley land, produced mineral substances during 1944 to the total value of \$5,973,575, ranking it in twelfth place among the counties of the State, compared with the 1943 output worth \$4,931,944.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas -----	70,526,204 M cu. ft.	\$5,872,446
Other minerals -----	----	101,129
Total value -----		\$5,973,575

SONOMA

Land area: 1577 square miles.

Population: 69,052 (1940 census).

Location: South of Mendocino County, bordering on the Pacific Ocean.

County seat: Santa Rosa.

References: State Mineralogist Report XIV:XVII:XVIII:XXII (July, 1926):XXXV.

Sonoma County ranked twenty-eighth among the counties of California during 1944 with a mineral output valued at \$905,121, compared with \$1,521,314, the 1943 figure.

Commercial production for 1944 included chromite, granite (tuff), limestone (shells), mineral water, manganese ore, quicksilver, and miscellaneous stone.

STANISLAUS

Land area: 1450 square miles.

Population: 74,866 (1940 census).

Location: Center of State bounded on south by Merced County.

County seat: Modesto.

References: State Mineralogist Report XIV:XVII:XVIII:XXI (April, 1925):XXXV.

Gold has usually been the chief mineral product of Stanislaus County, but it was exceeded in 1918-1919 and 1944 by manganese, and in 1921-1923, 1925-1934 and 1943 by miscellaneous stone. This county for 1944 ranked thirty-fifth in the State in regard to minerals, with an output valued at \$545,376, as compared with \$1,112,486 in 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	5,066 fine ozs.	\$177,310
Manganese ore -----	5,711 long tons	213,293
Silver -----	180 fine ozs.	128
Stone, miscellaneous -----	----	97,931
Unapportioned* -----	----	56,714
Total value -----		\$545,376

* Includes clay (pottery), magnetite, natural gas.

SUTTER

Land area: 608 square miles.

Population: 18,680 (1940 census).

Location: Bounded by Butte County on the north and Sacramento on the south.

County seat: Yuba City.

References: State Mineralogist Report XV:XVII:XVIII.

Sutter is one of only two counties in the State which for a number of years reported no commercial output of some kind of mineral substance. In 1917 some crushed rock was taken out, from the Marysville Buttes, also in 1925-1928, and 1937-1938.

There has been some utilization of natural gas and clay. Coal is found here, but no deposits of it have been placed on a productive basis.

During 1944 there was a commercial output of pottery clay, natural gas, and sand and gravel, having a total value of \$89,246, which ranked it fifty-second as a mineral-producing county. The 1943 total was \$74,905.

TEHAMA

Land area: 2893 square miles.

Population: 14,316 (1940 census).

Location: North-central portion of the State, bounded on the north by Shasta.

County seat: Red Bluff.

References: State Mineralogist Report XV : XVII : XVIII : XIV : XXIV (July, 1928) :XXXVII.

Tehama County stood fifty-first among the mineral-producing counties of the State for 1944, with an output valued at \$101,823, compared with \$72,917 in 1943. Commercial production in 1944 was chromite, crushed rock, sand and gravel.

TRINITY

Land area: 3166 square miles.

Population: 3970 (1940 census).

Location: Northwestern portion of State.

County seat: Weaverville.

References: State Mineralogist Report XIV :XVII:XVIII:XIX: XX : XXII (Jan., 1926) : XXIX (Jan., April, 1933) : XXX : XXXIV :XXXV :XXXVII (Jan., 1941).

Trinity County's output of minerals was valued at \$516,066 for 1944, as compared with the 1943 figure of \$323,123, which gives the county a rank of thirty-sixth for the year.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	550 fine ozs.	\$19,250
Manganese ore -----	9,753 long tons	367,960
Silver -----	56 fine ozs.	40
Stone, miscellaneous -----	---	13,341
Unapportioned* -----	---	115,475
Total value -----		\$516,066

* Includes chromite, coal, quicksilver.

TULARE

Land area: 4856 square miles.

Population: 107,152 (1940 census).

Location: Bounded by Inyo on the east, Kern on the south, Fresno on the north.

County seat: Visalia.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXXVI : XXXVII.

Tulare County stands thirty-third on the list of mineral-producing counties for 1944, with six different mineral substances, having a total value of \$615,630, as compared with \$301,292 for 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$170,681
Unapportioned* -----	444,949
Total value -----	\$615,630

* Includes brick, gems (quartz crystals), natural gas, tungsten ore.

TUOLUMNE

Land area: 2190 square miles.

Population: 10,887 (1940 census).

Location: East-central portion of State—Mother Lode District.

County seat: Sonora.

References: State Mineralogist Report XIV:XVII:XVIII:XIX:XX:XXIV (Jan., 1928):XXXIV:XXXV:XXXVII.

Tuolumne County ranks thirty-ninth among the counties of the State relative to its total value of mineral output for 1944, with nine different substances. The mineral production for 1944 was valued at \$465,734, as compared with \$783,508 for 1943.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	13,993 lbs.	\$1,889
Gold -----	5,796 fine ozs.	202,860
Silver -----	2,852 fine ozs.	2,028
Unapportioned * -----	-----	258,957
Total value -----	-----	\$465,734

* Includes chromite, dolomite, limestone, soapstone, stone (miscellaneous).

VENTURA

Land area: 1878 square miles.

Population: 69,685 (1940 census).

Location: Southwestern portion of State, bordering on Pacific Ocean.

County seat: Ventura.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXI:XXVIII (July-Oct., 1932):XXXVII.

Ventura is fifth in the State in respect to the value of its mineral output for 1944. The 1944 mineral production was worth \$30,545,897, as compared with the 1943 output valued at \$25,080,976.

With seven different mineral substances, commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas -----	53,179,388 M cu. ft.	\$3,245,920
Petroleum -----	23,797,902 bbls.	26,792,447
Stone, miscellaneous -----	-----	345,962
Unapportioned * -----	-----	161,568
Total value -----	-----	\$30,545,897

* Includes clay (oil-well drilling), gypsum, limestone.

YOLO

Land area: 1017 square miles.

Population: 27,243 (1940 census).

Location: Sacramento Valley, bounded by Sutter on the east and Colusa on the north.

County seat: Woodland.

References: State Mineralogist Report XIV:XVII:XVIII:XXXV.

Yolo County in fortieth place, had a commercial production for 1944 as follows, compared with \$365,176 the preceding year:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$52,724
Unapportioned * -----	341,575
Total value -----	\$394,299

* Includes natural gas and quicksilver.

YUBA

Land area: 639 square miles.

Population: 17,034 (1940 census).

Location: Lies west of Sierra and Nevada counties; south of Plumas.

County seat: Marysville.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXVI (July, 1930) :XXXI.

Yuba County ranked twenty-sixth among the counties of the State as a mineral producer in respect to gold, which is obtained mainly by dredges. The 1943 output was valued at \$1,734,670.

Commercial production for 1944 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	27,853 fine ozs.	\$974,855
Silver -----	1,367 fine ozs.	972
Stone, miscellaneous -----	----	130,484
Total value -----		\$1,106,311

CHAPTER EIGHT

DIRECTORY OF PRODUCERS OF METALLIC AND NON-METALLIC MINERALS IN CALIFORNIA 1944

NOTE.—The producers of natural gas and petroleum will be found in the quarterly Summary of Operations, California Oil Fields, for July to December, 1944 (Vol. 30. No. 2).

ASBESTOS

Operator	Product	Address	Location of mine
<i>Napa County</i> Kohler & Chase, Geo. Q. Chase	a	26 O'Farrell St., San Francisco	Steel Canyon
<i>Placer County</i> Joe Delmuc & W. Zindars Gold Meadow Mining & Milling Co., Dr. John W. Ross	b *b	Forest Hill 2322 K St., Sacramento	Forest Hill Forest Hill
<i>San Benito County</i> Jack Simas	*a	2232 11th Ave., Oakland	Hernandez
<i>Shasta County</i> Powhatan Mining Co.	b	Woodlawn, Baltimore, Md.	Simas

* Under development only.

a Chrysotile short fiber.

b Tremolite.

BARYTES

Operator	Address	Location of mine
<i>Mariposa County</i> Baroid Sales Division, National Lead Co.	830 Ducommun St., Los Angeles	El Portal
<i>Nevada County</i> Industrial Minerals & Chemical Co., Spanish Mine	836 Gilman St., Berkeley	Washington

BENTONITE (FULLER'S EARTH)

Operator	Address	Location of pit
<i>Inyo County</i> Coen Companies, Inc. Commercial Minerals Co. Los Angeles Chemical Co. Muroc Clay Co.	711 Gibbons St., Los Angeles 310 Irving St., San Francisco 1960 Santa Fe Ave., Los Angeles 5525 Randolph St., Maywood	----- ----- ----- Olancha
<i>Kern County</i> Muroc Clay Co.	5525 Randolph St., Maywood	Muroc
<i>San Bernardino County</i> Baroid Sales Division, National Lead Co. Pacific Bentonite Mine, Louis Martinez	830 Ducommun St., Los Angeles Box 374, Red Mountain	Hector Red Mountain
<i>San Diego County</i> Standard Oil Co. of Calif.	Standard Oil Bldg., San Francisco	Palm Siding

BITUMINOUS ROCK

Operator	Address	Location of mine
<i>Santa Cruz County</i> Calrock Asphalt Co.	232 Montgomery St., San Francisco	Majors

BORATES

Operator	Address	Location of property
<i>Inyo County</i> Pittsburgh Plate Glass Co., Columbia Chemical Division United States Borax Co.	523 W. 6th St., Los Angeles 510 W. 6th St., Los Angeles	Bartlett Death Valley
<i>Kern County</i> Pacific Coast Borax Co.	510 W. 6th St., Los Angeles	Kramer
<i>San Bernardino County</i> American Potash and Chemical Corp. West End Chemical Co.	Trona Latham Square Bldg., Oakland	Trona West End

BROMINE

Operator	Address	Location of property
<i>Alameda County</i> Westvaco Chlorine Prod. Corp.	405 Lexington Ave., New York, N. Y.	Newark
<i>San Bernardino County</i> American Potash & Chem. Co.	Trona	Trona
<i>San Diego County</i> Westvaco Chlorine Prod. Corp.	405 Lexington Ave., New York, N. Y.	San Diego

CADMIUM

Mine	Operator	Address	Location of mine
<i>Butte County</i> Big Bend-----	Hoefling Bros.-----	Box 786, Sacramento-----	Oroville

CALCIUM CHLORIDE

Operator	Address	Location of mine
<i>Imperial County</i> Mullet Island Salt Works-----	Niland-----	Niland
<i>San Bernardino County</i> California Rock Salt Co.-----	2465 Hunter St., Los Angeles-----	Amboy

CARBON DIOXIDE GAS

Operator	Address	Location of wells
<i>Imperial County</i> Cardox Western, Inc.----- National Dry Ice Co.*----- Natural Carbonic Prod., Inc.**-----	748 Washington Blvd., Los Angeles 21----- 1225 E. 8th St., Los Angeles----- 748 E. Washington Blvd., Los Angeles-----	Niland Niland Niland
<i>Mendocino County</i> Caldri Ice Corp.-----	1168 Battery St., San Francisco-----	Hopland

* Was taken over by Cardox Western, Inc., on August 1, 1944.
 ** Ceased operating plant June 30, 1944.

CEMENT

Operator	Address	Location of mill
<i>Calaveras County</i> Calaveras Cement Co.....	315 Montgomery St., San Francisco.....	San Andreas
<i>Contra Costa County</i> Henry Cowell Lime and Cement Co.....	2 Market St., San Francisco.....	Cowell
<i>Kern County</i> Monolith Portland Cement Co.....	Bartlett Bldg., Los Angeles.....	Monolith
<i>Los Angeles County</i> Blue Diamond Corp.....	1650 S. Alameda St., Los Angeles.....	Los Angeles
<i>Merced County</i> Yosemite Portland Cement Co.**.....	Merced.....	Merced
<i>Riverside County</i> Riverside Cement Co.....	621 S. Hope St., Los Angeles.....	Riverside
<i>San Benito County</i> Pacific Portland Cement Co.*.....	417 Montgomery St., San Francisco.....	San Juan
<i>San Bernardino County</i> California Portland Cement Co.....	601 W. Fifth St., Los Angeles.....	Colton
<i>Riverside County</i> Riverside Cement Co.....	621 South Hope St., Los Angeles.....	Oro Grande
<i>Southwestern Portland Cement Co.</i>	503 Roosevelt Bldg., Los Angeles.....	Victorville
<i>San Mateo County</i> Pacific Portland Cement Co.....	417 Montgomery St., San Francisco.....	Redwood City
<i>Santa Clara County</i> Permanente Cement Co.....	Latham Square Bldg., Oakland.....	Permanente
<i>Santa Cruz County</i> Santa Cruz Portland Cement Co.....	Crocker Bldg., San Francisco.....	Davenport

* Shipment from cement made in 1943.

** Liquidated in 1944.

CHROMITE

Principal Producers in 1944 Out of a Total of 101 Operating Properties

Mine	Operator	Address	Location of mine
<i>Del Norte County</i>			
Big Dipper	Tyson Chrome Mines, Inc.	406 Montgomery St., San Francisco	Crescent City
Blue Bird	J. E. Eckett & H. D. Miller	Cave Junction, Oregon	Crescent City

STONE, MISCELLANEOUS

Under the heading of 'miscellaneous stone' there are four divisions—crushed rock, grinding mill pebbles, paving blocks, and sand and gravel. Crushed rock includes crushed rock that is used in macadam, ballast and for concrete; also rock used for rubble and riprap.
NOTE.—The California State Highway Commission, the various counties, U. S. Forest Service and U. S. Bureau of Public Roads produce both crushed rock and sand and gravel in various places in the State used in construction and maintenance of highways, but not specified in this listing.

APPENDIX

PUBLIC RESOURCES CODE

An act to establish a Public Resources Code, thereby consolidating and revising the law relating to natural resources, the conservation, utilization, and supervision thereof, and matters incidental thereto, and to repeal certain acts and parts of acts specified herein.

Chapter 93 (Stats. 1939.)

The people of the State of California do enact as follows:

GENERAL PROVISIONS

1. This act shall be known as the Public Resources Code.
2. The provisions of this code, in so far as they are substantially the same as existing provisions relating to the same subject matter shall be construed as restatements and continuations thereof and not as new enactments.
3. All persons who, at the time this code goes into effect, hold office under any of the acts repealed by this code, which offices are continued by this code, continue to hold the same according to the former tenure thereof.
4. No action or proceeding commenced before this code takes effect, and no right accrued, is affected by the provisions of this code, but all procedure thereafter taken therein shall conform to the provisions of this code so far as possible.
5. Unless the context otherwise requires, the general provisions hereinafter set forth shall govern the construction of this code.
6. Division, part, chapter, article, and section headings contained herein shall not be deemed to govern, limit, modify or in any manner affect the scope, meaning, or intent of the provisions of any division, part, chapter, article, or section hereof.
7. Whenever, by the provisions of this code, an administrative power is granted to a public officer or a duty imposed upon such officer, the power may be exercised or the duty performed by a deputy of the officer or by a person authorized pursuant to law.
8. Writing includes any form of recorded message capable of comprehension by ordinary visual means. Whenever any notice, report, statement or record is required by this code, it shall be made in writing in the English language.
9. Whenever any reference is made to any portion of this code or of any other law of this State, such reference shall apply to all amendments and additions thereto now or hereafter made.
10. "Section" means a section of this code unless some other statute is specifically mentioned.
11. The present tense includes the past and future tenses; and the future the present.
12. The masculine gender includes the feminine and neuter.
13. The singular number includes the plural, and the plural the singular.
14. "County" includes "city and county."
15. "Shall" is mandatory and "may" is permissive.
16. "Oath" includes affirmation.
17. "Signature" or "subscription" includes mark when the signer or subscriber can not write, such signer's or subscriber's name being written near the mark by a witness who writes his own name near the signer's or subscriber's name; but a signature or subscription by mark can be acknowledged or can serve as a signature or subscription to a sworn statement only when two witnesses so sign their own names thereto.
18. If any provision of this code, or the application thereof to any person or circumstances, is held invalid the remainder of the code, and the application of its provisions to the other persons or circumstances, shall not be affected thereby.

DIVISION 1. THE DEPARTMENT OF NATURAL RESOURCES

501. There is in the State government a Department of Natural Resources. The department shall be conducted under the control of an executive officer known as the Director of Natural Resources. The director shall be appointed by and hold office at the pleasure of the Governor and shall receive a salary of six thousand dollars a year.

502. Except as in this division otherwise provided, the provisions of Article 2, Chapter 3, Title 1, Part 3 of the Political Code shall govern and apply to the conduct of the Department of Natural Resources in every respect the same as if such provisions were herein set forth at length, and wherever in that article the term "head of the department" or similar designation occurs, it shall for the purposes of this division mean the Director of Natural Resources.

503. For the purposes of administration the department shall be organized by the director, subject to the approval of the Governor, in such manner as he deems necessary properly to segregate and conduct the work of the department. The director may appoint, in accordance with the civil service and other provisions of law, such deputies, officers, and other expert and clerical assistants as may be necessary.

504. The work of the department shall be divided into at least four divisions, known as Division of Forestry, the Division of Parks, The Division of Fish and Game, and The Division of Mines.

505. The Division of Forestry shall be administered through a chief who shall be known as the State Forester. He shall be a technically trained forester, appointed by the director upon nomination by the State Board of Forestry. General policies for the guidance of the Division of Forestry shall be determined by a State Board of Forestry which shall consist of seven members appointed by and holding office at the pleasure of the Governor. Of the seven members one shall be familiar with the pine timber industry, one with the redwood industry, one with live stock industry, one with general agriculture, and one with the problems of water conservation.

506. The Division of Parks shall be administered through a chief who shall be appointed by the director upon nomination by the State Park Commission. General policies for the administration of the State park system shall be determined by the State Park Commission which shall consist of five members appointed by and holding office at the pleasure of the Governor.

507. The Division of Minerals shall be administered through a chief who shall be known as the State Mineralogist. He shall be a technically trained mining engineer, appointed by the director upon nomination by the State Mining Board. General policies for the guidance of the Division of Mines shall be determined by a State Mining Board, which shall consist of five members appointed by and holding office at the pleasure of the Governor.

508. The Division of the Department of Natural Resources for the supervision of oil and gas shall be in charge of a chief, known as the State Oil and Gas Supervisor.

509. The salaries of the chiefs of the Divisions of Forestry and Parks shall be fixed by the director with the approval of the Governor. The director and the chief of each division, before entering upon his duties, shall execute and deliver to the State an official bond in the sum of twenty-five thousand dollars conditioned upon the faithful performance of his duties.

510. The members of the Board of Forestry and the State Park Commission shall serve without compensation, but shall be entitled to their actual necessary expenses incurred in the performance of their duties.

512. The Department of Natural Resources may expend the money in any appropriation or in any special fund in the State treasury made available by law for the administration of the statutes the administration of which is committed to the department, or for the use, support, or maintenance of any board, bureau, commission, department, office, or officer whose duties, powers, and functions have been transferred to and conferred upon the department. Such expenditures by the department shall be made in accordance with law in carrying out the purposes for which the appropriations were made or the special funds created.

513. The department shall have possession and control of all records, books, papers, offices, equipment, supplies, moneys, funds, appropriations, land and other

property, real or personal held for the benefit or use of all bodies, offices, and officers whose duties, powers, and functions have been transferred to and conferred upon the department.

514. Nothing in this code is intended to supersede, modify or change the effect of the enactment of section 373g of the Political Code, and wherever in this code reference is made to any officer or agency of the Department of Natural Resources, it is made in the sense and with the same legal effect as was attributable thereto in the statute whence derived and which would continue to be so attributable but for the adoption of this code.

DIVISION 2. MINES AND MINING

CHAPTER 1. DEFINITIONS

2001. Unless the context otherwise requires, the definitions hereinafter set forth shall govern the construction of Division 2 of this code.

2002. "Department" in reference to the government of this State, means the Department of Natural Resources.

2003. "Division" in reference to the government of this State, means the Division of Mines in the Department of Natural Resources.

2004. "Person" includes any individual, firm, association, corporation, or any other group or combination acting as a unit.

CHAPTER 2. THE DIVISION OF MINES

2200. For the purposes of this chapter "mine" includes all mineral bearing properties of whatever kind or character, whether underground, quarry, pit, well, spring or other source from which any mineral substance is or may be obtained. "Mineral" for the purposes of this chapter includes all mineral products both metallic and nonmetallic, solid, liquid or gaseous, and mineral waters of whatever kind or character.

2201. The State Mineralogist shall employ competent geologists, field assistants, qualified specialists, and office employees when necessary in the execution of the plans and operations of the division under this chapter and shall fix their compensation.

2202. The State Mineralogist shall maintain offices, and a museum, library, and laboratory in San Francisco for the purposes provided in this chapter.

2203. The State Mineralogist shall make a biennial report to the Governor on or before the fifteenth day of September next preceding the regular session of the Legislature.

2204. The State Mineralogist may receive on behalf of this State, for the use and benefit of the division, gifts, bequests, devices, and legacies of real or other property and may use the same in accordance with the wishes of the donors. If no instructions are given by the donors, the State Mineralogist shall manage, use, and dispose of the gifts, bequests, and legacies for the best interests of the division and in such manner as he may deem proper.

2205. The State Mineralogist shall:

(a) Make, facilitate, and encourage special studies of the mineral resources and mineral industries of the State.

(b) Collect statistics concerning the occurrence and production of the economically important minerals and the methods pursued in making their valuable constituents available for commercial use.

(c) Make a collection of typical geological and mineralogical specimens, especially those of economic and commercial importance such collection constituting the museum of the division.

(d) Provide a library of books, reports, and drawings bearing upon the mineral industries, the sciences of mineralogy and geology, and the arts of mining and metallurgy, such library constituting the library of the division.

(e) Make a collection of models, drawings, and descriptions of the mechanical appliances used in mining and metallurgical processes.

(f) Preserve and so maintain such collections and library as to make them available for reference and examination, and open to public inspection at reasonable hours.

(g) Maintain, in effect, a bureau of information concerning the mineral industry of this State to consist of such collections and library, and arrange, classify, catalogue, and index the data therein contained, in a manner to make the information available to those desiring it.

(h) Issue from time to time such bulletins as he may deem advisable concerning the statistics and technology of the mineral industries of this State.

2206. The State Mineralogist may prepare a special collection of ores and minerals of California to be sent to or used at any world's fair or exposition in order to display the mineral wealth of the State.

2207. The owner, lessor, lessee, agent, manager, or other person in charge of any mine of whatever kind or character within the State shall forward to the State Mineralogist, upon his request, at his office, not later than the thirty-first day of March in each year, a detailed report upon forms which will be furnished showing the character of the mine, the number of men employed, the method of working the mine and the general condition thereof, and the total mineral production for the past year. He shall also furnish any additional information relative to such mine that the State Mineralogist may from time to time require for the proper discharge of his official duties. Any such person who fails to comply with the provisions of this section is guilty of a misdemeanor.*

2208. The State Mineralogist or a qualified assistant may at any time enter or examine any and all mines, quarries, wells, mills, reduction works, refining works, and other mineral properties or working plants in this State in order to gather data to comply with the provisions of this chapter.

2209. The State Mineralogist may fix a price upon and dispose of to the public all publications of the division, including reports, bulletins, maps, registers, or other publications. The price shall approximate the cost of publication and distribution. He may also furnish the publications of the division to public libraries without cost and may exchange publications with geological surveys, scientific societies, and other like bodies.

2210. All money received by the division from sales of publications issued by the division shall be deposited at least once each month in the State treasury to the credit of the Division of Mines revolving printing fund, which fund is continued in existence. This fund is appropriated for the use of the division, in addition to such other funds as may be appropriated for the printing and publishing of reports, bulletins, and maps issued by the division. The State Controller may require financial reports from the division or any officer thereof.

(Added by Stats. 1939, Ch. 96, as part of codification.)

* Sec. 19 of the Penal Code of California provides: "Except in cases where a different punishment is prescribed by this code, every offense declared to be a misdemeanor is punishable by imprisonment in a county jail not exceeding six months, or by a fine not exceeding five hundred dollars, or both."

PUBLICATIONS OF THE DIVISION OF MINES

During the past sixty-four years, in carrying out the provisions of the organic act creating the former California State Mining Bureau, there have been published many reports, bulletins and maps which go to make up a library of detailed information on the mineral industry of the State, a large part of which could not be duplicated from any other source.

One feature that has added to the popularity of the publications is that many of them have been distributed without cost to the public, and even the more elaborate ones have been sold at a price which barely covers the cost of printing.

Owing to the fact that funds for the advancing of the work of this department have usually been limited, the reports and bulletins mentioned are printed in limited editions many of which are now entirely exhausted.

Copies of such publications are available for reference, however, in the offices of the Division of Mines, in the Ferry Building, San Francisco; State Building, Los Angeles; State Office Building, Sacramento; Redding; and Division of Oil and Gas at Santa Barbara, Santa Paula, Taft, Bakersfield, Coalinga. They may also be found in many public, private and technical libraries in California and other states and foreign countries.

A catalog of all publications from 1880 to 1917, giving a synopsis of their contents, is issued as Bulletin No. 77.

Publications in stock may be obtained postpaid by addressing the San Francisco, Los Angeles or Sacramento offices and enclosing the requisite amount.

Remittances of stamps in an amount not to exceed 26 cents, currency or coin will be accepted at sender's risk. Payment is preferred in the form of money orders.

Money orders should be made payable to the Division of Mines.

Write for latest revised price list.

NOTE.—The Division of Mines frequently receives requests for some of the early Reports and Bulletins now out of print, and it will be appreciated if parties having such publications and wishing to dispose of them will advise this office.

Chapters of Report XXXVII, 1941 (quarterly) titled "California Journal of Mines and Geology," containing the following:		
January, 1941. Mineral Resources of Trinity County; Strategic Minerals Procurement; Geologic Investigation of the Chromite Deposits of California; United States Supreme Court Renders Far-reaching Decision on Power Permits on "Navigable" Streams; Securities and Exchange Commission -----	Price \$0.60, sales tax \$0.02	.62
April, 1941. Tungsten Resources of California; Geological Progress of State Division of Mines; California Earthquakes of Mission Period, 1769-1838; Marketing of Talc, Pyrophyllite and Ground Soap-Stone -----	Price \$0.60, sales tax \$0.02	.62
July, 1941. Nevada Co. report and map-----	Price \$0.60, sales tax \$0.02	.62
October, 1941. Humboldt County report. Tin in California; California Quicksilver Program by the U. S. Geological Survey; Recent Tungsten Developments; Manganese and Chrome Ore Specifications and Prices; Does Scheelite always Fluoresce? Bentonite-----	Price \$0.60, sales tax \$0.02	.62

REPORTS—Continued

	Price (including postage and sales tax)
Asterisks (**) indicate the publication is out of print.	
Chapters of Report XXXVIII , 1942 (quarterly), titled "California Journal of Mines and Geology," containing the following:	
January, 1942. Sierra County report. Chromium in California-----	
Price \$0.60, sales tax \$0.02	\$0.62
April, 1942. Imperial County report and map. Geology and Mineral Deposits of Cargo Muchacho Mountains ---Price \$0.60, sales tax \$0.02	.62
July-October, 1942. Contact Metamorphic Rocks of the Twin Lakes Region; Tabulated List of Tungsten Properties; Geology of Welsh Tungsten Prospect, Madera Co.; Tungsten Deposits in Confidence Mining District, Tuolumne Co.; Ghost Canyon Tungsten Claims, Madera Co.; Hot Springs Deposits, Coso Mountains; Biennial Report of State Mineralogist; includes map showing Tungsten Properties in California -----Price \$1.20, sales tax \$0.03	1.23
Chapters of Report XXXIX , 1943 (quarterly), titled "California Journal of Mines and Geology," containing the following:	
January, 1943. (Santa Cruz County report and map.) Current Notes on mining Activities in Strategic Minerals. Organization and Service of Division of Mines. Dept. of Interior Information Service by U. S. Geological Survey. Tom Cat, Tungsten Property, Tulare Co. -----	
Price \$0.60, sales tax \$0.02	.62
April, 1943. Manganese Discovery in San Mateo County. Current Activities in Strategic Minerals. Clerbus-Mae Tungsten Prospect, Trinity County. Mylonites of Eastern San Gabriel Mountains. Geology and Tungsten of Sierra Nevada N. E. of Visalia, Tulare County. Geology of San Benito Quadrangle, with map. Lithium. Quartz -----	
Price \$0.60, sales tax \$0.02	.62
July, 1943. Carbon Dioxide, Mendocino and Southern Sonoma Counties. Current Activities in Strategic Minerals. Crestmore Minerals. Isometrograph as Developed and Used at New Idria Mine. Sutter (Marysville) Gas Field. Sillimanite Group of Minerals. New Federal and State Legislation -----Price \$0.60, sales tax \$0.02	.62
October, 1943. San Bernardino County report and map. Current Notes on Activity in Strategic Minerals Biennial Report of State Mineralogist -----	
Price \$0.60, sales tax \$0.02	.62
Chapters of Report XL , 1944 (quarterly), titled "California Journal of Mines and Geology," containing the following:	
January, 1944. Geology of Palm Springs-Blyth, Riverside County. Geology of Parts of Barstow Quadrangle, San Bernardino County. Geology of Needles-Goffs Region, San Bernardino County. Airox Concrete Aggregate. Marketing Magnesite and Allied Products -----	
Price \$0.60, sales tax \$0.02	.62
Yearly subscriptions, \$2.00, sales tax, \$0.05, \$2.05; payable in advance.	

BULLETINS

**Bulletin No. 1. Description of Some Desiccated Human Remains , by Winslow Anderson. 1888, 41 pp., 6 illustrations-----	
**Bulletin No. 2. Methods of Mine Timbering , by W. H. Storms. 1894, 58 pp., 75 illustrations-----	
**Bulletin No. 3. Gas and Petroleum Yielding Formations of Central Valley of California , by W. L. Watts. 1894, 100 pp., 13 illustrations, 4 maps-----	
**Bulletin No. 4. Catalogue of California Fossils , by J. G. Cooper, 1894, 73 pp., 67 illustrations. (Part I was published in the Seventh Annual Report of the State Mineralogist, 1887)-----	
**Bulletin No. 5. The Cyanide Process , 1894, by Dr. A. Scheidel. 140 pp., 46 illustrations-----	
**Bulletin No. 6. California Gold Mill Practices , 1895, by E. B. Preston, 85 pp., 46 illustrations-----

Imperial Co. Map , accompanying report on mines and mineral resources of Imperial County in April, 1942, Chapter of Report XXXVIII, sold separately -----	Price .10
Tungsten Properties in California , accompanying July-October, 1942, Chapter of Report XXXVIII (showing California geology uncolored), sold separately -----	Price \$0.60, sales tax \$0.02 .62
Santa Cruz Co. Map , accompanying report on mines and mineral resources of Santa Cruz County in January, 1943, Chapter of Report XXXIX, sold separately -----	Price \$0.15, sales tax \$0.01 .16
San Benito Quadrangle Geologic Map , accompanying report on geology of area in April, 1943, Chapter of Report XXXIX, sold separately -----	Price \$0.40, sales tax \$0.01 .41
San Bernardino County Map , accompanying report on mines and mineral resources of San Bernardino County in October, 1943, Chapter of Report XXXIX, sold separately -----	Price \$0.15, sales tax \$0.01 .16
Manganese Deposits (showing California geology uncolored), accompanying Bulletin 125, sold separately -----	Price \$0.60, sales tax \$0.02 .62

DETERMINATION OF MINERAL SAMPLES

Samples (limited to two at one time) of any mineral found in the State may be sent to the Division of Mines for identification, and the same will be classified free of charge. No samples will be determined if received from points outside the State. It must be understood that no assays, or quantitative determinations will be made. Samples should be in lump form if possible, and marked plainly with name of sender on outside of package, etc. No samples will be received unless delivery charges are prepaid. A letter should accompany sample, giving locality where mineral was found and the nature of the information desired.

OIL AND GAS FIELD MAPS

The following maps are on sale at the State Division of Oil and Gas, Ferry Building, San Francisco, and the various branch offices. The maps are revised as development work advances and ownerships change. Price includes postage and sales tax.

No.	Price
1—Sargent, Santa Clara County-----	\$0.75
2—Santa Maria, including Cat Canyon — Los Alamos, Santa Barbara County-----	1.25
3—Santa Maria, including Casmalia and Lompoc, Santa Barbara County--	1.25
4—Brea Olinda and East Coyote, Los Angeles, Orange Counties-----	1.25
6—Salt Lake—Beverly Hills, Los Angeles County-----	1.25
7—Sunset, including San Emidio, Kern County-----	1.25
8—South Midway, including Buena Vista Hills, Kern County-----	1.25
9—North Midway and McKittrick, Kern and San Luis Obispo Counties-----	1.25
10—South Belridge and McKittrick-Temblor oil fields, Kern County-----	1.25
11—Lost Hills and North Belridge, including Antelope Hills, Kern County---	1.25
12—Devils Den, Kern County-----	1.00
13—Kern River and Kern Front fields, including portion of Poso Creek field, Kern County-----	1.00
14—Coalinga and East Coalinga Extension, Fresno County-----	1.50
15—Elk Hills, Kern County-----	1.25
16—Ventura-Ojai, Ventura County-----	1.25
17—Santa Paula-Ojai, including South Mountain, Ventura County-----	1.25
18—Sespe-Piru-Simi, including Bardsdale, Ventura County-----	1.50
18a—Newhall, Aliso Canyon, Newhall-Potrero, Del Valle and Oak Canyon, Los Angeles County-----	1.25
19—Arroyo Grande, San Luis Obispo County-----	1.00
20—Long Beach, Los Angeles County-----	1.75
21B—District 5, boundaries of areas including oil fields, Fresno, Kings and Kern Counties-----	1.00
21C—District 4, boundaries of areas including oil fields, Kern, Kings and Tulare Counties-----	1.25
22—District 3, boundaries of areas including oil fields, Santa Barbara County	.75
23—District 2, boundaries of areas including oil fields, Ventura County-----	1.00
24—District 1, boundaries of areas including oil fields, Los Angeles and Orange Counties-----	1.00
26—Huntington Beach, Orange County-----	1.50
27—Santa Fe Springs, Los Angeles County-----	1.25
28—Torrance, Los Angeles County-----	1.25
28a—Townlot area, Torrance field, Los Angeles County-----	.75
29—Dominguez, Los Angeles County-----	1.00
30—Rosecrans, Los Angeles County-----	1.25
31—Inglewood, Los Angeles County-----	1.25
32—Seal Beach, Los Angeles and Orange Counties-----	1.25
33—Rincon, Ventura County-----	1.50
34—Mt. Poso and Poso Creek, Kern County-----	1.00

OIL AND GAS FIELD MAPS—Continued

<i>No.</i>	<i>Price</i>
35—Round Mountain, Kern County-----	\$1.00
36—Kettleman North Dome and Middle Dome, Fresno and Kings Counties--	1.50
37—Montebello, Los Angeles County-----	1.00
38—Whittier, Los Angeles County-----	1.25
39—West Coyote Oil Field, Los Angeles and Orange Counties-----	1.25
40—Elwood, Goleta (abandoned), La Goleta (gas), Santa Barbara County--	1.25
41—Potrero, Los Angeles County-----	1.00
42—Playa del Rey, Los Angeles County-----	1.50
43—Capitan, Santa Barbara County-----	1.00
44—Mesa, Santa Barbara County-----	1.50
46—Richfield, Orange County-----	1.25
48—Mountain View and Edison, Kern County-----	1.25
49—Fruitvale, Kern County-----	1.00
50—Wilmington, Los Angeles County-----	1.25
51—Santa Maria Valley, Santa Barbara County-----	1.00
52—El Segundo and Lawndale, Los Angeles County-----	1.50
53—Rio Bravo and Greeley, Kern County-----	1.00
54—Wasco oil field, Buttonwillow and Semitropic (gas), Kern County-----	1.25
55—Canal, Canfield Ranch, Coles Levee, Strand, Ten Section, Kern County--	1.25
56—Paloma, Kern County-----	1.25
57—Rio Vista (gas), Sacramento, Solano, and Contra Costa Counties-----	1.00
58—Trico Gas, Kern, Kings and Tulare Counties-----	1.00
59—Raisin City, Helm and Riverdale, including Wheatville area, Fresno County -----	1.25
